The Colorado Alliance
of Research Libraries

Alliance

Love Open Access

- Open access journals are not free to produce (someone pays somewhere)
- However, open access is wonderful
 - Free to the end user
 - Increased use of these titles
 - Promotes scholarly research in developed as well as third world countries

Some Open Access Problems

- Definition of “open access” journals
- No definitive listing of titles is available
- For that matter what is the definition of a journal
- Indexing and Abstracting
- ERM challenges
- Link resolution problems
 - Article-level linking

Definition of Open Access

Lund University – Directory of Open Access Journal

- We define open access journals as journals that use a funding model that does not charge readers or their institutions for access. From the BOAI definition [1] of "open access" we take the right of users to "**read, download, copy, distribute, print, search, or link to the full texts of these articles**" as mandatory for a journal to be included in the directory. [1]
<http://www.earlham.edu/~peters/fos/boaifaq.htm#openaccess>
- **Quality Control:** The journal must exercise peer-review or editorial quality control to be included.
- **Research Journal:** Journals that report primary results of research or overviews of research results to a scholarly community.
- **Periodical:** A serial appearing or intended to appear indefinitely at regular intervals, generally more frequently than annually, each issue of which is numbered or dated consecutively and normally contains separate articles, stories, or other writings.

Gold Rush Electronic Serials Mgmt System

- Created by non-profit Colorado Alliance of Research Libraries (<http://grweb.coalliance.org>)
 - Electronic Resource Management (ERM)
 - Link Resolution
 - Public search interface (A-Z)
 - Content Comparison
- Includes many of the major open-access title lists
- Collaborative building of metadata and title lists with participating libraries
- Currently has 80 different open access lists of which DOAJ is only one

Janus Head	1524-2269	Directory of Open Access Journals	LUND UNIVERSITY

OA and Digital Repositories

- Expect an exponential flood of OA titles with the growth of institutional repositories
- Digital Repositories can sometimes muddy the definition of a journal
- Libraries need to make sure that these projects:
 - Expose these new titles to search engines
 - Provide article-level linking with published algorithms (e.g. OpenURL 1.0 linking)
 - Consider contributing content to CrossRef
 - Make access policies clear

No definitive list

- Lund DOAJ – 2452 titles as of 11/6/2006
- Specialized lists from different organizations and specialties will include titles missed in the Lund directory. For example in Gold Rush:
 - Geoscience Open Access list created by the Colorado School of Mines has 50 titles – 38 of which are **NOT** in the Lund DOAJ

Indexing/Abstracting

- Many OA titles are not well covered in traditional indexing/abstracting service
- This varies by discipline
- However, greater numbers being picked-up as their continuation and impact are improving

ERM Issues

- Since these are not traditional paid for subscriptions, per se, do you want to track them in your ERMS?
 - Some open access titles are hybrid. Selected articles are free or some have a moving wall of when open access kicks in
 - Is your institution paying page or article charges to publish in an open access journal. Who is paying and should this be tracked?
 - Open access titles are still copyrighted and what limitations may exist. How do you let your patrons know?

Access & Link Resolution

- Does the OA title allow article-level linking?
- If so, is there a published algorithm so your link resolver can drill from a source (e.g. indexing/abstracting service) to that article
- It would be good if more OA titles were included in CrossRef - provides article-level DOIs to journals
 - Many smaller publishers of OA titles may not be aware CrossRef or be able to afford inclusion

Final Thoughts

- Be sure to include OA titles in your A-Z lists, link resolution and ERM system as appropriate to your mission
- If you are starting a digital repository follow good practices if you are hosting an OA journal title
- Encourage OA producers to get their titles included in CrossRef

Final Thoughts

- With the U.S. Federal Government and other governments beginning to demand that publicly funded research should have their content open access we should:
 - Encourage publishers to get their OA articles specially tagged in CrossRef as free
 - Make sure that open access projects and journals include their content in CrossRef
 - “CrossRef encourages organizations which operate institutional repositories to assign DOIs to their original non-duplicative works.”

Enriching GoldRush with core subject Open Access journals: Motives and methods

Heather Whitehead

Introduction

- CSM curriculum and users
- Bibliographer project
 - Collect OA titles in core subjects
- GoldRush e-journal server: CSM lists loaded
 - Geosciences
 - Applied Sciences and Engineering
 - Chemistry

Motives

- Promote quality, overlooked journals
- Support OA publishers
- Add to GoldRush “Public Access Resources” data
- Improve OA full text links from subscribed databases
- Subject-based resource aggregation with CSM as supplier - credibility

Methods: Criteria

- Quality
 - Peer reviewed/scholarly
 - Reputable supplier
 - Reasonable backfile
 - Content appropriate for our user community
- Accessibility
 - Stable, minimal downtime
 - No access restrictions
 - English language
 - ISSN

Methods: Harvesting

- DOAJ, BMC, Highwire Open Access, etc.
- Ulrich's
- Subject listservs
- Web searches
- Leads from literature

Evaluate quality of OA titles

- Compare CSM title lists to core subject bibliographic database
 - GoldRush staff mode, **Compare 2 Databases** feature
 - Applied Science and Engineering: *Compendex[®]* and/or *INSPEC[®]*
 - Chemistry: *SciFinder Scholar[®]*
 - Geoscience: *GeoRef[®]*
- Results

OA title coverage in core subject databases

Evaluate project: 60 new OA titles

Discussion

- Pattern differences
 - Geoscience
 - Applied science, chemistry

List maintenance (~annual)

- Look for new titles
- Look for added ISSNs
- Review current titles
 - Still OA? Still meet criteria?
- Send to Alliance for upload

Problems and issues

- Data problems – e.g., bad/mismatched ISSNs, titles not tagged OA, or tagged but not really OA
- Inconsistent naming (“open” in database title would assist retrieval)
- “Hybrid” databases: some titles OA, some not

Plans

- Considering OA lists for environmental science, materials and metallurgy
- Contributions from other Alliance libraries?
- OA Conference Proceedings – is anyone collecting these?

E-LIS: **the Open Archive for Library and Information Science** **<http://eprints.rclis.org/>**

Heather Morrison
E-LIS Editor, Canada

What is E-LIS?

- Open access archive for library and information studies
- Free for searching and for depositing
- Over 4,300 documents
- Peer-reviewed research, conference proceedings, working papers, and more
- Charleston 2006 conference proceedings

E-LIS Overview

- Founded in 2003
- Volunteer collaboration
- Editors from 45 countries (October 2006)
- Hosted by AEPIC Team, CILEA (Italy)
- GNU E-Prints Software Version 2.3.3
- Supports 22 languages / interface in 5 languages

E-LIS US Team

Norm Medeiros

Thomas Krichel

Nestor Ostorio

Contact info: <http://eprints.rclis.org/staff.html>

Why use E-LIS for searching?

- Access to more
 - Documents
 - For many, E-LIS greatly expands access to LIS literature
 - E-LIS means access to more, even for librarians at the wealthiest libraries
 - Broader perspective – many languages, many cultures
- High quality metadata and advanced search capability

Why use E-LIS? Authors

- Impact / citations
- Preservation
- Gather your work!
- Find your work...
 - In the office
 - At home
 - At a conference
- A URL for your article to send to anyone

Author's E-LIS: Rick Johnson, SPARC (Scholarly Publishing and Research Coalition)

Why use E-LIS? Authors

- Share your work
 - Subscriptions = unequal access:
 - City university library
 - Small-town college library
 - Rural public library
 - Library in developing country
- Evidence Based Practice
- Become an expert – so you can help your faculty!
- Download statistics

Author stats: *The Dramatic Growth of Open Access*

Morrison, Heather (2006) The dramatic growth of open access : implications and opportunities for resource sharing. *Journal of Interlibrary Loan, Document Delivery & Electronic Reserve* 16(3). <http://eprints.rclis.org/archive/00004558/>

Conclusions

- Open Access Resources substantial and growing
- DOAJ: over 2,400 titles
- Gold Rush: 80 Open Access lists
- OAIster: close to 10 million items from over 700 repositories (not all fulltext)

Conclusions for librarians

- We connect people and information resources
 - Some resources are purchased
 - Some resources are open access
- We build collections by selecting & preserving resources
 - We add the same value to purchased & OA resources
- We can share our own work, too
