PREFACE TO THE EXPURGATED EDITION

Information which might reveal the identity of the persons or organizations with which the study is most directly concerned has been omitted or altered in this expurgated edition. Maps, photographs, tables, numbers, dates, quotations, references to the literature, personal and geographic details, have been deleted or altered where appropriate.

The original edition of the study has been lodged with the University Librarian and may not be consulted without the writer's written permission.
ABSTRACT

The argument is pursued that the social structure of a suburban high school in South Africa can be related to the racial policy of the central government, the mores of the residents of the suburb, and the career ambitions of school teachers. Data collected, mainly by means of observer participation, in the suburb and in the school, is adduced in support of the argument.

Description proceeds from the general to the particular: from a broad overview of race-relations in the suburb to a portrayal of the school as a facilitating mechanism in the process of passing for White, thence to a discussion of the effects of this involvement on the formal and informal structure of the teaching staff.

The socio-economic and cultural affinity between the suburb's Whites and Coloureds permits of the emergence of cross-cutting loyalties between the two groups based on the socio-economic categories of "respectable" and "roff" rather than on colour and provides a favourable environment for pass-Whites.

Passing for White is not an act essentially different from the wider process of upward social mobility as found among the Coloured people. It is not an act but a process involving anticipatory socialization and the creation of conditions of face-to-face segmentary interaction in which Whites might make ad hoc decisions which cumulatively add verisimilitude to the passer's claim to White status.

Passers find in White schools one of the segmentary roles necessary for their purpose; passing is and has been for some decades endemic to many schools in South Africa.

The Principal of the school on which this study focuses enrolls to his school pass-Whites "acceptable to the community." He does so in
response to a declining White enrolment, to pressures exerted by a relatively "colour-blind" community, and to pressures exerted by a school board which makes use of the school as a "buffer" institution. At the same time, for fear of having the school reclassified "Coloured" by the provincial educational bureaucracy, he attempts to exclude the "obviously" Coloured—even when they have White identity cards and the support of the school board.

Compounding the Principal's tribulations is the disparate social-class backgrounds of teachers and pupils which provide grounds for disputes over the goals of vocational and regulatory training and the means whereby these goals are to be attained. Disciplinary problems ensue, the school's extra-curriculum withers away, and the school class—the members of which owe no allegiance to houses, clubs or societies such as might cut across their allegiance to the class—becomes the pre-eminent unit of social structure in the school. Teachers, deprived of the means par excellence of dividing and ruling their pupils (the creation and manipulation of cross-cutting allegiances) face in the classroom a solidary body of pupils united in their opposition to middle-class adult authority; this fact further compounds the school's ill-repute.

Association with a pass-White and working-class school imperils the career ambitions of teachers so difficulty is experienced in attracting recruits to the teaching staff and in moderating their rate of turnover. A marked cleavage develops between transient recruits and long-term teachers. Long-term teachers, prevented for various reasons from quitting the school, experience frustration and indulge in perennial scapegoating activity. The Principal, caught between opposing pressures exerted by parents, teachers and arms of government, forfeits the
respect of his teachers and loses ground in his battle with the Vice-
Principal for ascendancy over the staff.

INTRODUCTION

As early as 1932 Waller, in his as yet unrivalled study of schools as organizations, argued persuasively that the vulnerability of schools to environmental pressures intimately affects their structures. His thesis has gained widespread acceptance but it has not received as much attention as it merits. Of the 109 works cited in Bidwell's masterly review and bibliography of the sociology of education a mere 11 are listed as dealing directly with school/community relations. Floud and Halsay, in their excellent bibliography of 762 works in the sociology of education, list a mere 19 under the rubric of "schools in relation to society and community." This thesis contributes towards a redressing of the balance. An attempt is made to relate the social structure of Undersuburb High School of Undersuburb, Cape Town, to the racial policy of the central government, to the mores of the people of Undersuburb, and to the occupational ambitions of school teachers. Description proceeds from the general to the particular: from a broad overview of race-relations in Undersuburb to a portrayal of the high school as a facilitating mechanism in the process of passing for White, and thence to a discussion of the effects of this involvement on the formal and informal structure of the teaching staff.

The South African government's well-known policy of apartheid, exemplified in legislation which discriminates against non-White peoples in the parliamentary franchise, in public amenities, housing, employment

and freedom of movement, is in accord with the educational philosophy of apologists for Christelik-Nasionale Onderwys (Christian-National Education), whose views are succinctly epitomized in the assertion: "We want no mixing of languages, no mixing of cultures, no mixing of religions, and no mixing of races." The ideal of segregated schooling for different ethnic and linguistic groups has been vigorously pursued by the government and is embodied in substantial legislation: Whites, Coloureds, and Africans must, by law, attend different schools, as must English-speaking and Afrikaans-speaking children. Nevertheless, there remain in South Africa some schools whose scholars are racially and linguistically heterogeneous. This study focuses upon one such school—Undersuburb High School, the only White English-medium high school in Undersuburb elucidates reasons for its dissimilarity to the ideal envisaged in Christelik-Nasionale Onderwys. It constitutes the first published intimate account of the impact of race-relations on a South African complex organization, and is one of the very few case-studies dealing with the social structure of a school.5

Undersuburb was once a prestigious English-speaking suburb but, with the encroachment of industry in the early twentieth century, working class Whites poured in—many of them Afrikaans-speaking railway workers—and, during and after the Second World War, the lower-lying

5J. Floud and A. H. Halsay, op. cit., list a mere eight publications under the rubric of "Schools as Social Systems."
parts of the area were populated by *Coloureds* (Eurafricans) of "the better class." Relations between *Whites* and *Coloureds* in Undersuburb have always been cordial. Socio-economic and cultural affinity among *working-class Whites* and "better class" *Coloureds*, and the fact that most Undersuburbers are of similar indeterminate complexion, has blurred the colour line and encouraged Undersuburbers to differentiate amongst themselves in terms of the socio-economic categories "rough" and "respectable" rather than in terms of *White* and *Coloured*. This observation has no parallel in the vast literature of South African race-relations.  

*Coloureds* who desire to *pass for White* find Undersuburb an exceptionally favourable location for their enterprise, and many *pass-White* children enrol to nominally-*White* Undersuburb High School. The topic of *passing for White* has been largely ignored and its importance grossly underestimated in the not inconsiderable literature on the *Cape Coloured people*. Chapter II is one of the lengthiest treatments of the topic yet published; the voluminous material on mixed schooling, presented in Chapter III, has never before been collated; the detailed

6For an introduction to this literature the reader can do no better than to consult Pierre van den Berghe's *South Africa: a Study in Conflict*, Middletown, Wesleyan University Press, 1956, and the select bibliography contained therein.

There is no lengthy treatment of *passing for White* in non-fictional volumes on South Africa, but the topic is dealt with cursorily by C. Dover, *Half-Caste*, London, Secker and Warburg, 1937; *Report of the
examination of how the administrators of Undersuburb High School attempt to cope with the influx of pass-White scholars is the first of its kind.

Chapter IX provides--for the first time--a theoretical framework in which such material can be considered. It is argued that the White and the pass-White must be perceived as a team. The pass-White presents himself to the White in such manner that the White cannot be altogether sure that he is of Coloured origin. The White has to decide whether or not to accept the pass-White as a member of his group. In reaching a decision the White acts ad hoc (that is, for the particular purpose at hand and without reference to wider application) and in accordance with what he perceives to be in his own best interest. And according to the way he answers his own questions so will the person of inscrutable race be classified as White or as Coloured.

Popular histories of education in South Africa are curiously reticent on the subject. See, for example, E. G. Malherbe, Education in South Africa, Cape Town, Juta, 1925; M. E. McKerron, A History of Education in South Africa, Pretoria, Von Schaik, 1934; E. G. Pells, 300 Years of Education in South Africa, Cape Town, Juta, 1954.
The influx of pass-White and working-class scholars to Undersuburb High School gives the school a "bad name" and has led to a marked decrease in enrolment and to a rapid turnover of recruits to the teaching staff. The disparate social backgrounds of teachers and scholars is the basis for much antipathy and has far-reaching effects on the social structure of the children which is analysed, in a novel fashion, in Chapter VI.

Long-term teachers do not remain at the school out of choice and unlike recruits, who can readily leave, are virtually captive to the school. An examination of their reactions to this situation—e.g., their "loyalty" to the school and their perennial need of scapegoats—as compared to that of recruits, is a contribution to the study of formal organizations.

The school Principal, caught between opposing pressures exerted by Undersuburbers, teachers, and arms of government, provides a classic instance of the middle man. His stocks fall in relation to those of his Vice Principal and the two compete for ascendancy over the staff. The friction engendered between them (and the stratagems invoked to contain it) is described in detail in Chapter VIII.

**Technique of Study**

The social structure of the school could almost have been especially constructed to confound the enquirer. A school depends very largely upon its reputation for the quantity and quality of its intake of both staff and pupils. Outsiders, free of the subtle informal pressures which teachers can bring to bear on their fellows, cannot be relied upon to gloss over facts which do not reflect to the school's credit. Hence the elaborate whiting of the sepulchre on visits from
Inspectors; and hence also the evasive manner, often amounting to suspicion and downright hostility, with which the researcher is greeted. If teachers are not ready to treat the outsider with candour still less are the bureaucrats of the school system. They are sensitive to the complaints of parents, many of whom feel that even the most impersonal and superficial investigation of their children is an unwarranted intrusion on their privacy. The outsider is free to ask questions, and many do; but all they get is answers. To get more than answers the outsider himself must become part of the school. He must, in other words, adopt the technique of investigation known as observer participation, which technique was employed throughout this study. The writer spent an academic year teaching at Undersuburb High School, on a part-time basis, and has since frequently visited the school over a period of many months. Some of these months were spent living within two hundred yards of the school buildings.

Just as it was necessary to adopt the technique of observer participation in the school, so was it necessary to adopt the same technique in the community which the school serves. Government officials have, in recent times, made house-to-house visits in Undersuburb in an effort to classify the inhabitants into various ethnic groups and to prevent social mobility among them. Such visits have, not unnaturally, aroused a great deal of resentment and hostility. This hostility is visited upon anyone who tours the area armed with pencil and questionnaire: who knows? they might be government officials. So the sociologist cannot with confidence ask even the simplest of questions: he cannot ask a respondent where he or his siblings grew up, went to school, or goes to work; for each of these questions, if truthfully answered, elicits information which provides a clue to the ethnicity of the respondent and
his siblings. The sociologist is therefore left with no choice—-it is observer participation or nothing.

The social configuration of Undersuburb might be thought to lend itself to the social survey, to the questionnaire, and the schedule, to tables and graphs and all things mathematical. What kind of people, and how many of them, succeed in passing for White? What are the differential rates of interaction among neighbours of similar and disparate ethnicity? These are questions the answers to which might be elegantly arranged in graphs and tables, and they are questions which it is proper to ask. But, alas, the answers made here cannot be given mathematical expression. They are most of them impressionistic. That is a pity, but it is better than nothing. Observer participation has severe limitations, but the subterfuge which inevitably surrounds passing for White renders quite impractical the use of ancillary statistically-based techniques.

One further danger inherent in the technique of observer participation had better be raised before the reader himself raises it, and that is the danger it poses with regard to the formation of obtrusive value-judgements. It is impossible to live and work with other human beings for any length of time without finding one's sympathies, willy-nilly, drawn to one side or the other. It is not possible altogether to avoid value-judgements, though it is only fair to the reader that they be made explicit.

This study impinges at many points on the phenomenon of colour prejudice and the effect which this has on the life of a community, and it is a phenomenon which does not admit of moral equivocation. Let it be said at once then that the writer finds colour prejudice, and the grotesque structure of laws which perpetuate it, abhorrent and execrable. If the reader hears axes being ground in the background, he has at least been given fair warning.
CHAPTER I
THE PEOPLE OF UNDERSUBURB

Every school is embedded in a community and is to a greater or lesser extent transformed by it. If the social structure of Undersuburb High School is to be understood it must be understood in the light of the social structure of Undersuburb, the suburb of Cape Town in which the school is situated. As the topic of passing for white must play a prominent role in any discussion of Undersuburb this chapter is devoted to a description of relations between Whites and Coloureds in Undersuburb and to suggesting reasons for their comparatively harmonious nature. The most convenient way of introducing a discussion of race relations is to provide a picture of economic conditions and way of life in the suburb.

Undersuburb is bisected geographically and socially by a major thoroughfare which carries dense traffic.¹ The area above the road is almost entirely residential, and those who live there look down their noses upon their less fortunate neighbours below the road, living in an area devoted largely to light industry. At right angles to this thoroughfare, and crossing it, is Middle Street. A typical Middle Street house is one of a long row of almost identical seedy-looking bungalows, built many years ago, roofed with corrugated iron, and joined at each end to its neighbours or separated by a narrow aperture.

¹The district is mentioned in passing in several popular histories, such as P. W. Laidler, The Growth of Government of Cape Town, Cape Town, Unie Volks Pers, 1939; L. G. Green, Grow Lovely, Growing Old, Cape Town, Timmins, 1951.
A long white-washed wall, crumbling with neglect, and a rusty iron-grille gate bar the way from the street. The gate leads straight on to the narrow verandah for there is no garden, or at most, a yard or so of potted plants. The heavy green door is shut and the curtains of the front rooms are drawn under the fierce African sun. A long, dark corridor, with one or two bedrooms adjoining it, leads to a combined sitting and dining room. The doors of the bedrooms are shut, but a furtive glance reveals a bleak room containing two or three beds, several plain wooden chairs, an unpretentious wardrobe, and a dowdy Pre-Raphaelite print on the wall. Most of the space in the neat but drab sitting-cum-dining room is taken up by a large and highly polished table, surmounted by a posy of artificial flowers. Bordering the wall are heavy Victorian armchairs, grease-stained and inconspicuously patched. There are no side-boards or ornaments, but on the wall are more Pre-Raphaelite prints, and some wedding photographs. In a prominent position is a florid radiogram, tuned to the commercial radio. This is the visitors' room, scarcely used: the social centre of the home is the kitchen. The rent for such a house is perhaps six to eight pounds per month below the main thoroughfare, or eighteen to twenty pounds higher up. Most of the other houses in Middle Street differ from this one only in detail. The nearer the industry, the older the coats of paint, and the iron-grille gate is replaced by a rickety wooden one. The nearer the mountain the more spacious the rooms; the iron-grille gate is more elaborate and there is a brightly polished brass knocker on the door; and the prints on the wall are newer, the Pre-Raphaelites giving way to Tretchikoff.
At the upper extremity of Middle Street lies Uppersuburb, so called in order that it might be differentiated from Undersuburb: here live the "respectable" people, the cable-joiners, warehouse clerks, lorry drivers. The Ratepayers' Association frequently receives complaints from Uppersuburb householders that many sellers of property in the adjoining streets advertise their houses as being in the district.
At the lower extremity of MiddleStreet are tumbled and rotting tenements, pregnant with the smell of sour urine, and resounding with the cries of countless urchins. The rooms are cold, bare and tawdry, the walls mildewed. Here live the "roffs" (roughs), the linesmen and shunters, the night-shift workers. Among the "respectable" people they have the reputation of drunkenness, wife-beating and sexual promiscuity. The contempt in which they are held by middle-class Whites—and their anomalous position in South Africa's colour-estate system—is illustrated by the following passage, abstracted from a textbook in current use in South African universities.

Profound degeneration has been brought about among a considerable portion of the White population. It has produced a class known as the "poor White," numbering anything up to several hundred thousand, according to the definition given the term. It comprises all those Whites who, through weakness of character, moral fiber, or intellect, or through sheer force of uncontrollable circumstances, have dropped well below the average European standard of living. They have given
up the fight to maintain their status as aristocrats. While climatic
degeneration, the effects of isolation and the consequent lack of
educational facilities, or disaster by diseases, flood, or drought
have been potent factors in the genesis of this class, the presence
of a vast non-European population at a low standard of living has
produced much of the demoralization characteristic of them. There are
poor in every country. But they are a comparatively virile poor,
earning their bread by the sweat of their brows. The poor White is a
different kind of being. He does not do "kaffir" work; that would not
be right for a member of the dominant race. There is no other work
of which he is capable. So, in effect, he does little or no work of
any sort.2

FIGURE 3. (OMITTED)

PART OF UNDERSUBURB

Undersuburb, then, is, as far as middle-class White Capetonians are
concerned, a run-down working-class area, but within its limits there

2E. G. Pells, 300 Years of Education in South Africa, Cape Town,
are clearly recognizable degrees of "respectability."³

It has for many years had the reputation of attracting the "better class" of Coloured people, and the "poorer class" of Whites. If we except those Whites with the highest status (those living in Uppersuburb) and those Coloureds with the lowest status (those living in the lowest-lying areas) the reputation is well founded. This is accepted by Undersuburbers themselves. Even the Whites admit that, "Europeans don't come to Undersuburb unless they can't afford to go somewhere else," and that "the Coloured folk are of the better class here and people can see it every day." Thus there are many Whites who live in humble areas of Undersuburb, and many Coloureds who live in prestigious areas; and there are many Coloureds who live in tidier, cleaner, houses than their White neighbours, and who pursue occupations more prestigious than those of most Whites. It would seem that such a situation would lead to considerable hostility between White and Coloured, in view of the number of commentators who have reported that in societies stratified along colour lines it is the poorest of the Whites who are characterized by the most

³The investigation of social stratification within the White group in South Africa has not yet been the object of extensive or profound enquiry. I employ the terms "working class" and "middle class" (although I suspect that "status groups" would be more appropriate). I do so because they are in common parlance and are elastic in connotation. Some White Undersuburbers themselves use the term.
hostile prejudices against non-White co-members of their society. Williams' observation that

the greater the frequency of interaction with members of another social category who are of approximately equal status in respects other than membership of this category (education, occupation, etc.), the less the tendency to accept derogatory stereotypes, to feel sentiments of social distance, or to favor public discrimination appears relevant to the Undersuburb situation. And a relationship of "live and let live" seems only sensible in a community in which few are unequivocally White. "Everybody has some blood; so nobody can bother," they say. And, "We have to live together, so you can't go around denouncing your neighbours."

The people of Undersuburb tend to think of themselves not so much in terms of colour categories but as "respectable" people and "roff" people, categories which cut across colour lines. In attempting to establish racial categories in a more clear-cut way, the government is acting against tradition, for, as if in recognition of their close cultural and racial affinity to the Whites, the Coloured people of South Africa have always enjoyed a "special relationship" with the Whites: in the Cape of Good Hope Coloureds were in full possession of the franchise, sharing all political rights with Whites; and they did not lose these rights until the South Africa Act was amended in 1951, against sustained opposition. Unlike the Bantu people they are regarded as permanent residents in the White towns, are not subject to extremely restricted residential rights, a degrading system of influx control and the registration of service contracts. Unlike the Bantu people they retain a foothold in the skilled trades, have a limited right to strike, and have

---

access to liquor. Relations between White and Coloured have been particularly cordial in Cape Town, where the City Council initially refused to co-operate with the government in the demarcation of Group Areas, preferring to leave matters undisturbed. White and Coloured still, in 1960, shared the municipal franchise on a common roll, and in 1963 there were seven non-Whites on the Council. But even in Cape Town Undersuburb has been a special case.

Not only were Coloureds, until recently, given full political rights; intermarriage between Whites and Coloureds was tolerated, especially in Undersuburb, where there was a great deal of intermarriage between the races during the two world wars. The Scots, and before them, the Germans, are said to have been the men who most often married across the colour line. Many of the Germans were peasants and liked Coloured wives because they had the reputation of being hard-working.

---

Such intermarriage appears to have been accepted with equanimity, and even now in Undersuburb the Whites tend to shrug off such matters with the comment, "Everyone wants to better themselves—you can understand that." Quite foreign to them is the sanctimonious disapproval sometimes voiced in the columns of the Capetonian press. "It's just a simple old home-truth of human affairs," writes a columnist in the Cape Times, (addressing himself, by implication, to Coloureds). "It applies to all peoples and has applied at all times in all countries that if you try to be what you are not you are heading for heartbreak; if you accept what you are and face the world with self-respect for what you are, you can make a world much more to your liking."

Despite the vast edifice of discriminating legislation which the government has erected there is still a sense of common identity between the Whites and Coloureds of Undersuburb which both groups are anxious to preserve. Recently, there have been manifestations of hostility between the two groups, and several cases of apparently wanton assault by Whites upon Coloureds have come to light. Afrikaans-speaking railway workers, recently settled in the suburb, are the chief culprits: they call their neighbours "daa'ie Hotnots" (them Hottentots). And just as Whites sometimes despise their Coloured neighbours so do Coloureds sometimes despise their White neighbours: "Afrikaners are thick-soled and thick-skinned country bumpkins"; "an Afrikaner will exploit you, an Englishman abuse you, but a Jew will invest in you." The variants of the theme of colour prejudice are endless. However, these expressions of hostility are seen by Undersuburbers as a regrettable change from a more idyllic state of affairs.

The precise quality of this change is difficult to gauge. Informants naturally differ in their assessment of its extent, for they
have had different experiences. All, however, hark back to the Golden Age when relations between *Whites* and *Coloureds* were "excellent" or "very good" and when "things worked themselves out." There are many who say that they were "not aware of the race" of their neighbours, and that they had many friends of both races. Upon closer enquiry their replies suggest, however, that the only *Coloured* neighbours with whom *Whites* would consort with any degree of intimacy were those who were "just like Whites," and that *Coloured* persons who had succeeded in striking up a close friendship with *Whites* were fair of complexion. A "respectable Coloured" was sometimes referred to as "one that mixes in with Whites," or as a "Coloured European." Manifestly *Coloured* persons attending *White* churches generally sat inconspicuously at the back. *Undersuburbers* say, fair-skinned sons would not introduce a dark-skinned mother to their *White* friends "until they knew you didn't mind," and when they did introduce such a mother they did so anxiously, "like a university graduate introducing a grandfather who was only a labourer." It is possible that the rosy picture which *Undersuburbers* paint of times past is a reflection less of the truth than of the desire which *Undersuburbers* have to maintain friendly relations between *Whites* and *Coloureds*, despite external pressures. The Golden Age is thus, in Malinowskian terms, the Social Charter for the continuance of what, in South Africa, is now an extraordinary relationship.

What accounts for the extraordinary nature of this relationship? The suggestion advanced here is that affinities of socio-economic status confuse the colour line in *Undersuburb* and stimulate the association of *Coloureds* of high socio-economic status relative to other *Coloureds* with *Whites* of low socio-economic status relative to other *Whites*.

A survey of the occupations of the parents of *Undersuburb High School*
children (see Appendix A) can probably be taken as typical of White Under-suburb. A small proportion of the parents fall into categories typical of poor Whites (e.g., railway worker, bus conductor) or typical of Coloureds (e.g., housemaid, postman, clothing machinist, fisherman), but a very much larger proportion of occupations reported are skilled or semi-skilled manual occupations. Sixty-seven point four per cent of the fathers and 73.9 per cent of the mothers who are actively employed are engaged in such occupations. The point to be noted is that the occupational statuses and incomes of Whites and Coloureds in Undersuburb are more nearly comparable than are those of the total populations of Whites and Coloureds in both the Republic and the Cape Peninsula. In the Cape Peninsula as a whole 64.5 per cent of the economically active Coloured males are craftsmen or production workers, but only 28.9 per cent of economically active White males have these occupations. Amongst the Undersuburb High fathers 67.4 per cent fall into the similar category of skilled and semi-skilled workers. In other words, although Undersuburb High is a White school, a large majority of the fathers are in occupations comparable to those pursued by most Coloured men in the Cape Peninsula. The gap between the median incomes of White and Coloured males in South

6The socio-economic classification of occupations used here is one adapted to local conditions by E. Batson. See Appendix A.

7Population Census, 1960, Sample Tabulation No. 4: Incomes.
Africa is smallest among transport workers (R 1067 or £ 533.5), clerical workers (R 1143) and service workers (R 1199). And it is to these latter occupations that a considerable proportion of the fathers of Undersuburb High pupils belong. Many of these fathers are artisans, and where artisans belong to a trade union both White and Coloured receive the same pay. The Whites of Undersuburb then, belong to the working-class, and their socio-economic status is roughly the equivalent of that of their "better class" Coloured neighbours.

The composition of the households and the pattern of neighbouring of the parents are typical not only of the working-class in other parts of the world but are similar to the pattern of life of the Coloured people of Undersuburb. The composition of the households to which the pupils of Undersuburb High belong appears to follow a pattern resembling that associated with working-class status in sociological literature. Analysis of responses to a questionnaire administered to the pupils of Undersuburb indicates that the composition of the households to which the children belong are notable for two characteristics: the high proportion (23.4 per cent) in which the father is reported not present, and the high incidence (34.8 per cent) of households which are reported as containing relatives other than members of the nuclear family. In this

8 Population Census, 1960, Sample Tabulation No. 4: Incomes.

One cannot go around asking people questions about their relatives or they will suspect one of attempting to discover play-Whites in their midst. The only alternative means of eliciting quantifiable information about household composition—the administration of a questionnaire to the pupils of Undersuburb High—was accepted with misgivings, for it was thought that young children, many of whom are below average intelligence, would find difficulty in giving reliable answers, and that
last respect they resemble "upper-class" Coloured households.

Patterns of neighbouring in Undersuburb are altogether different from those found in Cape Town's more prestigious suburbs, where primly kept hedges are symbolic of a desire to keep oneself to oneself. In Undersuburb neighbours, both White and Coloured, are ever in and out of one another's houses, especially "in time of trouble"; and their children play together rumbustiously in the street outside. Children delight in writing essays about their neighbours, and the kind of neighbours they like are cheerful and co-operative: "If we are in any kind of trouble and we ask for any help they are very obliging." The kind they dislike are those who "walk around the house with long faces and don't even come out," or who fail to adjust themselves to communal living: "When the dog starts barking they run out like a lot of scarecrows as if something terrible has happened."

Afrikaans is the language of the majority of the Coloured

this difficulty would not be lessened by the fact that no pilot questionnaire was to be administered. The furore among parents when they discovered that "personal questions" had been asked of their children amply justified the decision not to administer a pilot. The misgivings concerning the children's ability to cope with the questionnaire were likewise justified when only \( \frac{141}{174} \) of the \( \frac{174}{1} \) responses were accepted as reasonably reliable. Of the 26 responses obtained from the youngest and least intelligent class, only \( \frac{14}{4} \) were accepted. The oldest and brightest class experienced less difficulty in answering the questions accurately, and 29 of their 32 responses were accepted and included in the final calculations. Those which were dismissed as possibly not reliable were those in which responses did not tally with the certain knowledge of some households which I and other teachers had, or which did not tally with answers given by siblings or with answers given to other questions inserted into the questionnaire as a cross-check. The questionnaire is reproduced as Appendix B.

people, and, in answer to the questionnaire, children attending Undersuburb High reported that 11.7 per cent of their households contained one or more persons (excluding boarders) who spoke more Afrikaans than English at home. That figure probably constitutes a conservative estimate of the amount of Afrikaans actually spoken in the homes—just under half of the forty-odd families I visited contained one or more persons who admitted to being "Afrikaans-speaking." This estimate, too, might be deceptively low, for I formed the firm impression that the use of Afrikaans at home was regarded as a matter of shame, and there was certainly a great reluctance to admit to it. More than once I heard a mother insist indignantly, in a strong Afrikaans accent, that "We don’t speak the language in this house!" One even blamed her self-styled "thick accent" (strongly Afrikaans) on her new dentures. On several occasions when I attempted to pursue a conversation in Afrikaans the atmosphere turned icy, and frantic attempts were made to resume the conversation in English. This is an uncommon reaction in Afrikaans-speaking homes outside the area, or in manifestly Coloured homes within it, the members of which, in my experience, commonly express delight that a "rooinek" (a Briton) should essay the language. Part of the reluctance to admit to Afrikaans as a home language is due to the fact that Afrikaans is the language, by and large, of the "rooffs" who live below the road: Afrikaners are castigated in school essays as "uncouth," "noisy" and

1288.6 per cent have Afrikaans as their home language, 10.2 per cent English, 0.9 per cent have both, and 0.3 per cent another. See Census Report, 1960, Sample Tabulation No. 2.

13Twenty out of 171 households. Of these, 9 contained more than one person who was reported as speaking more Afrikaans than English. Two other households contained one person who spoke more Italian than English.
"quarrelsome."

We have seen that in Undersuburb there is considerable similarity in economic status and in way of life between the Whites and the Coloureds. A study of attitudes in Undersuburb suggests not only that similarity of socio-economic status makes for harmonious relations between races, but also that, contrary to racial ideologies, people are more inclined to categorize other people on the basis of economic status and way of life than on the basis of race and colour. It is true that in Undersuburb class and colour often coincide. The "respectable" people live above the main thoroughfare, the "roffs" below it; and it is the Coloureds who inhabit the most densely populated and shabby areas below the main road, and the Whites who live in the newer, more prosperous-looking parts. But despite this, the line which Undersuburbers draw between White and Coloured is not an incisive one. Residents of long standing in Undersuburb do not follow the common South African practice of lumping together all Whites on the one hand and all non-Whites on the other; rather do they lump "Europeans" and Coloureds together, and differentiate them from "the native." Within the White/Coloured group a distinction is drawn between "Malays" and the nominally Christian; within the White/Coloured Christian group a sharp distinction is drawn between the "respectable" people and the "roffs."

The words of a White Undersuburb housewife illustrate this:

We used to live in Walmer Estate [1930s] but the Malays came and so we all moved out because if you stay there you get classed with them. There were very good families there, but we all went. But people should mix if they want and don't if they don't want to. It's a social thing. Why must they make a law? If a native bought that house next door then of course I would object, but Coloured families are respectable. After a bit you become intimate and you see what they're like. It all depends on what people are like. White skollies are as bad as Coloured skollies. And these farmer types [Afrikaners] know nothing and they come here with their mouth open. They don't like to see a Coloured family with a home as nice as a European. Give them enough rope and they'll hang themselves. Verwoerd is skrik [afraid]. He doesn't want to do anything much for
the working European or the Coloured people but the native will get anything they want because Verwoerd is skrik.

The distinction made between the "respectable" and the "roff"\textsuperscript{14} blurs the colour line, for it is a distinction based on social class rather than on complexion. "We don't go around here for the people are not worth mixing with," complained the mother of one of my pupils at Undersuburb High. "There used to be Coloureds living here in this street--tip-top Coloureds--but they had to move because the area has been declared a White zone: and then rubbishy Whites move in, and they make it so obvious." There is some similarity in this regard between Undersuburb and Bahia, where "A poor White man is a Negro and a rich Negro a White man."\textsuperscript{15}

It is not only the close affinity of social and economic status in itself that gives to Whites and Coloureds a sense of common identity, but also the fact that the economic conditions of all Undersuburbers separates them from other groups. It has already been pointed out that the Undersuburb Whites of are poorer than the majority of South African Whites, but they are not simply at the bottom of the ladder--they are beyond the pale. The social-class hierarchy of White South Africans has not yet been the object of substantial study but few observers would seriously quarrel with Andreski's estimation that "Personal contacts between Whites are marked by easy informality, expressions of deference never assume \hfill

\textsuperscript{14}The cleavage between the "respectable" people and the "roffs" to some extent parallels the rift noted by Kuper in Coventry. Kuper found patterns of neighbouring, standards of personal cleanliness and of house care, and form of speech and social intercourse differed so sharply that he distinguished between the "respectable" and the "ordinary" families. See L. Kuper, \textit{Living in Towns}, London, Cresset, 1953, Ch. V.

extreme forms, differences in manners are relatively slight, and even among English-speaking people 'stand-offishness' is incomparably less common than in England," and that "In comparison with Europe outside Scandinavia, the most salient feature of this stratification is the relative attenuation of what is called social distance, in spite of great difference in wealth."16 However, members of the very lowest reaches of the White South African social-class hierarchy are not included in this description; such people as *Undersuburbers* are the object of their compatriots ridicule: "If you want to make somebody laugh," said an *Undersuburb* High School teacher, "say *Undersuburbs*." There is, in fact, a tendency amongst Capetonians to think of all *Undersuburbers*, including *Whites*, as *Coloured*. The logic of the Capetonian's thinking is simple. There are *White* South Africans who are very poor, but their number is so insignificant that they have been endowed with the peculiar appellation of "Poor Whites" and are described in newspaper editorials as a "Problem." That their number is now small is largely a result of *apartheid*: most unskilled workers in the Republic are non-*White*, because occupations which require skills above a certain level are, in general, reserved for *Whites* through the *Industrial Conciliation Act* of 1924 (and subsequent amendments). There are virtually no *White* domestic servants, no *White* road navvies, no *White* dock labourers. It becomes easy to equate light skin complexion with the possession of occupational skills and a relatively high standard of living. And from that point it is but a short step to the belief that relatively unskilled *White* workers are "not really *White*, Dear." "Poor Whites" are poor, by this reasoning, not because

they are unskilled, but because they are not altogether White. So, pov-
erty, relatively unskilled manual occupation, and residence in a run-down
suburb are equated not with lower-middle-class White status but with
"Coloured blood": class is perceived as a correlate of Estate. As a
defence against this prejudice Undersuburbers often heatedly deny to other
Whites that they live in Undersuburb and mendaciously profess to residence
in nearby suburbs.

In the Capetonian's mind poverty is associated with "Coloured
blood." So, to some extent, is the Afrikaans language, for Afrikaans is
the home language of the majority of the Coloured people. So, where a
swarthy skin leaves the Capetonian in doubt as to a person's colour—and
few Whites in Undersuburb possess a skin so fair as to inhibit all specu-
lation as to their race—and where that swarthy skin is also associated
with poverty, then his doubts tend to be resolved one way or the other
according to the person's home language. Thus the Capetonian's tendency
to think of the White people of Undersuburb as Coloured is given added
impetus by the fact that many Undersuburbers speak Afrikaans, or a mix-
ture of English and Afrikaans, at home. And the Capetonian's suspicion
that the Whites of Undersuburb are really Coloured because many of them
are Afrikaans-speaking, is further strengthened by the fact that Under-
suburb is a mixed residential area in which avowed Coloured persons live
in close proximity to White persons. All this encourages the Whites of
Undersuburb to think of themselves not so much as members of an exclusive
White group but as members of a Coloured/White group. For a White person
is only as White as he is thought to be. As W. I. Thomas said, "What men
believe to be real are real in their consequences."

Undersuburbers not only feel themselves different from the super-
ordinate White group; they are also concerned to preserve the distinction
between themselves and the "lower" racial groups.

There is a "we-feeling" between the Whites and Coloureds of suburb, a sense of common identity. Colour prejudice is not absent among either Whites or Coloureds but it tends to be directed against Bantu rather than against Coloureds. This prejudice affords both Whites and Coloureds a comfortable feeling of superiority and a closer identification with the superordinate White Estate. But prejudice is not directed solely against the Bantu, and it is instructive to identify its targets. Before and during the 1939-45 war many Jews settled in and lived in rooms above their business premises. Almost all have now left the area to live in more "respectable" suburbs, such as Sea Point. They recall how they were the object of street corner taunts in (e.g., "I had a piece of pork and I put it on a fork . . .") and some of them attribute this hostility to their avowed feeling of superiority to the majority of Afrikaans-speaking newcomers to the area, mostly poor and highly colour-conscious railway workers, are widely reviled as "farmer types" for their cavalier treatment of "respectable" Coloureds. White and Coloured alike recount with every sign of horror the incident in which a Coloured school head-master was beaten up on his doorstep, without apparent motive, by White Afrikaans-speaking neighbours. The most recent wave of immigrants to --Portuguese, Greeks, Italians--have taken over the economic role once played by Jews and have become the focus of much ill-feeling: "The Portuguese--you know, with the fish carts and things--they can come in but our respectable Coloured people has got to get out." Pass-White children, residents in , who attempt to enrol to a White high school outside the area may be accused of "disloyalty," especially by older White , and some have,
for this very reason, been refused admission to Undersuburb High when they subsequently applied for it. Anti-Moslem prejudice is common to perhaps all Undersuburbers (except Moslems) but is found in its most virulent form among Coloureds, where a "Malay" stereotype is well established. According to the stereotype "Malays" practise nepotism, are "close," proud, do not attempt to pass for White,¹⁷ and are guilty of "toenaadering"—of tamely co-operating with the government in the implementation of its policy of racial segregation. Thus, hostility is directed not only against Bantu but also against all those, irrespective of their colour, who threaten to disrupt the sense of identity shared by the Whites and Coloureds of Undersuburb.

Thus the socio-economic and cultural affinity between Whites and Coloureds, together with the White Capetonian's tendency to regard Whites as "really" Coloured, generates a we-feeling between the two groups in Undersuburb and permits of the emergence of cross-cutting loyalties based on socio-economic status rather than colour.

On only one occasion—during a recent period of crisis—have I observed the we-feeling partially disintegrating and the Whites, through community agencies, discriminating in favour of "roff" Whites and against "roff" Coloureds. The Western Province Land Tenure Advisory Board sat to consider zoning various regions of Undersuburb under the Group Areas Act. The School Committee of High School joined in

¹⁷S. Patterson, in Colour and Culture in South Africa, London, Routledge and Kegan Paul, 1953, p. 319, claims that "Malays do not feel themselves inferior because they are not White, nor do they copy European ways nor attempt to 'pass' into the European group," a claim echoed by L. Marquand in The Peoples and Policies of South Africa, London, Oxford University Press, 1962, p. 85. This claim is not altogether justified for I know some "Malays" who have surreptitiously enrolled to White schools and universities.
an astonishing alliance with the Nationalist Party and Dutch Reformed Church in advocating that a slum area, inhabited predominantly by "roff" Coloureds be zoned for exclusive White occupation. The Chairman of the School Committee explained; "If it was declared Coloured the White [and near-White] people would be declared Coloured [under the Population Registration Act] or else would have to get out. In any case there were so many Coloureds there only because of speculator landlords who sub-let a dwelling to three or four families to ensure regular payment of rent."
CHAPTER II
SOCIAL MOBILITY AMONG THE CAPE COLOURED

The we-feeling shared by the Whites and Coloureds of Undersuburb, examined in the previous Chapter, makes the suburb a well-nigh ideal environment in which to practise passing for White. Passing is in fact endemic to the suburb—hence the epithet "White"—and to Undersuburb High School. In order to elucidate the consequences which this has for the school, we must first examine the process of passing for White per se.

In this Chapter an account is given of social mobility among the Cape Coloured people, and the suggestion is advanced that this mobility cannot be fully comprehended except in the context of Coloured/White relations. Upward mobility among the Coloured people and among the White people is, for those Coloureds whose complexion is fair and who therefore have the potential to pass for White, one continuous process.

Commentators discuss the Coloured people in terms of three "classes." Neither the designation of the units nor their number appear convincing to Coloured informants. Van der Merwe\(^1\) admits that "No clearly demarcated class grouping exists in the minds of the Coloured [Stellenbosch] community," but nevertheless, for the purposes of rating, names three "classes." Patterson,\(^2\) Cilliers,\(^3\) van den Berghe\(^4\) and the

---

Cape Coloured Commission\textsuperscript{5} likewise speak in terms of "upper," "middle" and "lower classes." But discussions with some two dozen Undersuburb Coloureds, mostly teachers and artisans, indicate that Coloured Cape-townians, other than those who profess Marxism, do not themselves think in terms of "classes," nor does the magic number three figure in their thinking: they think in terms of a continuum along which are marked various points representing achievements in the process of upward social mobility, rather like the squares in a game of snakes and ladders; and the points are six in number.

At the first and most lowly point is the farm labourer, despised by Undersuburbers as a country bumpkin: "He's raw and he doesn't know that there are places where a Coloured person is not dragged out of bed at five in the morning but is treated like a human being. In town we have regulation hours."

He reaches the second point on the continuum when he moves to town. Rural-urban migration has proceeded at a rapid pace\textsuperscript{6} and is invariably described by informants as part and parcel of the continuum and not as a qualitatively different process. Presuming the migrant is not fortunate enough to have relatives who have already a bridgehead in the city, claim informants, he lives at first in a "pondok," or corrugated-iron shanty, such as those which were once common at Windermere. He is described by informants as likely to be illiterate, generally unemployed, and to burden the welfare agencies during the winter months. If he is unsuccessful in his attempts to acquire employment he may lose

\textsuperscript{6}S. P. Cilliers, \textit{op. cit.}, Chapter 2.
all incentive to work and spend his time drinking, gambling and indulging in petty crime. Such as he, are commonly referred to as "skollies."

FIGURE 4
A PONDOK

Although today it is common to hear any kind of delinquent referred to as a "skollie," a clear distinction should be made between the part-time "holhanger" who has a job most of the time but who spends his evenings hanging about on street corners and who may indulge in a little petty crime of the sort practised by White "ducktails," and those for whom street-corner life and petty crime are a vocation rather than a hobby. This distinction is no longer generally made, but it is to the latter group that the term "skollie" is more correctly applied. The "skollie" is not simply a delinquent: his group is partly self-perpetuating, "skollies" often being the children of "skollies." In the days when liquor for non-Whites was still rationed to two bottles a day, they earned their living "mailing" for "smoggelhuise" (shebeens),
and also by dagga (hemp) peddling, petty theft and robbery. "Skollies" have developed a social organization and a way of life which sets them apart from the majority of Coloured people. This fact is of importance if only because its existence unduly colours the Whites' conception of the Coloured community. The dichotomy which many White persons make between "respectable" Coloureds and "skollies"--which carries the imputation that "skollies" constitute a considerable proportion of the Coloured community--is indicative of nothing so much as White's ignorance of their Coloured compatriots.

If the aspirant to upward social mobility does not fall by the wayside among the "skollies" and is lucky enough to land a good job for perhaps three or four pounds a week, claim informants, he moves up to the next point on the continuum. He builds himself a semi-permanent structure, built to last about five years, such as those which are to be found along Settlers' Way, on the Cape Flats, and at Retreat, and perhaps invites some of his country relatives to share it with him.

FIGURE 5
A SEMI-PERMANENT STRUCTURE
The next step is more difficult. If he acquires a sufficient degree of urban sophistication and accumulates a moderate amount of capital, according to informants, he moves to a sub-economic housing estate, such as those known as Silvertown, Bridgetown, Steenberg and Bonteheuvel (described contemptuously by intellectuals as "locations"), or to District Six, the Malay Quarter, or to some of the more unsavoury parts of lower Woodstock and Salt River. With this step he joins the ranks of the majority of his fellows, the people who have spent perhaps six years at school, the people who form coon troupes (execrated by the intellectuals for their Uncle Tom image), the people who live in houses with names like "Utopia," "Greenfields" or "Hightrees," and who share them with two or three other households.

Informants claim that access to the next point on the continuum, occupied by the group of artisans, skilled and semi-skilled workers, (such as those who predominate in Crawford, the older parts of Athlone, Woodstock and Salt River), depends on the acquisition of occupational skills and the husbanding of economic resources. The training required for entry into a trade is, for many, prohibitively expensive, and their upward progress is thereby brought to a halt. Economic failure, precipitated perhaps by too large a family, means slipping down the scale again. Economic success provides an opportunity for moving up into the ranks of the elite. Parents of this group will attempt to ease their children's upward mobility by encouraging them to enter a trade, a white collar occupation, or, best of all, the teaching profession.7

7That teaching serves as an important avenue of upward social mobility among the Cape Coloured is indicated by P. Carstens in _The Social Structure of a Cape Coloured Reserve_, London, Oxford University Press, 1966, p. 143, and by S. Patterson, _op. cit._, p. 164.
So far no gates have been firmly closed against the aspirant to upward social mobility within the Coloured group: all depends on industry and thrift. "It's like this," explained one man who had made the grade, "when you get a job you are a Have-Got and your neighbours are Have-Not-Gots. So you look around, and say: 'Where are the birds of my feather?' You find them and move in. Then you make more money, and soon your neighbours are once again Have-Not-Gots. So once again you look around for birds of your own feather. And so it goes on." But the next step, entry into the elite, is more formidable, and success depends on factors some of which are ascribed rather than achieved.

The elite consists of business men and professional people, the people whom Patterson and van der Merwe describe as "upper-middle
To become a successful business man requires capital, and few are able to amass it. To enter a profession requires a lengthy education, and few are able to afford it. And neither wealth nor education alone, say informants, is sufficient qualification for entry into the elite. In the first place, the successful candidate must have a "respectable" way of life, for the norm of "respectability" is every bit as important among the Coloured people as it is among "lower-middle class Whites." He must live in a fashionable area such as Walmer Estate (Woodstock), Sunlands Estate (Lansdowne), Claremont (between the railway line and Third Avenue), and Wynberg (Park Road area). It is a help if he comes from a "good family" and if he speaks English. It is extremely helpful if he comes from a "good" Coloured school, such as Trafalgar High, Livingstone High, Cressy— or any White school. Entry into the elite is eased considerably by the possession of a fair complexion and European features. Indicative of the esteem in which these features are held by Coloured people are concoctions advertised in Drum and Golden City Post (which cater for a largely non-White readership) which purport to lighten the complexion ("A man's skin gets lighter, brighter.") or straighten the hair ("You too can have straight and beautiful hair.") However, as van der Merwe points out, a dark skin will not necessarily prevent a man from acquiring elite status.

---

8S. Patterson, 1953, op. cit., p. 167; H. W. van der Merwe, 1957, op. cit., p. 90.

10See H. W. van der Merwe, 1957, op. cit., pp. 27-28. Some Coloured schools are thought to be "snooty" because of their reputation for favouring fair-skinned applicants.
Those who rank immediately below the elite may be presented with the choice of either moving up into the elite or of leapfrogging over it into the lower ranks of the *White Estate*--a process that is known as *passing for White*. The year 1857, in which the Groote Kerk of the Dutch Reformed Church in Cape Town became "all White" for the first time, can be taken as a landmark at which *passing* as analytically distinct from miscegnation became of significance. The pace at which the process has proceeded from time to time cannot be precisely estimated. It is probable that it has quickened in recent years, for the rapid absorption of *Coloureds* into industry in the 1930s, and the subsequent rise in the *Coloured* standard of living, has made *passing* increasingly feasible from a financial point of view. Moreover, the incentive to *pass* has increased as a result of recent legislation which has added to the innumerable humiliations of *apartheid*, made the acquisition of various relatively well-paid occupations difficult for *Coloured* persons to enter, and threatened to bring the entire process to a halt. The extent to which *passing* has occurred, as even the *Cape Coloured Commission* confesses, cannot be calculated with any precision, for, naturally, those who have succeeded in *passing* take every precaution to prevent their *White* compatriots from discovering this fact. It is probable that most of those who have the ability to *pass* do so, for few *Coloureds* of fair complexion

---

12 Census data are insufficiently precise to be used as a basis for calculations of this kind, especially since the number of *Coloureds* who *pass for White* is counterbalanced to an unknown extent by *Bantu* who *pass for Coloured*. 
live in manifestly *Coloured* areas such as District Six; and common obser-
vation makes it clear that many more so-called "doubtful cases" are to
be found in the *White* than in the *Coloured* group. A popular South
African writer elegantly defines a *Coloured* person as "one who has failed
to pass as a White."\(^{13}\)

The process of *passing for White* is made feasible, in the first
place, by the fact that the cultures of the *White* and *Coloured* peoples
are very similar, though there are differences. Some of the differences,
such as the Mohammedan religion of the minority, are obvious. Also
obvious is the use of Afrikaans as a home language. The *pass-White* will
often adopt English as his first language, but if he does not he will at
least expunge from his vocabulary words and phrases which can be identi-
fied as belonging specifically to the *Coloured* argot. Equally obvious
is the relative poverty of the *Coloured* people, and with it, the rum-
bustious way of life which seems to be associated with low-status groups
the world over. This the aspirant must relinquish. There are also
various other differences, such as loyalty to a "Coon"-troupe, or a
taste for "dagga," which must be concealed. The subtler differences, a
desire for certain foods, perhaps, or a pronounced anti-Muslem prejudice,
are not so readily recognized by *White* persons as primarily *Coloured*
traits and, for this reason, aspirants are more careless about owning to
them.

*Passing for White* is made feasible, in the second place, by the
fact that there are infinite gradations between *White* and non-*White* skins
and physiognomies, so that it is often not possible to tell from physical

\(^{13}\) L. Green, *Outspan*, November 17, 1950, p. 19. An analysis of
various other definitions of *Coloured* is made by S. Patterson, *op. cit.*, pp. 361-363.
features alone to which race a particular person belongs. These infinite gradations owe their existence to the extensive miscegenation which began with the earliest Dutch settlement in South Africa and which has continued ever since.\textsuperscript{14} Jeffrys\textsuperscript{15} argues convincingly that since by the end of the 17th century there were fewer than four hundred White colonists at the Cape, and that 15-30 per cent of all marriages at the time were "mixed," "It is fairly safe to say that where any family has been in the country for more than two hundred years, the chance of having no infusion of colour is rather remote." Van den Berghe\textsuperscript{16} argues that "One can safely estimate that anywhere from one-tenth to one-quarter of the persons classified as 'White' in the Cape Province are of mixed descent, and that every 'old family' from White Cape Society has genealogical connections with Coloured families." Findlay\textsuperscript{17} estimated in 1936 that at least 733,000 persons of "mixed blood" were included in the 1.9 million persons then recorded as Whites in South Africa.

The difficulties experienced by those whose task it is to classify South Africans in terms of racial categories under the Population Registration Act No. 30 of 1950 (which provides for the issue of identity cards on which is recorded the race of the bearer) are as nothing

compared to the embarrassment and tragedy which can be the lot of those classified. A Member of Parliament\textsuperscript{18} cites the case of a married couple who had their race classification altered five times. They were declared \textit{Coloured} in 1953; in 1955 they were accepted as \textit{White}. In 1957 they were reclassified as \textit{Coloured}; in 1958 as \textit{White}; in 1959 as \textit{Coloured}; subsequently as \textit{White}. Muriel Horrell recounts many similar cases.\textsuperscript{19} The following case study, collected by the author in Undersuburb and the only one of its kind ever published, exposes the arbitrary nature of \textit{racial} classification by demonstrating how different members of the same family can be classified disparately for the purposes of legislation and how each member may act over time and in varying circumstances as a member of more than one \textit{race}.\textsuperscript{20}

Ego's paternal great-grandfather (1) (See accompanying Figure 7) was born in Scotland and emigrated to Stellenbosch, where he worked on the railways in an unknown capacity. He married a \textit{White} woman, whom he later divorced. He than remarried, this time to a \textit{Coloured} woman. They produced a son who remained in Stellenbosch as a produce farmer. He lived and worked as a \textit{White}, and was married to a girl from St. Helena, about whose parents nothing is known.

They had nine children, seven sons and two daughters. Two of their sons, (2) and (3), remained in Stellenbosch. One was a produce farmer and the other owned a store. Both lived and worked as \textit{Whites}, and married women who also lived and worked as \textit{Whites}. The two men died before the era of \textit{race} classification. Their widows survive, but it is not known if and how they have been classified. One couple was barren, and nothing is known about the children of the other.

One son, (4), moved to Undersuburb, where he worked as an engine driver. He lived and worked as a \textit{White}, but died before being classified. He married a woman who lived as \textit{White}; her classification is not known. Neither their son, a teacher, nor their daughter,

\textsuperscript{18} Hamilton Russell, M.P., Cape Times, 19 February, 1963.

\textsuperscript{20} Some details have been altered in order to preserve anonymity.
a cutter in the clothing industry, is married. Both live, work and are classified as Coloured.

Another son of Ego's paternal grandfather, (5), moved to a small farm at Phillipi, and from there to Crawford, and then to Sunnyside. This area was declared Coloured under the Group Areas Act, so he moved to Lansdowne, for both he and his wife lived, worked, and were classified as White. Their unmarried daughter lives, works, and is classified as White, and is a typist. Their married daughter, a shop assistant, and her husband, tramway mechanic, is in the same position.

Another son of Ego's paternal grandfather, (6), moved to Lansdowne where he lived and worked as a Coloured teacher. He died before race classification. His wife lived as Coloured, but her classification is unknown. Their son became a carpenter, and their three daughters each married teachers. All these children and their spouses live, work, and are classified as Coloured.

Yet another son of Ego's paternal grandfather, (7), lives with his brother in Vasco. He lives as a Coloured, but his classification is not known. He is the darkest of the family, and is not allowed to answer the door or to sit at the table when visitors are present.

One of Ego's paternal aunts, (8), lived as White and married a man who also lived as White and who had a private income. Both died before classification. They lived in Parow and had no children.

The other paternal aunt, (9), moved with her husband, who had an unspecified job in the navy, to Parow, where both lived and worked as White. She was classified White—but her husband died prior to classification. Their only son, who is in the army, lives, works, and is classified as White.

Nothing is known of Ego's maternal great-grandfather except that he was Dutch and that both he and his wife severed connection with Ego's mother when she married a Coloured man. Ego's maternal grandfather, (10), a tobacco farmer from Stellenbosch, married a woman who, like himself, lived and worked as White. Both died before classification.

They had two children. Nothing is known about the son, (11), except that he lives as White and that he severed connection with his sister, Ego's mother, (12), when she married a Coloured. She married the remaining son of Ego's paternal grandparents, (13), and moved from Stellenbosch to Maitland; thence to Tiger Valley and Crawford. Her husband was a carpenter. Both live and work as Coloured, yet both are classified as White: they find this amusing.

They had seven children, six daughters and a son. The son, (14), a clerk, lives as a Coloured, works as a White, and is not yet classified. His wife is in a similar predicament. One daughter, (15), married a shop manager. Both live and work and are classified as White. The two other married daughters, (16) and (17), one of whom is a clerk, live, work, and are classified as Coloured.
FIGURE 7: A PASS-WHITE'S FAMILY TREE
Their husbands—a clerk and a carpenter—are in the same position. Ego, (18), is unmarried and lives and works as White, but had delayed applying for her Population Registration Card from fear that she might be classified Coloured. She has once been dismissed employment because she refused to produce her unemployment registration card: she previously worked as Coloured and this is stated on the card. Her two unmarried sisters, (19) and (20), a shop assistant and a nurse, both live as Coloureds, but work as White, and are classified as White.

Thus, of Ego and her siblings, two live, work, and are classified as Coloured; one lives as Coloured, works as White but remains unclassified; two live as Coloured but work and are classified as White; one lives and works as White but is unclassified; and one lives and works and is classified as White: their parents live and work as Coloureds but are classified as White. Thus do the architects of apartheid separate the races.

Most of those who pass belong, claim informants, to the artisan and skilled worker group. It seems probable that those who rank above this group in the internal status hierarchy are tempted to remain within the Coloured camp, sometimes out of political loyalty to their compatriots, and sometimes perhaps for fear of increased economic competition within the White group. Those who rank below the artisan group seldom possess the characteristics necessary for successful passing. The most important of these characteristics is, of course, a fair skin, and this is found mainly among the elite and artisan group.21 But a fair skin is not the only qualification necessary for successful passing. Cultural criteria must also be taken into account. And here again it is the elite and artisan groups who possess the most qualifications for passing. It is they who are able to afford the education necessary to enter White occupations, the relatively high rent payable on properties bordering White homes, the standard of living and articles of dress which most Whites enjoy. It is they who most commonly speak English as their first

language, or who have stayed at school long enough to acquire proficiency in it as a second language.

To facilitate the process of passing, Coloureds will, it is commonly said, often move from the town or province where they are known.\(^{22}\) One hears of Coloureds who have moved from Johannesburg to Cape Town for this purpose, and of others who have moved from Cape Town to Johannesburg.\(^{23}\) Dr. Wollheim estimates that there are at least 25,000 pass-Whites in Johannesburg today.\(^{24}\) Many others migrate to England, Canada, and elsewhere. But the strongest movement is probably from the districts of the South-Western Cape—the area which is bounded by Swellendam on the West and Uitenhage on the East, and which includes George, Knysna, Mossel Bay and Oudtshoorn—to Cape Town itself. The South-Western Cape was traditionally a farming area and the movement to town is in part a consequence of increasing mechanisation on the farms. It is also an area of traditional intermarriage across the colour line. The Afrikaans names Van Rensburg, Groenewald, Jacobs, Marais, Oktober, Veldsman, Booysens, and others, occur frequently among Coloured families, many of whom claim blood relationship with their "White cousins."\(^{25}\)

\(^{22}\)Migrations were deliberately planned for this purpose, but it is probable that, more often than not, this was just one of the factors taken into consideration when planning a move.

\(^{23}\)In the Cape Times of April 4, 1963, a member of the School Board is reported as advising the father of a dark-complexioned child to send his son to a school in the Transvaal, where it is easier for such a child to enrol to a White school.

\(^{24}\)Cape Times, July 5, 1961.

\(^{25}\)For a discussion of genealogies in this area see J. Hoge, Bydraes Tot die Genealogie Van Ons Ou Afrikaans Families, Amsterdam, Balkema, 1958.
secondary strain of English intermarriage, especially in the areas of George and Knysna, where the names MacKay, Martin, Dunn, Owen, Benn, and Bailey are not uncommon among Coloured families. The offspring of such intermarriages seldom find themselves fully accepted by their White relatives, while they themselves feel superior to their Coloured relatives: they needs must move in order to establish themselves as White. Today 60 per cent of the Cape Coloureds live in towns and cities, 25 per cent in Greater Cape Town alone. Many live in the older, run-down parts of Cape Town, near the city centre, and along the railway line to the Southern Suburbs. Others live in recently established townships such as Athlone and Kensington, on the fringes of the city. According to the 1960 census report they slightly outnumber the Whites of Undersuburb.

Such is the attraction of Undersuburb to Coloured people that, while the numbers of White residents in Undersuburb declined by about a third between 1936 and 1960 (because, as one informant put it, "The roof leaks, the Jew exploits, and I'm moving away from the skollies") the number of Coloureds increased in the same period by almost half. The proportion of Coloureds to the total population of Undersuburb has risen steadily from approximately 30 per cent in 1936 to approximately 50 per cent in 1960.27

27 See Appendix C: Changes in the Racial Composition of the Population of Undersuburb, 1936-1960. [omitted]
Undersuburb and its environs has for many years attracted "better class" Coloured residents. Its attraction for them is, in the first place, proximity to employment, for most Coloured housing estates, such as Bonteheuvel, are far from the factories of Undersuburb which provide many Coloured persons with work. The income of most Coloureds is decidedly lower than that of most Whites, and the extra expense involved in travelling to work from these outlying Undersuburb areas is seen as a heavy burden. A second attraction of is that rents, compared with other White areas, are low. But probably the greatest attraction of the district for Coloured persons, according to informants, is the fact that there White and Coloured housing intermingle. Whites and Coloureds live side by side as neighbours, though there is a tendency for the two groups to live on different sides of the same street, and a tendency for Coloureds to concentrate in densely populated pockets below the main road. This intermingling provides an opportunity for relatively fair Coloured persons to acquire White status through residence in a White area—one necessary condition of passing for White.

The reaction of Coloured people to those of their number who pass varies from the sympathetic to the hostile. There are those who give what help they can to passers and who dismiss the entire process airily as a justifiable means of circumventing economic discrimination: "It's purely economic. If you can pass you can get a good job. We accept it. We don't think it's disloyal. It's necessity." Yet others content themselves with bemoaning the loss of the pass-Whites to the Coloured Undersuburb community. Said a dubiously White housewife: "The cream of the Coloured people have left the country. There's lots left from here. They weren't used to it [the harsher discrimination practised since the
Nationalist Party came to power]. They're all over now--Canada, England, America. . . . Is there any trouble in England? They make a very good impression. Only the scum is left." On the other hand, denunciation and exposure to the White authorities is not uncommon. At one time an unofficial committee was formed among those property owners in the Undersuburb area who had been ordered to move under the terms of the Group Areas Act with the express purpose of denouncing all their White relatives and all Whites whom they could prove had non-White blood. Hostility towards pass-Whites is particularly evident among the intellectual elite, which consists largely of younger, radical school teachers, some medical doctors, and the majority of lawyers. These tend to despise passers as turncoats. Mr. George Golding, President of the Coloured People's National Union, is quoted in the Cape Times as having said: "I feel the Coloured people who, through subterfuge, have achieved White recognition, have 'ratted' on their own people, instead of being in the fight to obtain full citizenship to which we are entitled, including the vote."\textsuperscript{28} Members of the elite also regard passers as upstarts: those who pass deny, by implication, the worth of the Coloured community, in which the elite have staked their all. Worse, it seems that a substantial proportion of those who pass occupy a status immediately below that of the elite, so that in the act of passing they leapfrog over the elite into the superordinate White group. From the point of view of members of the elite, pass-Whites are cheating not only in the sense that they assume, largely by virtue of their innate complexions, a superordinate status in relation to the elite without necessarily first acquiring the education and sophistication usually associated with elite status, but

\textsuperscript{28}Cape Times, August 3, 1963.
also in the sense that they are not playing the game according to the rules and entrenched values of the total society. Coloured businessmen (especially Muslems), white-collar workers, Protestant ministers of religion, and some of the older teachers (especially those with a rural background) are described by Coloured informants as conservative in their ways and as supporters of the government. Of them it might be said that, in the words of Sarah Gertrude Millin, "To aspire to compete against the White man, to have dreams of drawing, in any respect, level with the White man, would seem almost a violation of nature."29 One Moslem businessman explained his thinking thus:

The Coloured people lived in complete harmony with the Afrikaner until the Tommies came—the scum of society—miscegenated with them, debauched them, and taught them how to build slums. The Coloured people lost their race pride. They would not even speak their own language. So did the Bantu—they wanted to be Yanks. Now that the Nationalist Party has come the Coloured man has every opportunity to better himself. He does not have to start from scratch. He can follow in the path of the Whites, who is the boss in this country.

Pertinent here is Dickie-Clark's observation that

The Coloureds' slight but valuable 'overlap' in the social dimension depends for its continuance on the maintenance of the domination of the Whites as a group. . . . Thus, despite the Coloured stratum's almost complete exclusion from the Whites, they yet have a stake in the maintenance of White rule.30

Those who pass during working hours but return to their families and friends at night, or at least at frequent intervals, appear to escape the full force of their relatives' enmity; indeed they are likely to be given every assistance. This reaction might be interpreted as a reflection of that aspect of the White ethic which encourages the individual

to exact maximum advantage within fair rules and to obtain the best employment he can. But those who cut themselves off completely from their relatives are likely to be regarded with varying degrees of hostility.

Here is a case in point.

The brothers Jannie and Piet are both of relatively fair complexion and possess European physiognomies. Piet, who is the fairer of the two, decided to pass, while after a few humiliating experiments, Jannie decided otherwise. Jannie married an obviously Coloured woman and brought her to live in the paternal home in lower Undersuburb. Piet married a woman of fair complexion, and moved to a house above the main road, where there were more Whites, and cut himself off completely from his brother and other relatives. About two years ago, unbeknown to Jannie, he moved to a White suburb far from Undersuburb and his old acquaintances.

When the father died, Piet, the eldest, made arrangements for the funeral. Jannie offered to help, but his offer was brusquely refused. He was told to keep away from the ceremony, lest his brother be embarrassed. Nevertheless, he attended. Few were present, and, as it happened, there were not enough pall-bearers. Piet cast about himself in desperation, but though the need was pressing, deliberately overlooked his swarthy brother. After some hesitation Jannie wordlessly aligned himself with the other pall-bearers, and carried his father to his grave. While the grave was yet open his brother accosted him, deeply angered. "I thought we understood each other . . ." he hissed. So Jannie lost his temper and threatened to knock Piet into the grave. They broke up amid bitter recriminations.

Jannie despises his brother for cutting himself off from his family of origin and for assuming a form of speech and mannerism which is, allegedly, superciliously White. "I can't talk to him anymore," he complained. "We grew up together; but now he is White and I am not." On the other hand, he has no objection to passing in some circumstances. He himself attends White cinemas and public houses and offers to fight anyone who challenges him. He has enrolled his own son to a White technical college. This son, after remaining at the college for only a few weeks, burst into the headmaster's office and exclaimed, in a highly emotional state, "I don't fit in here. I am Coloured. I want to leave." When Jannie heard this he gave his son a severe beating for jeopardising his chances of apprenticeship to a White trade.

But whether or not Coloureds approve of or resent those who pass, they invariably see the process as involving tragedy: "The dark children go to Coloured school and the fair ones to a European school, and then they come home and sit together around the table. How can that be right? It's breaking up families. How can that be right? Why do they have to
To sum up, this Chapter reports the claim of informants that upward social mobility among Cape Coloureds can fruitfully be conceived as proceeding along a continuum at one end of which is the farm labourer and towards the other end of which occurs a bifurcation, one branch leading to elite status, the other to White status. Persons situated at the point of bifurcation may, if their complexion is sufficiently fair, choose to pass for White. The process of passing is facilitated by cultivating the ways of the White man, by leaving towns in which the passer's identity as a Coloured is known, and by moving to a district, such as Undersuburb, where Whites and Coloureds intermingle. The act of passing evokes reactions among Coloured people varying from connivance to sharp antagonism but always include an element of sorrow.
CHAPTER III
PASSING FOR WHITE IN SCHOOLS

Those who desire to pass commonly attempt to enroll to *White* schools, such as *Undersuburb* High School. That many have succeeded in this attempt is, as shown in this Chapter, a matter of historical fact. The commonly held belief that *White* and *Coloured* children have long been totally segregated in South African schools is erroneous for, as this Chapter demonstrates, *passing* in *White* schools has been in evidence for many decades. Equally erroneous is the belief that the Nationalist Government was the first to segregate the schools: there has been a measure of colour segregation in the Cape schools for some time. There has also been a significant degree of integration, the extent of which would surprise most *White* South Africans today. This integration has persisted well into the Nationalist era in spite of vigorous attempts by successive governments, described in this Chapter, to bring it to a halt. Many *White* schools in Cape Town have, in recent years, been reclassified as *Coloured* schools because they accepted so many *play-White* pupils. It is against this background that the phenomenon of *play-Whites* at *Undersuburb* High School must be seen.

The schooling of *White* children in the Cape Province is overwhelmingly a provision of the State, though there are some private schools still under the tutelage of the churches. *Coloured* schools, on the other hand, are very largely denominational Mission Schools (in 1961 there were 140 *Coloured* schools under school boards and 1,248 Mission Schools for *Coloureds* in the Cape), though such schools are now

---

increasingly coming under the guardianship of the public school boards. The division of responsibility for schooling between the State and the churches has had profound ramifications for education in South Africa, especially since the churches, Anglican, Wesleyan, and Dutch Reformed—and the missionary societies, such as the Glasgow Missionary Society—have concerned themselves largely with the schooling of non-Whites. The division of responsibility is an old one and represents the first important step in the process of racial segregation in the schools in South Africa.

The Education Act of 1865 drew a distinction between undenominational public schools, controlled by local committees of management; denominational Mission Schools, under the control of a church or missionary body; and schools for natives. It provided that public schools be subsidised on the pound for pound principle, but that Mission Schools and Native Schools receive scaled grants. Thus, only that section of the population which could afford to maintain its own schools—the White section—could send its children to public schools. Coloured children and the poorer White children went to Mission Schools.

This Act consolidated the trend, already apparent for some time, of racial segregation in schools. Public schools had long provided for most of the White children of the Cape Colony, while Mission Schools, although patronised by a number of White children, were attended largely by Coloured pupils. In evidence laid before the Education Commission of 1863, the Rev. Mr. Faure claimed that the public schools and the Mission Schools had "... practically become separate schools for the white and

---

2Cape of Good Hope: Annexures to Votes and Proceedings of the Legislative Council for 1865, Section entitled "Code of School Regulations."
the blacks."³

The Act did not complete the segregation of White and Coloured pupils: aided Mission Schools were intended to provide schooling for the "poorer classes," White as well as Coloured. In 1883 Ross found nearly six thousand Whites in the same classrooms as 32,000 Coloured children in the Mission Schools.⁴ In 1891 there were still over ten thousand White children in Mission Schools,⁵ a figure which represented almost one-third of the total White enrolment in the Colony. According to evidence set before the Education Commission of 1892,⁶ there were at the time twenty-five Mission Schools in Cape Town, attended by "practically three thousand white children and 4,283 coloured."⁷ Even during the earlier years of the 20th Century, the Mission School Zonnebloem had an enrolment half of which consisted of Africans, the other half being White and Coloured.⁸

---

³Education Commission, 1861 (Cape of Good Hope). Minutes of Evidence, p. 152 (G.24-'63).

⁶Education Commission, 1892, First Report, p. 152 (G.9-'91).

⁷This called forth the comment: "The difficulty is to distinguish who are 'coloured' children. I should think the distribution of White and Coloured just mentioned is a very arbitrary one."

Although it was not unusual for some Coloured pupils to be enrolled to the non-denominational public schools in the towns, the complaint of the times was not that Coloureds were intruding on White schools, but that Whites were pushing the Coloureds out of their Mission Schools. This led, in 1892, to a counter-protest which rings strangely in contemporary South African ears: "I do not think there should be anything to exclude white children from a coloured school, if the parents are respectable, and they are clean and properly clothed ..."\(^9\)

So, it can be seen that by 1892 the leaders of the English-medium

churches and government officials possessed divergent views on "mixed" schooling. The English churches have throughout remained consistently relatively liberal in their attitude—in February 1958 the Anglican Synod of the Diocese of Cape Town unanimously adopted a resolution supporting the establishment of a mixed *Coloured* and *White* school. The present day government, on the other hand, would not seriously quarrel with Sir Langham Dale, who, as Superintendent-General of Education, said before the *Education Commission* of 1892, "I do not consider it my business to force education on all the aborigines; it would mean ruin to South Africa. If I could produce 60,000 educated Tembus or Fingoes tomorrow, what would you do with them?; their education must be gradual."

The debate which took place before the *Education Commission* of 1892 was so portentous for South Africa, so striking in its similarities—and dissimilarities—to the debate which rages today, that it is worth citing at length. Sir Langham Dale, Superintendent-General for the Colony, is being questioned about the proposed *fourth-class schools*, the purpose of which is "to take the White children out from among the Coloured classes."

Dr. Berry: Do you propose to give the Managers power to exclude coloured children, because there is the difficulty of spoiling the school by the introduction of the coloured element. Would it not be advisable to give the Managers power to regulate who are to be the scholars and who are not? — That is a dangerous power to put into an Act of Parliament, as many off-coloured children in Cape Town consider themselves white. I have had to deal with these difficulties

---

10 It is interesting to note that the Afrikaans churches were not always opposed to this policy. See *Education Commission, 1892, First Report*, op. cit., p. 13: "There is a very large mission at Bree Street, belonging to the Dutch Reformed Church, and there are two-thirds White children, and one-third Malay and Coloured people . . . ."

11 *Education Commission, 1892, Third Report*, p. 32.
now for more than 30 years, and it is curious how they all vanish in practice.

Apparently they do not vanish. These Mission Schools were established for coloured children, and the white children have evicted them? - The white children have pressed into them because there is no other place for them to go to.

President: Is there not the danger of the coloured children pressing into the white schools? - I do not think so; the fees would be four times as much, in the first place.

But many of the coloured parents are very well off, and they would not look to that. They have already had their children with white children and they would not like to be thrust back? - I think it would be just the other way; the coloured people complain that they are pushed out.

But it is desirable that they should go? - Yes.

Then if it is desirable that they should go, why should not the Government lay down a rule that they should not go to the schools intended for whites? - I do not think the Government would take the responsibility of saying who is Malay and who is a coloured person.

Dr. Berry: The thing is this, if you have a fourth class school, you have a number of whites and a very few coloured children. In the mission schools you have a preponderance of blacks, and the coloured children will generally go where you have many coloured, and the whites will go just as they do in the undenominational schools at present. That is the only safeguard you have that the mixture would not be so great? - The serious objection is to the mixture of the so-called Street Arab with the white girls.12

In 1893 Proclamation 388 made it possible in certain circumstances for White mission schools to be established in various centres. These were Poor Schools, established to withdraw White children from the Mission Schools,13 and which were ultimately to be absorbed into the ordinary nondenominational public schools. This was thought proper because, as Sir Langham Dale said, "It is very undesirable that White children, especially the girls, should be brought into close relations with the

---

12Education Commission, 1892, First Report, p. 16, paras. 115-124. Punctuation and paragraphing are as in the original.

13Ibid., p. 4.
ordinary type of Coloured street boy." 14 In the following year, in the Report of the Superintendent-General for 1894, there was for the first time a distinction made between White and Coloured children in school statistics.

In 1905 the School Board Act was passed, and School Boards then took the place of the old Committees of Management. It became the duty of school boards to establish nondenominational public schools and to maintain control over them. The Act also provided for the establishment of schools for pupils of "other than European parentage or extraction." Boards could apply for the enforcement of compulsory education for all White children between the ages of seven and fourteen. Prior to the passing of this Act the parents of a Coloured child could insist that the child be admitted to a nondenominational public school. After the passing of the Act it became very difficult for a Coloured child to be educated other than in a Mission School, where he did not proceed beyond the fourth standard. 15 True, the Act did not expressly exclude non-Whites from White schools, but this interpretation was later laid upon it in the Courts. 16 The judgement was, however, mitigated by the ruling that school committees were not compelled to enquire into the descent of a child seeking admission to a school for Whites if it was not obvious from appearance that the child was of other than European descent. School managers could, if they wished, wink at the admission of pass-Whites. Many did. But by the time of Union, according to the Education Commission

15 See C. de K. Fowler, School Administration, Cape Town, Maskew Miller, 1953.
16 Moller vs. Keimoes School Committee and Another, C.P.D. 1911, p. 673. Upheld on appeal A.D. 1911, p. 635.
of 1912, there were less than 550 European pupils in Mission Schools, including 6 in a purely White Mission School at Glen Lily, and 59 in a Mission School attended by only 8 Coloured children at Hermanus. Of the remainder, 211, or just half, were in the Cape Peninsula, and 50 in the school district of Springbokfontein. The Cape School Board Report of 1934, on the other hand, attributes the large increase in school enrolment up to 1914 as "partly due to the transfer of 1,000 European pupils from Coloured Mission Schools to European Schools."

A further distinction was made between Coloured and White education by an Ordinance passed at the Cape in 1918, in which separate salary scales were laid down for White and non-White teachers. In the Consolidated Education Ordinance of 1921 the distinction is made still more clear, as the whole of Part II of the Ordinance is devoted to White education, whereas Part III is devoted entirely to non-White education.

In spite of this legislation many Coloured children, especially those who were of fair complexion, continued to attend White schools. They could not legally do so without the consent of the School Board and of School Committees. While the Cape Provincial Department of Education (the responsible office of which is the Superintendent-General of Education) exercises general control, through its Circuit Inspectors, over professional and financial matters in State schools in the Cape Province, statutory school boards, the majority of whose officers are elected by voters on a Divisional Council or Municipal roll, are responsible for the management of such schools, for recommending to the Department that new schools be established, and for seeing that the rules regarding compulsory school attendance are enforced. Local school committees,

17Cape of Good Hope Education Commission, 1912, (C.P.6-1912).
consisting of persons elected by parents who have one or more children on the roll of the local school, nominate teachers for employment and admit or exclude pupils.\textsuperscript{18} The consent of the school board appears to have been obtained, according to the \textit{School Board Minutes} of March 2, 1932, ". . . When the Arsenal Road [Simonstown] School was established by the Board, it was understood that the School should make provision for such [almost \textit{White}] children as well as for those of pure European descent." A School Board official claimed that this school was "high grade," with "good uniforms and books," and that it was intended to cater for "better-class borderline pupils."

In the same School Board minutes is reported the proposal by the Board, submitted to the Superintendent-General, that both \textit{White} and \textit{Coloured} pupils be allowed to attend Silo School (Simonstown). The Superintendent replied that the proposal was contrary to law. A preceding passage in the School Board minutes implicates school committees: "In many schools for European pupils there are a number of children who are not of pure European descent, but who might pass as Europeans, more especially in schools in which there is a desire on the part of the local Committee and Principal to increase the number of pupils . . ." And the Secretary of the School Board in his \textit{Report on the Problem Regarding the Non-Admission of Pupils to European Schools in the Cape Peninsula} (1943), writes, with regard to some pupils expelled from \textit{White} schools, " . . . the Board had already taken strenuous steps to improve the position. Meetings had actually been held with the local Committees to impress upon them the necessity for exercising great care in admitting new

\textsuperscript{18}School administration in the Cape Province is lucidly discussed by C. de K. Fowler, \textit{ibid.}
children to school." So it is clear that in at least some White schools "play-Whites gained admission with the connivance of the school committees."\(^{19}\)

Even the Department of Education, as late as 1938, was not prepared to draw the line between White and Coloured very sharply. In January, 1938, the Department wrote to the Cape School Board in these terms:

Once it is clear that a child is not European it is illegal to admit it to a school for Europeans. It is a matter for policy whether the eyes should be closed to any such cases. If and when application is made for admission of a second or third child, own brother or sister of a child already admitted, it becomes clear that one or other parents is not of unmixed European parentage or extraction, then legally all the children must be excluded. However, if it is a borderline case and one or more children have already attended school for a considerable time it would be more equitable to leave them.

The Cape School Board regarded itself as still bound by this ruling until the end of 1957, and some school committees, even now, continue to act as if the ruling remained valid.

It was in 1933 that the Cape School Board began to experience "much difficulty regarding the non-admission of pupils to European schools."\(^{20}\) In February, 1932, the Superintendent-General informed the Cape School Board that no provision was made in the Ordinance for "slightly Coloured" children, and said that any such cases must be

\(^{19}\)That a parallel situation may have developed in Southern Rhodesia is indicated in C. A. Rogers and C. Frantz, *Racial Themes in Southern Rhodesia*, New Haven, Yale University Press, 1962, p. 2831: "Some school teachers also speak knowingly about the number of children in their schools who 'pass for White,' although their neighbours are not always unaware of their ancestry."

classified as *Coloured* and sent to a *Coloured* school since, in the judgement of Lord de Villiers, "European parentage or extraction" meant unmixed "European parentage or extraction." Moreover, the Board's attention was drawn to the fact that the Arsenal Road School (a *White* school which had been admitting *pass-Whites*) was graded by the Department as a *European* school, the teachers were paid salaries as though the school were a *European* school, and the Province drew a subsidy on the basis of the school's being a *European* school. The Board was asked to furnish the Department of Education with a statement regarding any of the schools under its control, professedly set apart for *Whites*, but to which pupils known to be "slightly Coloured" had been admitted.

There were at least five so-called "buffer schools" catering for "borderline cases": Arsenal Road, Simonston; Broad Road, Wynberg; Sydney Street, Cape Town; East Park Primary, and Anderdale Primary. A senior official of the Board told me that "When these children that we tried to pretend didn't exist came to us we said: 'Why not try Broad Road or Sydney Street?'" "Buffer schools" such as these existed, according to a report of the School Board "without the sanction of the authorities but with no direct interference from them." In contradistinction to this assertion, a most reliable informant told me categorically that these schools were set up by the Superintendent-General, at the request of teachers' organizations, quite explicitly to cater for

---

21Keimoes Case, *op. cit.*

23School Board Secretary's report, *op. cit.*
"borderline cases."

In 1934, "as the Department insisted on a more rigid interpretation of the term European descent in terms of the law," the Cape School Board converted three schools, Broad Road, Sydney Street, and Arsenal Road from European to Coloured, removing the Europeans elsewhere. This involved the transfer of some 30 pupils from the Arsenal Road school. In the two other schools there was practically no transfer of pupils necessitated by the change.

The closure of these schools as White schools was recommended by a sub-committee of the Board, whose report on the matter concludes with the words: "As for the rest [other White schools which had admitted 'slightly Coloured' pupils] your Committee are of opinion that drastic action at this juncture is impracticable and might lead to justifiable opposition." 25

A few years later it was discovered that certain other schools would also have to be changed, and the closing of some of these as White schools only served to make matters more difficult for the Board. East Park School (Cape Town) was closed as a White school, as was Anderdale Primary, and the portion of the children who were European transferred to other schools.

As a result of the Department's decision to take action in one instance, the school Principal and the School Committee, after

24 Cape School Board Annual Report, 1932.

25 School Board Minutes, 6/7/32: "Report of the Special Committee Regarding the Admission of Slightly Coloured Pupils to Schools." Similar extensive reports are recorded in the Minutes of 6/7/38; 2/8/39; 6/3/40; 1/12/57.

26 1940. Feldhausen Primary, now Grove Primary.
investigating each child, evicted more than 70 children—that is, more than a third of the enrolment—from the school. The Department then established a Coloured school at Newlands to house these children, but only 25 of the 70 were admitted. No record of what happened to the remaining 45 is available. After three years this school closed down altogether and the parents refused to send their children to a school where they would have to associate with Coloured children.

In 1940 the relevant rules regarding the admission of pupils to European schools were amended, thus:

It shall be the duty of the principal teacher and the committee of any school set apart for pupils of European parentage or extraction to satisfy themselves that the school is being attended only by such pupils; and the committee shall exclude from the school any pupils whom it considers not to be of European parentage or extraction.

It shall be the duty of the board to satisfy itself that the committees of the schools under its jurisdiction set apart for pupils of European parentage or extraction are carrying out the provision of these rules.

Appeal from the decision of the committee, whether such decision relates to the admission, the retention or the exclusion of a child from the school, shall be made to the board concerned and, similarly, appeal from the decision of a board shall be made to the Superintendent-General of Education.

It shall be competent for a committee or a board of the Superintendent-General of Education to require proof of the European parentage or extraction of a child; and the onus of such proof shall lie on the parent of such child.27

27"Rules Regarding Pupils in European Schools and Students in European Training Colleges," as published in the Education Gazette, May 23, 1940. This clarifies the position as outlined in the Rules published on August 14, 1924. No changes in substance are in the subsequent amendments of July 30, 1942; November 1, 1945; and November 29, 1956; but on May 30, 1957 significant changes were made regarding student teachers in training colleges (subsequently further amended); and in 1963 it was laid down that a child should be accepted at a White school if both parents had White identity cards and if the child's birth certificate described him as White.
No doubt at all was left as to what procedure should be followed; and in any doubtful cases the onus of proving themselves of "European parentage or extraction" lay clearly with the parents of the child. Moreover, it became the duty of the Principal and the Committee and the Board not only to exercise great care in admitting pupils to their schools, but also to exercise care regarding pupils already enrolled.

As a result of these amendments to the regulations some 30 pupils were excluded from three primary schools at Parow, near Cape Town. Here, again, a new Coloured school was commenced, in a hired building, for those so eliminated. The opening enrolment was 26—three years later there were only 12 pupils in the school. The Raymond Primary School at Vasco excluded 25 children, some of whom had been attending the school for five or six years.

These amendments did not bring the Board's problems to an end. In Cape School Board Annual Reports of the 'forties and 'fifties it is asserted that a great deal of the Board's time was taken up with "non-admission cases." Especially loud complaints were made in 1952 when "the position regarding such non-admission cases became more acute than ever" and in 1958 when "The Board found even greater difficulty than in the past in dealing with such cases under the terms of the 1956 Education Ordinance." A further report on the problem was submitted to the Board on December 1, 1957. It noted that "... a large number of Coloured pupils have been enrolled to European schools." The 1962 Report indicates that the Board dealt with 39 "non-admission cases" during the

28 Of p. 71.

After 1940 the Board continued converting White schools into Coloured schools. When the Salt River Primary (Dryden Street) was closed as a European school in 1952, 341 pupils left. The Cape School Board states that 111 of the 341 pupils were obviously of "European parentage or extraction," and these were admitted to the Victoria Walk Primary, Woodstock; 43 of the remaining 230 applied for admission to White schools. Thirteen were admitted to Victoria Walk after investigations of the School Board, and the other 30 applicants were rejected. Applications were not received by the Board from the remaining 187 pupils.30

Between 1932 and 1956 at least 14 White nondenominational schools under school boards in the Cape Peninsula were reclassified Coloured. All these schools were situated in areas which were once White residential areas but are now predominantly Coloured, and all are known to have accepted at least some play-Whites. Of six of them it can be said with assurance that a major reason for their reclassification was the fact that they had accepted so many play-Whites.

It may be that these schools represent only the top of the iceberg. The schools we have discussed so far have all been public schools, not private church schools. Yet these Roman Catholic, Anglican and Methodist church schools are reputed to have accepted pass-Whites more readily than State schools. Unfortunately, no records of relevance have been made public. In addition to established church schools, transient fee-paying nondenominational schools, set up especially to cater for pass-Whites who had experienced difficulty in enrolling to State schools, are known to have mushroomed for a period all

30 Records of the Provincial Council, March 5, 1954.
over the Peninsula. One such "marginal" school in Woodstock was closed in May, 1953. In the School Board minutes of July 1 of that year it is stated that the parents of the children enrolled to the school were notified that before their children could be admitted to a White school the "usual documentary proof of pure European parentage and extraction would have to be furnished. Replies had been received from some 15 parents, but no replies had been received from approximately 50 of the families."

This then is the background against which the phenomenon of pass-Whites at Undersuburb High School must be viewed. How the school attempts to cope with it is described in Chapter V. But first, in Chapter IV, we examine the declining enrolment of the school, a consequence of the "bad name" the school has acquired.

33See also reports in the Cape Argus, June 22, 1953, and in the Cape Times, December 3, 1953.
CHAPTER IV

ENROLMENT OF UNDERSUBURB HIGH SCHOOL

While the enrolments of pupils at schools in Cape Town have increased markedly in the last few decades, those of the Undersuburb schools have declined, and that of Undersuburb High School more than most. Not only has the number of pupils in Undersuburb declined but so also has the socially-defined quality of pupils: the school contains a proportion of swarthy Afrikaans-speaking children of limited academic ability, who score low on intelligence tests, and who come from working-class homes in which they acquire patterns of behaviour and ambitions somewhat at variance with those of their teachers.

The number of White pupils in day schools of all types under the school board of Cape Town increased as shown in Table I, from about 22,000 in 1930 to nearly 32,000 in 1960. Note that no comparison should be made between the year 1950 and the preceding years as the schools in the Cape Division were divided between the Cape and the Parow School Boards in 1950.

\textsuperscript{1}Cape School Board Annual Report, 1962, Appendix D.
Comparable figures for White schools in the area which borders on Undersuburb, show a percentage increase of approximately 25 for the years 1930-1960, while those for the area contiguous to the last show a percentage increase of approximately 115. These increases are to be accounted for partly in terms of population growth, and partly through the introduction of "free" schooling for White pupils up to the age of 15 in 1930 and to Standard 10 in 1949. The enrolment at White secondary and high schools under the school board of Cape Town increased, during the same period, from 5,446 to 10,122, a percentage increase of 85.86. This particular increase can be accounted for partly by the fact that in 1953 Standard 6 pupils were transferred to secondary schools, and partly by the increased holding power of the secondary schools.

Taking the average enrolment of Standard 6 pupils as 100 per cent, the proportion of pupils in Standards 8 and 10 from 1940 to 1960 increased from 52 per cent to 74 per cent and from 26 per cent to 38 per cent respectively. The details are as follows:

This increased holding power can be explained partly in terms of increased

2The South African Standard is comparable to the American grade and the English form. Standard 10 is the senior matriculation standard in South Africa and normally consists of children of about 17 years of age.

3These, and other figures given in this section, are, unless otherwise stated, drawn from the annual Bulletin of Educational Statistics, National Bureau of Educational and Social Research, Pretoria.
provision for "free" schooling; the fact that the minimum school-leaving Standard was raised from Standard 6 to Standard 8 in 1951; labour legislation which lays down that an apprentice must be 15 years old before he can be registered; higher educational requirements demanded by employers for certain types of work, etc.

In marked contrast to these increases, during the period 1940 to 1960 the enrolment of pupils to Undersuburb High School declined by over 40 per cent, and the enrolment of most other White schools under the Cape School Board in the area also declined sharply.

TABLE III: ENROLMENT TO SCHOOLS IN UNDERSUBURB AREA, 1940–1960

In view of this decline it is hardly surprising that two schools in the area were closed as White schools and converted to Coloured institutions.

4 Abstracted from various report(s) of the Cape School Board.
Undersuburb High was the hardest hit high school in the area in terms of its average enrolment seen as a proportion of the combined average enrolments of the three high schools of the area, its share dropping from approximately 30 per cent to approximately 20 per cent.

**TABLE IV: UNDERSUBURB HIGH SCHOOL ENROLMENT AS A PERCENTAGE OF TOTAL HIGH SCHOOL ENROLMENT IN UNDERSUBURB AREA (OMITTED)**

The decline in enrolment to the Undersuburb schools cannot be accounted for with any precision, for satisfactory information is not available concerning either the relative sizes of the White school-going age groups at different periods or the proportion of these age groups which in fact attended school. It is however, quite clear that there has been a marked decline in the total White population in the district.

**TABLE V: DECLINE OF WHITE POPULATION IN UNDERSUBURB\(^5\) (OMITTED)**

However, the decline of the high school population, in relation to

\(^5\)These figures, accompanied by maps, are discussed in some detail in Appendix C. (omitted)
the decline of the total White population, has been somewhat dispropor-
tionately high. During the years 1946-1960 the total White population
approximately 25
decayed by / per cent, while the high school population (Standards
about 30
7-10) declined by / per cent between 1945 and 1960.
Undersuburb's

The decline in White population is significant because
High
Undersuburb is almost entirely dependent on the local population for
its intake of pupils. It draws the overwhelming proportion of its chil-
dren from within a radius of three-quarters of a mile from the school
buildings. The following table shows the percentages of pupils' house-
holds which fall within various distances of the school buildings.

</table>

It is true that the proportion of children drawn from outside this
radius has increased, but, by and large, the children who come from out-
side the area are those whom other schools do not want. Of the children
who entered Standard 6 in 1960 and 1962 (the only years for which reliable
information is available) and who lived more than a mile from the school
buildings, all were either very dark of complexion or had been, as far as
could be ascertained, expelled or "removed" from other schools.

---

6See also Appendix D. (omitted)
Generally speaking, schools other than those with exceptionally high social status do not draw pupils from outside their immediate vicinity unless enrolment declines drastically and Principals take all-comers in order to maintain numbers.

The building of new schools in nearby suburbs and the extension of older schools in the vicinity has enabled many children to seek schooling elsewhere. The Department of Education is unwilling to disclose adequate information on this matter, but the number of children who can be seen leaving the more prosperous parts of the area in the morning dressed in uniforms of schools in other suburbs is sufficient indication that the number of Undersuburb children who go to school outside the area is far from negligible.

Such was the exodus to schools outside Undersuburb that the School Committee of Undersuburb High requested the Cape School Board to make it compulsory for children to attend the high schools nearest their homes; and the Principal reiterated this request in a special report to the Department of Education later. The request was not granted. There remains no restriction on the placing of children in schools other than a domestic ruling of the Cape School Board, the purpose of which is to channel those who apply for free school books into the schools nearest their homes. As far as can be ascertained the Undersuburb children seeking secondary education outside the Undersuburb area do not apply for this service.
The incentive for the better-off children in the area to seek schooling outside Undersuburb has increased since the suburb and its schools fell from grace. Undersuburbers are manifestly embarrassed by the fact that they live in Undersuburb, and apologise for it lamely: "I don't know why Undersuburb should have such a reputation." They are aware that such publicity as the area gets in the city press is almost invariably adverse, and they resent it.

Many Undersuburbers protest that they are "moving out soon"—but, on account of poverty, "soon" often means many years hence. However, "moving out" can mean, in the words of a local school Principal, "moving out through their children." That is, parents vicariously move out of Undersuburb and up the social scale when they send their children for secondary schooling outside the area.
Undersuburb High has been especially hard hit in this process of "moving out" if only because both in name and in geographical location it is the school most closely identified with Undersuburb. The School Committee are aware of this, and changed the name of the school because the name had become associated with an area which has fallen into disrepute. Parents complain even now that "as soon as employers hear the name of Undersuburb High they seem to change their minds."

This is hardly surprising in view of the particularly adverse newspaper publicity the school has received. Hence, perhaps, a mother's complaint that "Sometimes I'm even ashamed to tell people that my children go to Undersuburb High. I cry to think that my children have to go to a school where they come under that sort of influence."

The poor holding power of the school as compared with other schools in the Province can also be accounted for partly by the attraction which the prospect of early school leaving has for Undersuburb children, for they mostly come from low-income families in which the wages of a minor make a substantial contribution to the household budget. The relative ease with which persons of minimal schooling could obtain
employment in the post-war years induced many pupils to discontinue high
school education as soon as this was legally permissible.

There is in any case no family tradition of lengthy education in
High Undersuburb. Undersuburb/ parents are evasive on the subject of their own
schooling and it was thought impolitic to press the point. "Things were
very different in my day—I never had much of a chance," they said. Many
explained their poverty in terms of their relative lack of schooling and
expounded upon their own experiences as a warning to their children, but
none insisted that the children remain at school beyond Standard 8. The
lack of family schooling tradition and of parental ambitions for the pro-
longed training of their children is probably a factor of some importance
in determining the early age at which the children leave school. Observ-
ers have noted the importance of this factor in other countries. 7

Most children, in response to the questionnaire conducted in the
school, indicated that they desired to leave school "as soon as possible"
—at 16 or 17, which usually means after having passed Standard 8. Just
under 60 per cent said they would take up employment immediately on
leaving school and without further training. Just under 30 per cent
indicated that they would be taking evening classes at technical college,
studying a trade or short-hand typing. Eight per cent expected to study
full-time at a technical college. None expected to go to university. A
handful were "not sure," or thought they would stay at home.

The number who leave Undersuburb/ prematurely varies from year to
year but is always high. In one recent year at least

of the

11 per cent/pupils quit school for good after their 16th birthday,

---

7 See, for example, J. E. Floud, A. H. Halsey, and F. M. Martin,
but before passing Standard 8.

Not only is the school unable to attract a due number of pupils, or to retain them a suitable length of time, it is also unable to attract pupils of a socially defined "good" quality. Wails the Principal, "We have to recruit what others do not want."

According to the group test taken by the Departmental Psychologist in two recent years, there was not one pupil in Standard 6 with an IQ above normal. Of the pupils tested approximately 63 per cent had an IQ of less than 88 (Dull Normal); approximately 14 per cent were below 75 (Mentally Retarded); and some were as low as 55. Of the pupils in Standards 6 and 8 tested in a later year, approximately 60 per cent obtained a score of below 88.8

The low scores obtained in intelligence tests are paralleled by poor academic results, thus:

8The relationship between measured intelligence and innate capacity is a controversial issue. Many writers have attempted to demonstrate that IQ tests have biases built into them favourable to upper and middle class students. See, for example, K. Eells, et al., Intelligence and Cultural Differences, Chicago, University of Chicago Press, 1951.
About one out of four take the normal three years to pass from Standard 6 to Standard 8. The number of academic repeaters is reflected in the extraordinary age range within each Standard, thus:

The pupils which the school attracts are of poor quality in terms of low results obtained in intelligence tests and in academic tests. They are also of "poor" quality as socially defined: as described in Chapter I they are lower-class—that is, from the poorest section of the White population—and many speak English with a traceable Afrikaans accent. But of greater significance in this last respect are their dusky complexions. How the school attempts to cope with the problem of pass-Whites is the subject of the next chapter.
CHAPTER V
PASSING FOR WHITE IN UNDERSUBURB HIGH SCHOOL

Undersuburb High School is a "buffer-school" and ever since its inception it has had to contend with "borderline-cases."¹ How did it cope? Until the amendment, in 1963, to the regulations concerning the admission of pupils, the Principal scrutinised each child applying for admission to his school together with a parent (usually the mother) at a preliminary interview. If both parents were in appearance obviously White the child might be admitted, provided there was a place for him,² and he was not in other ways unsuitable. If one or the other was obviously Coloured in appearance, admission was refused. In case of doubt the child and both parents were interviewed by the School Committee, sitting with the Principal, who attempted to establish the race of the child. Should they refuse the child, the parents had the right of appeal to the School Board, then to the Superintendent-General of Education, and from him to the Supreme Court.

How was the race of a "borderline" child established? The answer is not a simple one, for the Superintendent-General, prior to 1963, was not bound by the decision of the Director of Census and Statistics, and,

¹For a brief mention of pass-White pupils see B. M. Kies, The Policy of Educational Segregation and Some of its Effects Upon the Coloured People of the Cape, unpublished thesis, University of Cape Town, 1939, p. 75.

²As enrolment declines so does the number of teachers appointed to the school.

indeed, the touchstone of Whiteness employed by him was even more demanding than that used by the Director.

The Education Ordinance of 1921 laid down that the onus was on the parents to prove that they were of "European parentage or extraction." In the Ordinance of 1956 the definition of European was brought into line with that of the Population Registration Act, vis: "European means a person who in appearance obviously is, or who is generally accepted as a White person, but does not include a person who, although in appearance obviously a White person, is generally accepted as a Coloured person." Officials of the Department of Education say that the point of the revised definition in the Ordinance was that the burden of deciding difficult cases for admission should no longer fall on the shoulders of the Department, but should fall into line with classifications made under the Population Registration Act. But it was still up to the Superintendent-General to decide, once the classification had been made by the Director of Census and Statistics, whether or not he agreed with the ruling for educational purposes. No provision existed under either the 1921 or the 1956 Ordinances to enable the Superintendent-General to delegate to some other person or body his duty of deciding an appeal on race classification from the School Board. He is explicitly empowered by the Education Ordinance of 1956 (p. 104) to "make rules governing the admission, enrolment, attendance, transfer, withdrawal, exclusion and expulsion of pupils in any schools (other than training colleges) for European pupils." The final say regarding the admission of children to White schools rested therefore with him (subject to appeal to the Supreme Court) and not with the Director of Census and Statistics.

The Administrator said in the Provincial Council in June, 1959, that if parents held White identity cards, then, as a general rule,
their children would be admitted to White schools, though if a child of parents holding White identity cards associated more with Coloured children than with White, no harm would be done by sending this child to a Coloured school. A senior official of the Cape School Board suggested "off the record" that the real reason why the Department was not necessarily prepared to accept a child both of whose parents had White identity cards was that the child might be a "throwback" and appear "obviously Coloured." It appears that the Department wished to leave itself a loophole should a child whose parents satisfied the requirements of the Population Registration Act be nevertheless considered an undesirable pupil through association with Coloured children.

The Minister of the Interior, in reply to the second reading of the Population Registration Bill, said in the House on March 16, 1950 that "The test [for a White person] that is laid down in this Bill is the test of appearance and of usual associations. There is no question of descent or of blood." But, according to Mrs. C. Taylor, sometime member of the Cape School Board and of the Cape Provincial Council,

In a letter addressed to the legal advisors of a man whose case has been considered, the Superintendent-General of Education said on November 8 [1956]: "While I do not feel called upon to discuss with you what factors are to be borne in mind in determining these cases, I would state that I am aware of the leading decisions of our courts, including those to the effect that descent is the test and that appearance, whatever its probative value, like other factors, may afford evidence of descent." There is no mention here of association.

The retention of the criterion of extraction was made even more clear in instructions given to the Board by the Department in April,

---

3\textit{Hansard}, Col. 3419.

1956:

... I have to say that in terms of the Department's rules regarding the admission of pupils to schools for European pupils, the onus of proof of the European parentage or extraction of a child lies on the parent of such child.

While it is difficult to catalogue all the factors that a school committee or board should take into consideration in order to reach a decision whether a particular child may be admitted to a school for European pupils, the following are of importance

(a) the appearance of the child

(b) the appearance of the parents, the schools they attended, whether they live amongst Europeans or amongst Coloured, whether they associate with Europeans or with Coloureds, the capacity in which the father is employed;

(c) whether the grandparents of the child are/were in each case accepted as Europeans.

The parents should be asked inter alia to submit their own birth and marriage certificates and those of the grandparents.5

Thus it would appear that, while the Director of Census and Statistics requires merely that a person should appear White and be accepted as White before bestowing upon him the benefits of a White identity card, the Superintendent-General, using the same definition of a White person, required not only that these conditions be met before admitting a child to a White school, but also that the parents of such a child establish his "White parentage or extraction" and that parents be asked for their birth and marriage certificates, and for those of the grandparents.6 School committees followed his lead and enquired into ancestry.

How did the School Committee of Undersuburb decide on the classification of "doubtful cases"? Where such cases were referred to the School Committee by the Principal, they invited both parents and their child (or children) to an interview. Should either parent not have attended this interview, the child was almost automatically refused admission, it being assumed that the non-attendance of one parent was an admission that he or she was not White. Should both parents have attended they might have been required to furnish birth certificates, and to supplement these by statement by people of standing in the community to the effect that they were normally accepted as Whites. Committee members also made use of their own personal knowledge of the area in an attempt to assay the race of applicants for admission to the school.

These interviews were held in camera, so it is not possible to say with confidence on what basis children were classified by the School Committee. Some indication is however given by Committee minutes and correspondence between the Principal and the School Board.

Of the 207 applicants who were refused admission to the recent school during two years on the grounds of colour, seven were rejected because one or more of the parents did not present themselves before the Committee, while the remaining 13 had appended to his or her name the comments, "appearance against," "appearance unfavourable," or "appearance not acceptable." Additional reasons were cited in nine cases: "previous

---

7There is good reason to believe that the actual number refused admission on the grounds of colour is in excess of 20. Children rejected without reference to the School Committee are not included in this figure, nor are those rejected on other, ostensible, grounds. In order to forestall appeals, and the possible success of such appeals by the Board, the Principal is extremely reluctant to admit, even verbally, to the Board that a child has been refused admission on grounds of appearance.
members of family were refused" (3); "appearance of father" [or mother] (2); "outside our area" and "living in predominantly non-European area" (3); and "brother unsatisfactory." It should be emphasised that these are merely the reasons which the school administrators have chosen to put in black and white (albeit sub rosa), and that they might or might not be the real reasons.

Prior to 1963 disagreement obtained between Committee members on the classification of children. Of the 20 decisions to reject a child, discussed above, only 10 were unanimous. These decisions concerned the children whose parents did not present themselves before the Committee, those who "lived outside our area," and one whose brother was "unsatisfactory." Eight decisions were recorded as "almost unanimous" or as carried with a majority of five or six out of seven. One case, which concerned brothers, one of whom was described as "passable" and the other as "not acceptable," resulted in a three-four split. The voting on the remaining instance is not recorded.

It might be noted that each of these rejected children attended local White primary schools, and that three of them had been enrolled to nearby White high schools, and that another three had siblings who had been, or who were at the time, enrolled to Undersuburb High.

Reliable information concerning the number of children refused admission on the grounds of colour is not available but, according to the same source of information, and subject to the same qualifications,
the number rejected for the years 1952 - 1959 were:

Disagreement obtained about the classification of children not only between the Committee members themselves but also between the Committee and the School Board. There exists, in the form of correspondence from the School Board, a record of the appeals of two of the children rejected in one recent year, both of whom were described as "appearance unsatisfactory."

**Case A**

It is noted that his brother is already enrolled at your school. Although he is dark complexioned, the Board had, from very careful investigations established at an interview with the Rev. (X) that the father, now deceased, was employed as a European. The family is very closely linked with church activities. Would you now accept . . . ?

**Case B**

As a result of investigations made and after an interview with the parents, when both sons were present, the Board decided that (B) is dark but both parents are in possession of European birth certificates, and as far as the Board has been able to establish, the family has European associations. The children also attend the Presbyterian Sunday School. Under the circumstances I am directed to ask whether you would now be prepared to admit (B) to your school.
or to the Superintendent-General, during that or any other year, is not disclosed, but it is certainly small, if only because of the considerable legal expenses which the financially poor parents would incur if they pressed their case with any vigour, and because the procedure is, in any case, not without its risks. The moment the Department asks the Director of Census and Statistics for information about an appellant there exists, by implication, a doubt about the appellant's classification in terms of the Population Registration Act. This would have more widespread effects on the appellant than an obligation to change schools. That being so, the Director, acting under Section 5(3) of the Population Registration Act, is empowered to initiate an enquiry into the race of the appellant and to alter, without giving reasons, any classification he had already made. Moreover, the parents of rejectees, whether they have been summoned before the Committee or not, are not informed of the real reason for their rejection—they are normally told simply that the school is full. Not even the School Board—to whom the Principal has been instructed to disclose the reason for each refusal—is told unequivocally that a child has been refused on the grounds of colour: in correspondence addressed to the Board the Principal covers himself by claiming that "In the first instance, inability to accommodate is the reason for refusal." In answer to verbal queries from the Board the Principal is reticent. "He led me to the brink," he said, recounting his response to such a query, "but I wouldn't say it. I told him we were full up with 30 or 40 in each classroom and we weren't prepared to take anyone until we got an increase of staff. Mind you, he must have taken one look at the boy and seen there was less milk than coffee and known perfectly well that wasn't my reason, but he couldn't say so."
The reason for such reticence on the part of the Principal and Committee is that appeals to the Board are (they say) so often successful—so often that, according to a senior official of the Board, the Board was "deeply suspect by the authorities." This has had the effect of lessening the confidence of parents in the Committee, and of lowering the morale of the Committee itself. The effect is exacerbated when, as has occasionally happened, the rulings given by the Board are inconsistent with one another. In one case, the Board, having rejected the appeal from the decision of the Committee of one boy of dark complexion and St. Helena descent, later forced the Principal to accept his sister, who had already been refused admission to "all" White schools within and without reasonable distance of the girl's home.

The success of such appeals has led to a certain amount of friction between the Board and various School Committees. Principals have sometimes refused to take a child into a White school in spite of instructions from the Board.8

The success of such appeals has led also to the enrolment to High Undersuburb of some of the darkest children in the school. Complained the Principal, "There are some children who should never be here. They are the wrong type, and they affect the others. But I can do nothing. All the darkest children I have here have been forced on me by the Board."

Many appeals concerning the decisions of School Committees in the Cape Peninsula do in fact reach the Cape School Board. In answer to a question, put to the School Board and to the Department, by a member of the Provincial Council on the author's behalf, it was claimed that from

---
1950 to 1960, inclusive, "roughly 50" appeals reached the Board. How many were granted is not disclosed. The same sources state that appeals from the Board's decision to the Superintendent-General numbered "not more than one or two per year." Again, the number of successful appeals is not disclosed.

The figures cited in the previous paragraph do not appear to be wholly consistent with a statement by the Secretary of the School Board:

Since his appointment as Secretary to the Board, nine years ago [1934] the undersigned has had to deal with literally hundreds of cases... Out of all these hundreds of cases the undersigned can remember only possibly three or four cases where the Board finally disagreed with the Committee and instructed that the child in question should be admitted to a European school. In a few isolated instances appeal has been made by the parents against the Board's decision, to the Department. The undersigned is unable to quote more than one instance where the Department has not fully upheld the Board and the Local Committee in their action.

The discrepancy between these estimates might in part be accounted for in terms of the different periods they cover—apartheid legislation has been made more stringent since the Secretary wrote his report—though it should be noted that complaints were voiced about a number of appeals in the Annual Report of the Cape School Board, not for the period 1934 - 1943, but for the period 1947 - 1956. Another factor which should be taken into account is the very large number of appeals which, I am told, are settled over the telephone and which do not appear in the Board's Minutes.

When identity cards came into general use in the late 1950s controversy diminished at Undersuburb / Few who were not in possession of

---

9 This reply is not inconsistent with the reply given by the Administrator to a question asked in the Provincial Council on May 28, 1959.

White cards applied for admission to the school and so fewer "doubtful" cases had to be considered by the School Committee. The problem presented by parents who had not understood instructions, who had not produced adequate documentary evidence as to their Whiteness, or whose progenitors could not be traced, was largely obviated. Moreover, the Board appeared to have been insisting that all children whose parents were in possession of White cards be accepted. The School Committee thus considered themselves very largely relieved of a source of great embarrassment and dissension, which in the past had led to resignations from among their number, and to a great deal of personal unpopularity.

Since an "objective" criterion for admission was established, the vituperation once heaped upon the School Committee and the Principal of High Undersuburb has been deflected on to the shoulders of those responsible for the framing of the regulations. The Principal is now able to say, with some satisfaction, "There are those who say it is a rotten school and go on saying it: they become vindictive; they hate my guts. I don't blame them, really. But the vindictiveness is slowly being directed towards the Department rather than me nowadays as people know that it is the law rather than me personally. I can talk to them now. The law demands this . . . ."

Yet in spite of the manifest attractions of basing decisions entirely on the possession of White identity cards, the Principal and School Committee still reject children on the grounds of appearance alone.¹¹ As we have seen, many persons of dusky complexions are in

¹¹The anomaly is the subject of several newspaper articles. See, for example, Cape Times, February 7, 1963; February 8, 1963 ("what is obvious to the eye is not always on the identity card . . . ."); and Cape Argus, February 8, 1963.
possession of White identity cards. This has led to the enrolment of dark High children to Undersuburb /who in former years would have been refused ad-
mission. Put in the case of very dark children the Principal still puts his foot down and refuses to admit the child. "I had Coloureds in here," he said, "and as soon as they came in the door I sent them out the door. Plack as the Ace of Spades, and they're living with Coloureds. 'Fut,' he said, 'I've got a White ticket and I want my son in a White school.'

Goodness only knows where they get them. Came from a Coloured school. Some have even been to Standard Seven in a Coloured school and want to get into my Standard Eight."

Whether or not to accept such children is still—in fact, if not in theory—largely a matter for the Principal's discretion. Said one school Principal, "I have now a dozen children in my school who on paper are non-White, but who, by association are White in every respect." But he remained concerned about swarthy complexions: "I can accept that child," he said, "but what do I do when I have a school function and the rest of the family comes along?" 12

Just as it remains largely a matter for the discretion of a Principal to reject children with White papers but dusky complexions, so is it a matter for his discretion to accept children who lack White papers (but do not have Coloured papers) and are of fair complexion. Here is an illustration. In the early 1950s the first of three daughters of a White father and a Coloured mother was admitted to Undersuburb High without having been asked to produce her birth certificate for she was

White in appearance. The fact that her mother was Coloured was discovered by a Cape School Board Attendance Officer when he investigated the absence from school of the youngest daughter. The child was not removed from the school though the Attendance Officer threatened her that if she did not attend school regularly he would "ask for [her] identity papers."

School Committees seem less concerned with the letter of the law than is the Board (they are not so concerned with "parentage or extraction") but they are more insistent than is the Board that a child of "doubtful" appearance be not admitted to their schools.

It seems likely, though it cannot be established with any certainty, that the School Committee of Undersuburb High is even more fearful of admitting swarthy children than are the committees of most other schools. At least some children who have been refused entry to Undersuburb High have eventually been enrolled to other schools, such as the South African College Boys' High School, of considerably higher social standing. It is said that such schools, long before the amendment of 1963, were accepting white identity cards at their face value, while the Principal of Undersuburb High still turned away "doubtful cases," "white ticket" or no "white ticket," because "I don't want the school to get the reputation."

Such is the Principal's determination to exclude dark children that he is prepared to court considerable friction between himself and his feeder schools. A search through the records of school correspondence reveals a profusion of memoranda addressed to the Department and to the Board complaining that his feeder schools were accepting children of penumbral complexion. In the 1940's he wrote that he felt it unjust that he should be "put into the position of having to refuse
pupils into secondary standards who have already been four or five years in a so-called European school. . . . I strongly urge the Department to look into this matter in respect of our primary schools so that the terrible injustice and humiliation now inflicted upon so many innocent lives shall be avoided."13

The Principal is prepared to alienate not only the Board and his feeder school, but also Coloured Undersuburbers. When the Western Province Land Tenure Advisory Board deliberated upon the future Group Areas Undersuburb zoning of , he sent a teacher to represent the interests of the school. This is his account of the proceedings:

They were going to zone what obviously looked a Coloured area Coloured. They said if the majority are Coloured then it is a Coloured area. Mr. X. [the teacher ] said, 'Are you going to contradict your own census returns?' [which only just gave the Whites the edge over the Coloureds]--so they zoned it White. When I heard that I said 'Hooray! the school is saved!'

The Principal's delight at this decision is echoed by the other teachers: "From our point of view the Group Areas Act was a godsend. It'll turf out some Coloureds, damn dagoes, and fishermen, Syrians--and they're not up to much--and Portuguese types."

But for all that, wails the Principal, "It's made very little

13One of the most frequent of such humiliations is the often considerable period of waiting which "borderline" children sometimes endure while their parents attempt to enrol them to White schools. See Cape Times, September 5, 1961, and July 21, 1958; and also M. Horrell, 1958, op. cit., pp. 57-58.

14This attempt was supported by the Principal of another White school in the area , by the Minister of the local Dutch Reformed Church, and by the local branch of the National Party.
difference. The Board still sends me Coloured children. And once they've got their cards there is no arguing with them."

It would appear then, that the Principal is less liberal in his interpretation of what constitutes a *White* person than is the Department, the Board, the Director of Census and Statistics, the Western Province, Land Tenure Advisory Board, his feeder schools, and, probably, many schools in Cape Town. This is not because he is a man without liberal inclinations. He is conscious of the humiliations and deprivations attendant upon government policy. He is troubled by the role he is called upon to play as an arbiter of the *race* of a child. Why then is he so insistent on the exclusion of "borderline" children?

The Board has to administer a school system according to bureaucratic regulations; the consequences of these regulations do not affect them as intimately as they do the staff and School Committee of Undersuburb High. The school Principal is therefore called upon to exercise comparatively greater vigilance than the Board. To the Board the admission of a dark child to a *White* school means, perhaps, little more than a tick beside yet another name on yet another piece of paper; at most it means that they have succeeded in solving the difficult problem of enrolling the child at a school, as they are legally bound to do. For them there the matter rests. For the Principal, however, the child represents a sinister threat to the *White* status of his school, to his ability to attract teachers and pupils of sufficient number and satisfactory quality, and, ultimately, to his own personal prestige.

The teachers of Undersuburb *High* are aware that in recent years a number of *White* schools in the area have been reclassified as *Coloured* "because the Principals were so kind-hearted." Rumours continually circulate to the effect that the same fate is about to befall them.
Teachers claim that "the Department is always the one to push. Inspectors say 'If you accept these children then when we come round again we will recommend that the school be made Coloured'." They are therefore anxious to exclude all "in-betweens."

Even if the threat of reclassification as a Coloured school were a figment of the imagination, the Principal and his teachers would still not wish their school to become a refuge for pass-Whites, for, like most White South Africans, they recognise the lowered status of the Coloured people vis à vis the Whites, and many support the government policy of apartheid. Moreover, they believe that non-Whites make inferior students, and attribute the low academic standing of the school to the presence of Coloureds in the classroom.

As to the possibly more liberal policy of admissions among schools of superior social standing, accommodation in such schools is in such demand that they are free to pick and choose their pupils and, besides, few pass-Whites can afford their fees. They need not fear being swamped by play-Whites. Undersuburb / on the other hand, has everything to fear--its own temptation above all, for its enrolment has declined grievously and the desire to maintain numbers tempts the Principal to accept "doubtful cases."

We have seen that the Principal of Undersuburb High School is resolved to exclude children of swarthy complexion from his school; we have seen the length to which he is prepared to go in giving expression to his resolution; and we have hazarded some compelling reasons for the existence of this resolution, which he maintains even in the face of his personal, not illiberal, inclinations. Nevertheless, his school has the reputation of harbouring play-Whites, and the majority of the children in his classrooms are in fact so dark of complexion as to raise serious
doubts as to their "White extraction."

This fact is commonly a subject for comment among government officials, teachers, parents, and even the children themselves. An interview with the Departmental Psychologist revealed his preoccupation with the complexion of children at the school—the low results obtained on the IQ tests which he administered were connected in his mind with "the question of colour." School inspectors commonly broach the topic, and indicate to teachers the children they believe to be non-White. Teachers themselves complain that "the whole trouble with this school is that 80 to 90 per cent are Coloured," and that "the School Board always pick on us when nobody else will accept a boy." They ask, "Are there any children Undersuburbers here who are not Coloured?" Manifestly Whites treat the subject with some gaiety: "Oh Lord! That's not Undersurb High, is it?" exclaimed one at the approach of a gang of African convicts. Among the children themselves a not uncommon term of abuse is "kaffir"; and their friends sometimes call Undersurb /"Kaffir Skool."

There is no reliable way of determining the actual proportion of pass-Whites enrolled to the school with any accuracy; one must simply accept the evidence of one's eyes. A reliable informant with long service at the school was asked to state which of the pupils he was quite sure were White and which Coloured. Of the pupils with whom he felt sufficiently familiar in order to make such an estimate, he classified 48 per cent as White, 16 per cent as Coloured, and the remainder "doubtful." No clearer proof that at least some are pass-White can exist than the fact that down the years a number of pass-White children have been flushed out by resentful Coloured relatives. On one recent occasion a father and mother, accompanied by a very dark child, entered the Principal's office and demanded to see him. His
secretary attempted to dissuade them from seeing him by announcing that an appointment would be necessary. They insisted, however, that they see him there and then. The Principal stalled for more than half the morning until he could no longer avoid visiting his office. When he arrived they said, "Don't worry, we are not going to ask you to take our child—we just wanted you to know that X [a boy then enrolled to the school] is a cousin of ours." On another occasion a Coloured father, who had deserted his wife, denounced his daughter, then attending the school. "He had to take it out on somebody," commented a teacher. "She was brilliant, and she wanted to raise herself. The last we heard of her she was in a non-European school." On yet another occasion the parents of the school's Coloured handyman denounced their nephew, who had attended primary school with their son, but who was then enrolled to Undersuburb High. These children, and many others placed in the same predicament, were expelled.15

How are we to account for the fact that so many children of such dark complexion are enrolled to the school in spite of the Principal's most vigourous efforts to exclude them? Some "doubtful" children have been admitted after a successful appeal to the School Board, and there have been occasions when the Principal has been overwhelmed with pity and admitted a child against his inclinations, sometimes because the parents had attended the school, sometimes because the child had attended a White primary school.16 None of these circumstances are, however,

15See M. Horrell, 1958, op. cit., p. 36, et seq., on the subject of informers.

16The personal policy of school Principals in these matters is extremely important. Some high school Principals accept any child who has got through primary school as White. Others are more cautious. It has occasionally happened that the appointment of a new Principal of a school has led to the expulsion of near-White children already enrolled at the school by the previous Principal.
sufficient to account for more than a small number of dark children on 
the register.

We can only assume therefore that a large number of swarthy chi-
dren have been enrolled to the school against the wishes of the Principal 
and at the behest of the School Committee, who, it will be remembered, 
are elected by parents mostly from among their own numbers. That at 
least some members of the School Committee seek to ensure that at least 
some swarthy children are admitted to the school is indicated by the 
fact that the Committee seldom reached a unanimous decision on the 
selection or rejection of a child on the grounds of colour. And it is 
said that Committee members have resigned over the issue "just because 
it is expecting too much to make them judge over their neighbours." Such 
committee members, according to one of their members, preferred to "give 
the benefit of the doubt."

The reaction of at least one former Committee member to the appli-
cation of swarthy children for admission to the school has not been 
merely passive. Here is an eye-witness account of his efforts on behalf 
of *pass-Whites*:

I was sitting in the home of Mr. [X] when two young women were 
shown in. They were sisters who had called to see him about the race 
classification of the younger sister. The older sister explained 
that her classification was "in order"—she was classified as *White*. 
The younger sister said she had been called upon by the Population 
Register officials to have herself classified, but she was afraid to 
do so because her birth certificate described her as being of "Mixed" 
birth.

Mr. [X] made an uncomplimentary remark about parents who wrote 
"Mixed" on birth certificates. Then he said to the younger sister: 
"'Mixed' could mean 'mixed' between English and Afrikaans, couldn't it?" The girls seemed relieved.

Asked what school she had attended, the younger sister replied: 
"Coloured." Mr. [X] remarked: "That does not mean you are Coloured, 
does it? Your parents might have sent you there because it was the 
nearest school."
Mr. [X] then despatched her to an Opposition M.P., who he said would take up her case for her. He was confident of success.

Of this man play-Whites say that "he gets a lot of children into the schools. He tries here, he tries there, and fixes things. There was a lot of trouble with this apartheid in the schools you know. It's very difficult to get into a school. It's all a matter of influence. If one of the parents knows somebody on the Committee or a friend knows a friend, they said, 'Take this child'--and it's all right."

Finally, as evidence of the connivance of the School Committee in admitting play-Whites to the school, there is the confession of the Principal, all the more impressive in that it was long-withheld, to the effect that the exclusion of some children on the grounds of appearance "blew them all up [the Committee, that is] because some of them were damn Coloureds. Some voted year after year: 'Accept this, accept this, accept this.' I wasn't going to refer a case to them if it wasn't obvious."

The picture so far drawn of the community's connivance (through its elected School Committee) in admitting play-Whites to the school is somewhat over-simple in that it implies a greater homogeneity of racial attitudes among Undersuburbers than in fact obtains. A member of the School Committee, commenting on the exclusion of some pass-Whites from the school, said "What were we to do when people living right next door to the school refused to send their children there because they had heard that it accepted Coloured children and reported you to the Board who sent an Inspector round to investigate?" Those who were excluded, he said, were "not acceptable to the community." And just as some members of the community are more ready than others to discriminate against certain pass-Whites so are some members of the School Committee more
ready than others to discriminate. "Most of us give the benefit of the
doubt but there are always one or two who are strict."

The picture drawn of the School Committee's actions is over-simple
also in the sense that it implies that the Committee invariably acted
wholly as an agent of the community. Sometimes it acted in what it per-
ceived to be the interests of the school organization and not primarily
as the community might have wished. It was the community's wish to ex-
clude those "not acceptable to the community," among whom were the
"obviously Coloured." On the other hand it was in the school's interest
to build up enrolment. Now how "obvious" the "colour" of a person is
depends not only on complexion but also on the ethnic identity of rela-
tives and known associates. Thus a person might appear "obviously
Coloured" to members of the community among whom he lives but not to
strangers. So, in the words of a School Committee member, "the policy
was to accept Coloureds from outside the area but not from within."

Undersuburb High School then is a "buffer-school." It has ac-
cepted play-Whites as pupils partly because Undersuburbers do not care to
apply apartheid rigourously, and partly because the school Principal and
the School Board often classified pupils as White or Coloured on the basis
of ad hoc decisions. Because of decisions reached in this manner, hun-
dreds of children of inscrutable complexion entered nominally White
High schools like Undersuburb /and so were sent well on the way to successful
passing for White. Some of these children were sent back to square one
when their schools were reclassified as Coloured. Thus a child may be
White one day and Coloured the next. All this adds point to L. G.
Green's definition of a Coloured person as "one who has failed to pass
as a White."
CHAPTER VI

SOCIAL CLASS AND THE STRUCTURE OF UNDERSUBURB HIGH SCHOOL

Some of the effects of the admission of pass-White children to Undersuburb High School were analyzed in the previous chapter. In this chapter are described some of the effects of the disparate social class backgrounds of teachers and pupils on the structure of the school.

Warner\(^1\) has demonstrated that in modern industrialised societies there are many different goals of socialization, each characteristic of a different social stratum, and that, therefore, the criteria for judging a pupil's success in adjusting to his society are relative to his social status and the goals which go with it. Friction results when all pupils of all social strata are judged according to the same criteria--according to what Cohen\(^2\) has called the "middle-class measuring rod." The children of Undersuburb are distressed for they are humbled and punished in school for having the working-class culture of which their own fathers and mothers approve.\(^3\) Like working-class children who attend English grammar schools they see their school as an alien institution.\(^4\) And most of their teachers experience frustration for they find many of the children quite unacceptable in terms of certain deeply felt middle-class moral standards centering around occupational ambition, cleanliness, politeness, sexual modesty, and the inhibition of obscenity and physical aggression.

---

Teachers are middle-class, if only by virtue of their occupational status and length of education. And as Becker points out,

School teachers experience problems in working with their students to the degree that those students fail to exhibit in reality the qualities of the image of the ideal pupil which teachers hold. In a stratified urban society there are many groups whose life-style and culture produce children who do not meet the standards of this image, and who are thus impossible for teachers like these to work with effectively.\(^5\)

Teaching is an important avenue for upward social mobility for White South Africans,\(^6\) and not all the teachers of Undersuburb are of middle-class origin\(^7\) (one's father was a fitter and turner, another's a railway clerk) but of these, with one possible exception, it may be said, in the words of J. A. M. Davis,

> Even if it be assumed that many teachers are first generation products of grammar schools and have a working class background their own experience of social mobility appears to produce a degree of social insecurity which weakens their sense of common origin with the children they teach.\(^8\)

But whatever the background, teachers represent to the people of Undersuburb the culture of an alien social class. For they teach, as is shown in the following pages, not the specific skills of Undersuburb but academic skills; not the folkways, values, and aspirations of Undersuburb but folkways, values, and aspirations of their own.

---

\(^7\)Some teachers were extremely reluctant to discuss their background, so my information on this point is sketchy. Three described their father's occupation as "independent business man," one as "post-master," one as "fitter and turner," and one as "railway clerk."

Before taking the matter further it would be as well to enter a word of caution. Early studies in America, such as those by the Lynds and by Hollingshead, established a connection between social class and variations in attitudes, achievement and other behaviour relevant to the school system. Further research has indicated that in these studies there has been an over-emphasis on social class as a single factor in accounting for the variations described. In a review of the literature Brookover and Gottlieb conclude that "variation in reference group, motivation, self perception, school 'social climates', teachers' and other adults' expectations of the school, and other factors may account for some differences in educational achievement and other school behavior which have been attributed to social class." If social class is here considered as a single factor in the relationship between the teachers and pupils of Queen's Park it is not because other factors such as the pervasive influence of Calvinism on South African teacher-training programmes may not be relevant but because they lie beyond the scope of this chapter.

High

The fathers of Undersuburb pupils are, for the most part, skilled or semi-skilled manual workers. Their sons, in response to the questionnaire, claim that they intend following in their fathers' footsteps. Almost all the boys choose occupations which fall within the skilled

12See Appendix B.
trades category—they want to be mechanics, fitters and turners, print compositors, electricians: most think their wishes will be realised: all think—and in this they are encouraged by their parents—that they will in fact become tradesmen of some sort. As for the girls, there are those who wish to be air hostesses, nurses, models, or hairdressers, but most want to become—and almost all think that in fact they will become—typists or office workers of some kind. In the entire school only two children hope to pursue a professional career and neither of them expect their wishes to be realised.

The boys reject busconducting ("overcrowded," "awkward hours"), and other non-trades ("Because when you've got a trade nobody can take it away from you"). By far the most numerous and vociferous hostile remarks are, however, reserved for middle-class occupations—clerk ("stuffy"), teacher ("don't like school"), doctor ("works his hole [sic] life threw [sic]"). The girls are even more class-conscious in their responses. The most commonly rejected occupations are factory hand, salesgirl and book-keeper. Their comments—"so ordinary," "unsuitable for any girl," "one mixes with the wrong kind of people," "mostly for Coloured girls." Next in order of unpopularity come the middle-class occupations of teacher, doctor, nurse and librarian.

Those occupations which are rejected by the children are rarely recommended to them by parents. The middle-class ones are, however, recommended by the teachers: boys who wish to be lithographers are advised to become artists, and girls who wish to be hairdressers are advised to become nurses.

The discrepancy between the goals of the children and of the teachers is emphasized by the nature of the courses offered by the school: these cater more adequately for those who wish to enter a
middle-class occupation than for those who wish to acquire the specific skills of the community.

All pupils study English (7 periods a week), Afrikaans (6 periods a week), and religious instruction (1 or 2 periods a week). Other subjects studied depend on sex and stream: only girls take singing, art, domestic science and typing, and not more than a handful take mathematics after Standard 6; only boys take woodwork and cadets.

In Standard 6 a general course is offered. Children have no option but to follow a uniform course consisting of the basic subjects English, Afrikaans, science, mathematics and social studies. In addition, the boys do woodwork and the girls domestic science. Physical training is taken separately by the boys and girls under two different teachers, nominally once a week. The girls have a practical art lesson, the boys a lecture from an itinerant teacher once a week. To make up for this, the boys have two religious instruction periods per week while the girls have but one. Out of the 40 periods per week, 13 are devoted to languages, 12 to mathematics and science, 6 to social studies, 6 to religious instruction, physical training, singing and art, and only 3 to the specifically vocational domestic science and woodwork.

In Standard 7 the children are shunted into three streams: Commercial Girls, Commercial Boys, and Technical Boys. All devote the same amount of time to languages and the sciences, social studies, and religious instruction. Domestic science, woodwork, art and singing are dropped—in some cases temporarily. The Commercial girls do book-keeping, business methods and typing; the Commercial boys book-keeping, business methods and mathematics; the Technical boys commercial arithmetic, mathematics, science, and metalwork. Of the 40 periods per week only 6 are devoted to specifically vocational subjects.
The Lynd's wry comment on schooling in *Middletown* . . . applies with equal force to schooling in Undersuburb:

Square root, algebra, French, the battles of the civil war . . . the ability to write composition or to use semicolons, sonnets, free verse, and the Victorian novel--all these and many other things that constitute the core of education simply do not operate in life as Middletown adults live it.¹³

The teaching of any vocational skills at all, it is true, represents a compromise on the part of the teachers. And it is a compromise which cannot be said to have their wholehearted support: teachers find most satisfaction in teaching the "classier" subjects; and those who rank lowest in the staff room (apart from those whose appointment is temporary) are those who teach manual or vocational subjects. But, from the point of view of the parents, it is not a sufficient compromise: "Why must my children learn subjects which will be no use to them?" they demand.

Teachers do not of course confine their teaching to what is formally laid down in the curriculum or to technical matters, to skills designed to make pupils useful and productive: they are also concerned with what has been called "regulatory" teaching--teaching designed to regulate pupils' behaviour in social intercourse.¹⁴ Thus, they extol the virtues of "patriotism, of loyalty, or obedience to one's superiors and to God." They applaud "dignity of effort and sacrifice." Their Principal announces that "We strive to create that spirit in the school that will make it easier for our scholars to choose the way of upright, decent, honest living." These are values and attitudes which the English public

---

¹³R. S. and H. M. Lynd, op. cit., p. 221.

school boy accepts almost as part of the topography and as so obviously right that it is hardly worth discussing them. But they do not strike a sympathetic chord in the minds of Undersuburbers.

Pertinent here is Floud and Halsay's observation that

The child may come to school ill-equipped for, or hostile to, learning under any educational arrangement; but for the most part his educability depends as much on the assumptions, values and aims embodied in the school organization into which he is supposed to assimilate himself as on those he brings with him from his home.15

Parents and teachers disagree about the kind of social behaviour which is permissible in children. Pupils are expelled for what appears to parents as trivial offences—for "parading in the street at night, all dolled up, smoking and swearing and using obscene language in the company of a low type of fellow." A mother recounts:

Last year Georgie phoned me up at work to say that the Vice-Principal wouldn't let him write his exams because he came without a tie—I wasn't there in the morning to see—so I phoned him up. It must have been one of his off days. He was sarcastic and I played up to him. I said if he didn't let Georgie write I'd go to the Board. So he came down in his car to fetch him and he found him in front of the wireless smoking. He phoned me up and said You know where I found him? I said he'd be at home. He said But do you know what he was doing? I said Probably smoking. He said Exactly. (I let the two elder boys smoke at home, but they know never to take their cigarettes to school. And they musn't smoke in front of visitors, even if their tongues are hanging out for a cigarette.) So he took him down to the Principal and lectured him and said he was a bad boy.

Disagreement is particularly strong between parents and teachers concerning the goals of education. The school Principal writes, "In preparing our scholars for life, we consider that the development of character and the recognition of spiritual values are of as much importance as the acquiring of factual knowledge." This is a sentiment he has hammered home in speeches made at prizegiving ceremonies down the

years: "There are those," he says, who think education is but a training for some particular function in society--to become an engine driver or a book-keeper or a shop-assistant . . . but the acquiring of factual knowledge and manual skills does not of itself make a good man or a bad man . . . but if it is coupled with a sense of spiritual responsibility and a high purpose in life, we have true education . . .

"Education is an attitude of mind," pontificates the school magazine, "and it does not consist in a quantum of knowledge. It is that attitude of mind that will send a boy or girl into life filled with the love and self-sacrifice that was taught here on earth by Jesus of Nazareth, filled with the eager curiosity and love of balance and beauty of the Greek, filled with the stability and love of country of the best of the Romans." Parents, on the other hand--invariably in my experience--see their children's schooling in the light of how it affects their potential earning capacity. Employers are demanding higher academic qualifications from employees than they used to: that is why parents want their children "to realise how important education is nowadays." "Times are bad," parents complain, "even with a Standard 8 you must tramp the streets for a job." Fathers of meagre schooling find themselves in uncongenial employment: their sons must do better: "If you haven't education, you're nothing--I want my children to be higher than I am, not lower." But daughters do not matter so much. "She'll need a Standard 8 for her job, but it's not for me to tell her to go any higher if she doesn't want to." After all, "The girl is going to get married, so why worry?" And besides, girls have to learn how to keep house: "It's not like a boy--she's got to learn to be at home."

It might be thought that parents who are anxious that their children pass for white and be upwardly mobile would not jib at the childrens' acquiring the middle-class values which teachers seek to
impress upon them. A dark-complexioned father, a bus conductor, who wanted his son "to go as far as possible" in school, who desired that his son should not remain "low like me," and who thought it the duty of teachers "to rise [sic] my son," seemed, when I first encountered him, to support such an argument. However, upon further enquiry I discovered that he wanted his son to enter a trade and that by "as far as possible" he meant "until he reaches minimum school-leaving age." The goals which parents and teachers have in mind for the children do not co-incide.

Teachers and parents disagree not only about the purposes of schooling but also about the techniques whereby these purposes are to be achieved. The sanctions employed by parents on their children strike the teachers as a mixture of the savage and the permissive, while the sanctions employed by the teachers often strike the parents as derisory. Teachers regard their pupils as moral agents. They use words like "deserve," "justice," "honour" and "misconduct." They appeal to children to behave "like gentlemen," and demand evidence of "team spirit." In other words they expect children to internalize middle-class values.

Parents have few such expectations. The punishment they administer consists largely of frequent thrashings and vociferous scoldings. Children soon learn, many of them, to regret, not the misdemeanour, but being caught at it; and a scolding is as water off a duck's back. So the High Principal of Undersuburb /is left to lament ineffectually that "Parents know naught of psychology and have had little, if any, training in rear- ing and caring for children."16

With teachers and parents at loggerheads in such crucial matters as the goals of education, and the means whereby these are to be achieved, it is inevitable that the war which pupils wage upon their teachers be tinged with deep-seated animosity, an animosity no better evidenced than in the type of leaders which the class throws up. These are the toughs and repeaters. In one junior class of 27, in which an election for the Class Captain was held, the 8 repeaters between them got 120 votes, and the 19 who were not repeaters got 48. There comes to mind Blau and Scotts' observation that

in groups organized in outright opposition to the formal organization, such as are found in prisons or concentration camps, high informal status probably accrues to those members who can most effectively resist organizational pressures; that is, to the 'low producers' from the standpoint of the formal organization.17

How does animosity between teachers and pupils affect the social structure of the school?

The social structure of an English public school18 is in some respects analogous to that of primitive tribes with a segmentary political structure (such as the Nuer of the Southern Sudan)19 in that individuals and groups unite in opposition to and in competition with structural equivalents, form against form, school class against school class, and sex against sex. Cross-cutting loyalties prevent the emergence of a cleavage along one axis, and so help to maintain the cohesion of the group. Forms and classes are cemented by their members'

19For an analysis of the Nuer in the light of conflict theory see M. Gluckman, Custom and Conflict in Africa, New York, Barnes and Noble, 1964, Chapter I.
cross-cutting allegiances to school houses, clubs and societies—and by an allegiance to the school as a whole, fostered by the flourishing of school insignia, by the ritual and ceremonial attendant upon morning assembly, and by competition with other schools on the sports field.

Teachers predetermine the membership and formal organization of the school, create the forces which weld the pupils together and manipulate mechanisms whereby they are subdivided. They do so to suit their own ends. By creating a structure of classes and forms, of clubs and societies, of prefects, class-Captains and underlings, of groups based on sex and on age, they pit child against child and obviate the emergence of a phalanxed body of children sustained by consentaneous loyalties. Only teachers stand united and undivided. And by promoting at school assemblies, through homily and prayer, sentiments of solidarity which embrace children and adults alike, they perpetuate their despotic power. Herein lies the genius of school organization.

Forms, clubs and societies, streams and school houses all, in some measure, define themselves in and are sustained by rivalry with structural equivalents: only the class normally draws much of its strength from opposition to teachers. Never does a class act with such esprit de corps or with such unity of purpose as when it brings a timorous and irresolute teacher to bay and closes in for the kill. Thus, of all the groups in the school the class is, from the point of view of the teachers, the most dangerous. Classes are normally at war with their teachers, even in the most renowned of schools—no one who has read The Loom of Youth or who has himself plotted with his classmates to discomfit a teacher

---

20 For a discussion of teacher solidarity at Undersuburb see p. 126 ff.

can doubt that— but at Undersuburb / this war is, as will be argued, fought with a boldness nourished by singularly unadulterated allegiances and with a ferocity sharpened by conflicts whose sources lie beyond the classroom.

The pre-eminence of the class as a unit of social structure at Undersuburb—and the extraordinary threat which it presents to the authority of teachers—is in part a consequence of the unconsolidated nature of, and even the absence of, other groups at Undersuburb / which might compete for the class members' allegiance: there are, as we shall see, no school houses, few sports clubs and societies; social categories based upon sex and form-membership lack cohesion; and there is little to divert a class member's loyalty from his class to the school as a whole.

In these ways Undersuburb / differs from English public schools.

Forms at Undersuburb/ are hierarchically ordered and numbered. Each is primarily an administrative unit whose personnel is selected by teachers in such a way that it is relatively homogeneous in terms of age and academic achievement. A child enters school at the age of about thirteen and is enrolled to Standard 6, and normally leaves three or four years later when he finishes Standard 8 or reaches the age of sixteen. At the end of each year, provided teachers think his academic progress warrants it, he is moved with his fellows to a superior form until he eventually leaves school altogether.

Forms are social units in terms of a shared designation, and in terms of a nebulous fellow-feeling which stems from a certain similarity of age and academic achievement, and from the fact that under some circumstances teachers treat them as social units. But forms are not social groups— they are social categories, the members of which rarely act in concert except at the instigation of teachers or in defence of
their collective status, as when a play group composed of members of a senior form turn upon a junior who wishes to join them. Even this last reaction is uncommon at Undersuburb, for there are so many academic repeaters in the school, so many children of 15 or 16 in Standard 6. Children of high status in terms of form membership are reluctant to spurn children who, though of a junior form, rank high in terms of the principle of age.

But however lacking in cohesion forms may be, they are, in English public schools, manipulated in such a way as to enhance the power of teachers, for they are encouraged to compete with each other towards common goals set by teachers. In competing with each other qua form members on the playing field or in fund raising, children in a public school acquire a loyalty wider than that of the class room, and, while they are divided in competition, the teachers stand united. Divide et impera. This strategy is rarely employed in relation to form membership by Undersuburb teachers, for its employment focusses children's attention upon form membership; and this the Undersuburb teachers seek to avoid. The reason is that the senior forms—the forms which rank highest in the esteem of children—are the forms which present the greatest threat to the authority of teachers. A considerable proportion of senior form membership is made up of repeaters, and repeaters, soured by their lack of academic success, and irked by the prolongation of their social adolescence, feel that they have little stake in the school system and so become rebels, continually sniping at teachers' authority.

It is significant that the younger children in the school are the ones whose judgement of their peers (as revealed in essays) is most closely in accord with that of their teachers, and that the older the children, the more teachers' and pupils' evaluations diverge, and the
more the attitude of children to teachers becomes tinged with cynicism and hostility. The younger children write, in school essays, that the kind of children teachers like best are well-behaved, obedient and quiet, and that teachers are particularly pleased by silence, attention, obedience and politeness. The older children, on the other hand, think that teachers like (in this order) "goodies," "squares," and those who are "intelligent," "wealthy," "well-mannered," "neat" and "quiet." Nothing makes them quite so pleased as "creeping" ("Yes Sir, No Sir, Can I do this for Sir, Can I do that for Sir?"") and, to a lesser extent, "laughing at their jokes," "giving them sweets," "keeping quiet" and "doing as you are told," and--lastly, "working." The younger children say that they look up to those "who work hard," are "quiet and well-behaved," to those who, as they report, teachers make prefects and class captains, or who are entrusted with chores such as making teachers' tea or cleaning the blackboard. They claim to like those who "set a good example," "do a lot for the school" and "give the school a good name." They dislike "bullies" and those who "smoke and swear." The older boys, in contrast, more often than not, single out for attack prefects, class captains, "teachers' pets" and "bullies"; and they wax caustic at the expense of "creepers," "hangers-on," "ratters," "nickers," "squirts" and "moffies" (sissies).

The differences in attitude between the younger and the older children may in part be a function of maturation processes. The work of Piaget suggests that it is only after reaching the age of 12 that the child becomes capable of "formal thought" and of questioning the social

---

order which he previously left unchallenged. But the newly acquired
capacity to challenge may be exercised to a greater or lesser degree, as
Margaret Mead has shown. Variations in the extent to which the capac-
ity for challenge is realised, where such variations are characteristic
of groups, must be accounted for in social rather than in psychological
High
terms. The older pupils of Undersuburb rebel because they see the
school as less and less rewarding and meaningful, less and less relevant
to work and home. They pass many social landmarks while still at
school—the first pair of long trousers, the first drink and cigarette,
and often the first job and girl friend—and their status as school
children is not in accord with their near adult status outside the
school. Sniffing the approach of emancipation from the tyranny of
school, they champ at the bit provocatively. In one recent year all
the prefects were suspended from office because they had as a group dis-
mantled a car standing near the school grounds and sold it for scrap
iron. Thus, the older pupils, instead of being the most amenable group
to teachers are the most intractable and are, from the teachers' point
of view, an undesirable group for juniors to model themselves on. The
contrast with English public schools, in which seniors may be a most
valuable means of socializing their juniors in a direction desired by
teachers, is marked, as is the contrast between the teacher-authorized

24E. Bowen, in G. Greene (ed.) The Old School, London, Jonathan Cape,
1934, pp. 53–4, describes a neat example of such socialization: "The first
day of term seven seniors shut themselves up and, by rotative bidding,
each picked up from the rest of the school a team of about eight for table
at meals. Each team moved round each week to the next seven dining-room
tables, each table presided over by one of the staff. The object of each
team was to make the most conversation possible, and to be a success. .
. . The great thing was to amuse the mistress whose table it was, and to
keep her smiling constantly. . . . Many of us have grown up to be good
hostesses."
powers of public school seniors and those of Undersuburb / No Undersuburb

High graduate could ever reminisce about his old school in the same vein as Cyril Connolly does about his:

In practice Eton was not a democracy for the system was feudal. The masters represented the church, with the headmaster as Pope; the boys, with their hierarchy of colours and distinctions, were the rest of the population, while the prefects and athletes, the captains of houses and the members of 'Pop' were the feudal overlords who punished offences at the request of the 'church' and in return were tacitly allowed to break the same rules themselves. Thus a boy had two loyalties, to his tutor and to his fagmaster or feudal overlords.25

Forms are cut vertically by divisions based on sex. Half the classes in Undersuburb / are unisexual and, in the others, boys and girls sit on different sides of the room. The sexes use different staircases, different sections of the playground, enter morning assembly from different sides of the hall, and follow different curricula. Whereas the girls study cooking, art and singing, and play tennis, the boys study woodwork, do cadets, and play rugby football. The division between the sexes is profound.

Sexual segregation among the children of Undersuburb / is all the more profound for being in accord with the values of the community and of the teachers. The community is characterized by a marked polarization of the sexes. After marriage, husbands and wives generally spend little of their leisure hours in each other's company, unless, as is becoming increasingly common, they are able to afford a car and can go out together over the weekend: more usually, men go to soccer or to the pub while women visit their relatives or stay at home and listen to commercial radio. Teachers discourage interaction between the sexes lest girls fall pregnant and the school acquires a "bad name." They sharply reprimand

girls who seek to enhance their femininity by wearing make-up or jewelry, and any unseemly behaviour is the inspiration for a sermon on "Purity" at morning assembly.

The division between the sexes, like the division between forms, is not very useful from the point of view of teachers seeking to divide and rule, for the division is virtually ineffectual in promoting competition among children. The disparity of roles between children of different sexes is so great that there are few activities in which boys and girls are ready to compete against each other. For one thing, they cannot compete with each other in the many spheres in which society allocates to them different activities: the girls cannot emulate the boys at cadets, rugby football or woodwork, and the boys cannot rival the girls at tennis or domestic science. Further, subtle but pervasive expectations discourage competition between the sexes for the favour of teachers and for academic kudos. Girls are expected to be "well-behaved," relatively studious, and to take their work fairly seriously, while it is little disgrace for a boy to be near the bottom of his class; the well-behaved and obtrusively studious boy is rejected by his peers as a "sissy." Girls primly censure "sloppy ducktail types" who "drink, use foul language and keep bad company," while boys reserve their most caustic comments for "creepers," "squirts" and "moffies."

Forms are subdivided into classes. These are carved out by adults on the basis of sex and academic performance and are functionally related to teaching requirements. It is convenient that children of roughly the same academic ability and who follow the same curriculum should be grouped together.

Classes constitute the most closely-knit social groups among the High. Members of the same class, except where a
class contains both boys and girls, follow the same curriculum and spend their working days in the same rooms being taught by the same teachers. They, more than any other group in the school, have the most opportunity for continual and lengthy interaction. In consequence, classes form the basis for the membership of most informal groups, clubs and societies; and even on the sports field members of the same class tend to choose each other as fellow team-members.

The cohesion of the class, resting upon the foundation of intense and prolonged interaction, and evidenced by the solidarity which class-members are capable of displaying with or against particular teachers, (no schoolboy crime is more heinous than informing on his fellows) is buttressed by an opposition between classes (which is more intense and more readily expressed than that which obtains between forms); by competition among individuals striving towards common goals within each class; by the existence of a formal structure of class captain, vice-captain, and followers—a structure which has the blessing of the adults and which has no equivalent at the form level. It is shored up by the coincidence in one group of equivalence of form, academic and sporting skill, and, to an extent, of age and sex.

The relative prominence of the class as a unit of social structure is one of the most remarkable ways in which Undersuburb /differs from the English public school. In such schools not only are groups other than classes sturdier (forms, for example, may interact at table and in chapel) but they exhibit a greater diversity: there are groups such as those based on membership of dormitories, which do not exist at Undersuburb High and there is a profusion of clubs and societies.

Nowhere is the drama of school life enacted with greater fervour than in the boarding House of the English public school. Nowhere more
than in the House is competition so passionate, opposition to structural equivalents so lusty, loyalty so infectious. Nowhere more than in the House is the reward for conformity to group expectation more evident, the price of rebellion more terrible or the subjugation of the individual to the group more complete. These Houses—probably the most potent tools for socialising children and for structuring relations among them that are available to teachers—do not exist at Undersuburb /26 There did once exist, however, mere shadows of such institutions, also known as Houses, and which consisted of groups of children sharing a common title and colours and who competed against each other in various activities. Their function was primarily to promote rivalry at athletics: but Undersuburb plays soccer and cares little for athletics, so athletics faded away, and with them, the Houses.

Other groups of the kind which, while a function of the school situation are not a necessary corollary of it, are clubs, societies and sports teams. In the English public school these are numerous and are patronised by pupils and teachers alike. They contribute significantly to the cohesion of the entire school, for they cut across divisions based on age or sex, bring together teachers and pupils and children of different classes and forms. They provide opportunity for competition, constitute a focus for group loyalties, and afford the individual satisfactions (and a stake in the system) which he might not find elsewhere.

What clubs exist at Undersuburb / Putting the best face forward, recent year
the Principal reported to the Department of Education in a / that 30

boys played cricket, 30 hockey, 18 rugby football, and that 24 girls played tennis, 25 hockey, 30 netball, and 8 badminton. Even these dismal figures are suspect, for games are seasonal and often fitfully organized, team membership is often duplicated and frequently merely nominal. What of societies? There is but one, the Christian Union, which with a mere handful of adherents, meets once a week for half-an-hour before school. There are no youth movements, no debating society, and the Dramatic Society's last production took place some years ago.

The reasons for the dearth of teacher-sponsored extra-curricular High activities at Undersuburb are complex and ramified, but two might be conveniently made explicit now. First, the extra-curricular activities which receive the willing support of teachers are not often those in Undersuburers which engage spontaneously. Secondly, just as nothing succeeds like success, so nothing fails like failure: success on the games field begets further successes, while continued failure is enervating to team spirit and to the desire to continue playing.

Undersuburb's pursuits of adults and adolescents are not those of the teachers, or those around which teachers care to construct a network of clubs and societies. Adolescents of school-going age roam around the streets if parents are out working, and sometimes even when they are not; otherwise they entertain their friends at home, or meet them at the cinema or the church guild. They, like their parents, generally belong to no voluntary associations other than churches—there is hardly a Boy Scout or Girl Guide in the school.27 And also like

27 There is a great deal of evidence to support the contention that the lower the class position the lower the rate of voluntary association membership. See, for example, M. Hausknecht, The Joiners, New York, The Bedminster Press, 1962.
their parents, there are few of them who participate enthusiastically in organised sports, though spectator sports--soccer and baseball especially--have their devotees, and there are a handful of boys in the school who play soccer or baseball for outside clubs (for these sports are not played in the school). Such leisure pursuits have little in common with those once organised at the school by the teachers. The school magazine records the birth--and death--of a play-reading circle, a science club, an Eisteddfod, regular musical concerts, tennetques, shooting, athletics, table tennis, and soccer.

Soccer died not for want of the support of children (before the Second World War the school fielded two teams which on several occasions held the Shield) but because the Principal wanted his boys to play rugby football so that they might associate on the playing fields with "the better schools." Yet the sporting association of Undersuburb "the better schools" is slender. While no account of the social or academic standing of White schools is taken in the drawing up of team fixtures, circumstances conspire to keep interaction between Undersuburb High and "the better schools" down to a minimum. For one thing, Undersuburb High is usually knocked out of the competition at an early stage, and return matches are commonly played only among "the better schools."

These schools, being wealthy, have the playing fields on which scholars may practise--while there is not a single playing field among all the schools in Undersuburb. The scholars of these schools also have the time in which to practise and to play more games, for a proportion of them are boarders: they participate not only in the "open" fixtures but also in privately arranged and exclusive tourneys among themselves.

Their boys look sturdier, healthier, and better fed than the Undersuburbers. And they are able to field many more teams than Undersuburb for
the number of their pupils is larger, the proportion of older pupils is higher, and support for rugby football much keener.

Once a school finds itself consistently at the bottom of the league, as does Undersuburb /circumstances conspire to keep it there. Games masters of the "better schools," knowing that their matches with Undersuburb /are "unimportant," cancel the matches for capricious reasons (and, some masters bitterly allege, for "snobbish" reasons). Should a match take place, the Undersuburb /team is not unlikely to be barracked by a hostile audience taunting them with the derisory epithet "Kafir Skool!" The players lose heart and fail to attend practices or even, sometimes, the matches themselves. This provides an instance of the generalization: "High-status members get more positive and low-status members get more negative support when exercising their skills."^28

We have said that at Undersuburb /the class is an unusually prominent unit of social structure, and we have claimed that one of the reasons for this is that there are no other groups in the school--no Houses, forms, clubs, societies or sex groupings--which can compete with the class for the child's loyalties. We can now add that not even the school itself diverts a child's first allegiance from his class.

In the English public school the social structure of the children is not only well-articulated but also well-integrated: there exists throughout the school a fellow-feeling which overrides all rivalries and antagonisms, is emblazoned in uniforms, crests, songs and mottoes, dramatised at morning assembly, brandished in the face of outsiders, intensified in competition with other schools, and which receives its

---

ultimate expression in the mobilisation of individual attitudes and High endeavours to group objectives. Like such a school, Undersuburb /has its uniforms and other insignia: not, it is true, hallowed by age or sanctified by tradition—and the crest is of hardboard, not of a patinated bronze or weatherbeaten marble—but, nevertheless adequate. And it has its regular morning assembly: the children troop in, the youngsters first, the prefects last, the boys on one side, the girls on the other; facing their assembled teachers they stand, chorus a perfunctory "Good Morning!," mumble their way through the Lord's Prayer (hymns are too rowdy, and are not sung), listen disconsolately while their Principal invokes the time-worn shibboleths, denounces sin, exhorts "The Right Attitude," pronounces sentence on culprits unlucky enough—or foolish enough—to be apprehended: thus is the structure of the school enacted in ritual and consecrated in the obiter dicta of the Principal. "Ceremonies are the bond that holds the multitudes together," asserts the High Book of Rites.29 Like an English public school, Undersuburb /preens itself self-consciously on speech days: on these occasions everyone is conscious of an identity held in common—the girls will not snicker or the boys leave their hair unbrushed lest the "Good Name" of the school be tarnished or mother ashamed of her child: but, alas, such days are infrequent—one a year, in fact—and they lack the social glitter, the pomp and circumstance, of the renowned school's Open Day and Old Boys' Dinner. Like such a school, too, it competes with others on the sports field, but, as we have seen, such competition is desultory, half-hearted, and is a flux too torpid and uninspiring to weld the school together.

And, finally, like such a school, it fosters team games (not, we repeat, with much success) that the individual might feel fully incorporated into the school, and it attempts to give individualistic performances a collective orientation (as in games where points were allotted to Houses as a whole). But the muezzin's cry of "Team Spirit" and "Good Name" of the school is faint. The contrast with schools which, like the English public schools, succeed in "making the individual value himself only as part of the group and as part of an historical continuum," and which are patronised by families generation after generation, is poignant. Not more than a handful of Undersuburb children know which school their mothers or fathers attended.

The public school shibboleths have been usurped by a kind of Christianity, which the Principal finds a panacea for all kinds of school's ills. Appeals for "Team Spirit" are made in religious terms: "There is one God, one Father, and He is in all of us: Let us discipline ourselves; Let us pull together, help each other fight evil; Let us learn the right values." Children are led in prayer for those who have been expelled, and for newly-appointed prefects, who stand, blushing, at the back of the hall. Staff meetings and morning assemblies open with a prayer. The success of the school, as gauged by the Principal in his reports to the Department, is estimated in terms of the number of children who have "found God."

" (X) is a cripple," writes the Principal, . . . who, through the help of the staff has come into a deeper Christian experience. Her mental ability is slightly below average. . . . Her home environment leaves much to be desired, as can be seen from her personal appearance. . . . Through her faith at recent healing services conducted by Mrs. (Y) --she went on my

30R. Wilkinson, op. cit., p. 42.
recommendation—her back and side have been strengthened marvellously
and the doctor at the hospital told her the change was remarkable.
This girl is bearing a fine Christian witness in the school and even
though she obtain a mere minimum of marks, I classify her as another
of God's successes.

But such religiosity cannot be described as an effective bond be-
tween the members of the school, for it is not shared by the majority of
the staff ("These bloomin' speeches make me feel as if everything I do
is a sin") and it is regarded by most parents and children as bizarre,
and, by some, as contemptible. Said a mother:

The Principal does it in a roundabout and soft way. A few years
ago when I was working I was late one morning and my daughter thought
I was gone. I went to the back and found her smoking. I gave her
such a hiding, you know—I was late, but I made myself later: as a
matter of fact that's how she's got two front teeth missing today.
So she went to the Principal and said her mother was nasty and she
was going to run away from home. So he preached to her and I don't
know what he said, but he said she mustn't run away unless she took
her Bible and she was first to go home and read it. So she came home
and read her Bible and she didn't run away. Well, that's one way of
doing things. He'd rather preach than cane.

So neither the school, nor any unit of social structure in the
school—except the class—functions effectively as a focus of loyalties
High
for the pupils of Undersuburb / And, as we have already noted, the class
is, from the point of view of the teachers, the most dangerous unit, for
more than any other unit of social structure in the school it draws its
strength from opposition to teachers. And this opposition, normal to
High
class-teacher relationships, is at Undersuburb /sharpened by conflicts
whose sources lie beyond the classroom. Pupils, resentful of attempts
to make them conform to middle-class modes of behaviour, bored by the
seeming irrelevance to their lives of a curriculum with a middle-class
bias, fight, like The Young Devils described by John Townsend,31 and

like the pupils of John Webb's "Black School"\textsuperscript{32} a "guerilla war to be [themselves] by being spontaneous, irrepresible and rule breaking."

This friction between teachers and pupils feeds upon itself. A teacher cannot afford to allow ever-present hostility to break out into classroom disorder by permitting the expression of spontaneity and independence: his technique of control is therefore confined to drilling, to the teaching of mechanical skills, to the maintenance of rigid standards of conduct: these maintain hostility and therefore the need for further drilling.\textsuperscript{33}

But however sharp the hostility teachers do not go in fear of physical assault as they do in the novel \textit{Blackboard Jungle}.\textsuperscript{34} The relative benignity of teacher-pupil relations may be accounted for in terms of selective recruitment, in terms of the possible existence of cross-cutting allegiances of a kind not elicited in this study and in terms of the fear of expulsion. The Principal says that there are in the school "some boys and girls who troop in and out of the juvenile courts"; but most "roffs" are screened-out in the selection process. Attempts at inducing pupils to talk freely about their informal social organization failed, leaving open the possibility that allegiances at an informal peer-group level cross-cut pupils' allegiances to their classes, induce wider loyalties, and take some of the force out of teacher-class conflict. The explanation which teachers favour, however,

\begin{itemize}
\item \textsuperscript{33} The point is made by J. Webb, \textit{ibid.}
\item \textsuperscript{34} E. Hunter, \textit{Blackboard Jungle}, New York, Simon and Schuster, 1954.
\end{itemize}
is that pass-White children feel it a privilege to be in a White school and take care not to jeopardise that privilege by tormenting their teachers beyond endurance.

The relationship between the teachers and pupils of Undersuburb High, as described in this chapter, is not a happy one; and this partly accounts for the rapid turnover of recruits to the teaching staff, the consequence of which is examined in the next chapter.
CHAPTER VII
LONG-TERM TEACHERS AND RECRUITS

In the previous chapter the relationship between the teachers and High pupils of Undersuburb /was described, as were the reciprocal effects of this relationship and the formal organization of the children. In the following chapters we turn our attention to intra-staff relationships.

The social structure of the staff-room can be seen as a system of defences against intruders, against representatives of the State or of the family, who would trespass upon areas in which teachers believe that they alone have the competence and the right to exercise authority. The teaching staff is, as Waller has it, "a fighting group."¹ To defend itself it organizes and conspires: hierarchism and solidarity are its salient characteristics.

The hierarchism of the staff of Undersuburb /is, in some ways, High eccentric. At any one time the teachers of Undersuburb /can be divided into two broad categories: those who have joined the school as a temporary expedient and who in all probability will shortly leave for other schools, and those who came to the school either out of choice or expediency and who have remained for some years. These two groups we might call the tiros and the long-term teachers, and the cleavage between them runs deeper than any other among the staff. Other eccentricities of structure are also in evidence: the Principal is unable to exert his legitimate powers to the full; the Vice-Principal and the caretaker are vested with extraordinary authority; the Principal is locked in combat with his Vice-Principal, and the Vice-Principal with

the caretaker. The solidarity of the Undersuburb /staff is also, in one respect, eccentric: tiros observe it more in the breach than in the ob-

servance.

These eccentricities can be related, on the one hand, to the scarcity of teachers and to teachers' aspiration to teach at "good" High's schools, and, on the other hand, to Undersuburb / "bad name"—a function partly of the "undesirable" scholars which the school recruits and partly of the school's inimical relations with parents and bureaucrats.

This chapter deals with the notion of solidarity and the cleavage between long-term teachers and tiros, and the succeeding chapter with hierarchism.

In industrialized societies a school finds itself caught between the conflicting particularistic demands of the family and the universalistic demands of the State. The school teachers' position would be intolerable were not the conflicting pressures exerted upon them to some extent cushioned by the intervention of School Committees, School Boards and Parent-Teacher Associations. But such bodies cannot shield teachers from all pressures exerted upon them: bureaucrats and individual parents can and do intervene directly in the affairs of the school; moreover, School Boards and Committees, being in possession of a degree of autonomy, themselves exert pressures on teachers. Teachers have to contend also with the Trojan horse of rebellious youth, whose mutinous proclivity might at any time be boosted to a dangerous degree by the abetment of parents. But teachers too are in possession of a degree of autonomy.

---

They are entrusted by the family and the State with the education of youth and they have their own ideas about how this mandate is to be interpreted and about how it is to be effected. They see themselves as exercising expertise in an area in which they alone have special competence and they resent what they perceive as unwarranted intrusions upon their business by the State or family. The structure of staff-room relationships can be seen as partly a response to this situation.

The threat of parental or State interference is one which every teaching staff must meet and all respond with solidarity, but the nature or degree of solidarity varies from school to school. The social structure of the staff of Undersuburb High is marked by certain eccentricities: a division between long-term teachers and tiros is fundamental; and there are times when the tiros crack wide open the wall of solidarity by disparaging their colleagues in the presence of outsiders. The argument pursued in this chapter is that this eccentricity is a function of the local social context.

Discussions with teachers indicate that to them a popular school is one which, to put the matter crudely, is prestigious and which has harmonious intra-staff relations. Teachers feel that the glory of such a school is reflected on to them, so they compete with each other to join its staff. Popular schools are thus in a position to pick and choose their recruits. Undersuburb High School is not a popular school, and so, while the chronic shortage of teachers obtains, it is unable to

---

3According to the Report of the Superintendent-General of Education, 1960, the actual shortage of secondary teachers in the Cape Province for 1960 was 626 out of 3,183. Similar shortages are mentioned in almost every edition of the Report published since the war.
attract a fair quota of recruits.4

Undersuburb /is perhaps the least popular White school in Cape Town for it is situated in what is, by White middle-class standards, a run-down area, it attracts pupils with whom teachers would rather not be associated, and its academic and sporting record is dismal. For a teacher to accept a post at Undersuburb /is to attract scorn from his colleagues and to invite consternation among his friends and relations, so few come to the school out of choice.5 Even fewer remain out of choice, because a teacher who remains at the school for more than a year or so jeopardizes his career: he compromises his reputation as a "good" teacher.

From informal conversations among teachers in Cape Town it can be inferred that to them being a "good" teacher means possessing the ability to maintain classroom order, having the knack of producing good public examination results, and being willing to pull one's weight in after-class activities. At Undersuburb /it is uncommonly difficult to produce good public examination results, and exceedingly tiresome to pull one's weight in after-class activities.

It is difficult for a teacher to impose classroom order at Undersuburb High because his pupils, as we have seen, generally come from homes in which learning is not valued for its own sake, so they have little incentive to exert themselves in academic endeavours, and most of them leave school as soon as the law permits. They think school a waste of

4For a discussion of some of the problems which schools in underprivileged areas face, including problems attendant upon a rapid turnover of recruits, see J. Conant, Slums and Suburbs, New York, McGraw-Hill, 1961, and H. A. Passow, Education in Depressed Areas, New York, Bureau of Publications, Teachers College, Columbia University, 1963.

5Teachers seeking employment answer advertisements in the Education Gazette. Their applications are considered by the relevant School Committee, in consultation with the Principal Teacher. If an application is approved it has to be ratified by the School Board.
time, and being thus frustrated, are in no mood to co-operate with their teachers. They continually contrive ways to interrupt the work of the class, and seek assiduously for every chink in their teachers' armour. Once they have found it, they torment them mercilessly: at any one time there is likely to be near-uproar in at least one classroom in the school. Under such circumstances a disproportionate number of teachers acquire a reputation of being unable to cope with "discipline"; henceforth they are not "good" teachers, and have little hope of promotion to a "good" school.

A teacher who is "good" at his job produces "results": that is, his pupils do well in public examinations. High teachers do not obtain such results in public examinations. The difficulty of maintaining order, the lack of incentive in pupils, and pupils' low IQ may partly account for this failure.

A "good" teacher--as defined by teachers--takes a keen interest in his school's games, clubs and cultural societies. His keenness to participate in such activities is a measure of the rewards he experiences. He can, if keen, expect commendation from his Principal and from the Inspectors, but more important than such juicy carrots are the minor but cumulative daily gratifications he is likely to experience: the insight he gains into the characters of his scholars, the gratitude of children, the pride of seeing an otherwise undistinguished scholar making his mark in the Gilbert and Sullivan production. These things are largely denied the Undersuburb teacher. Once the last bell of the day has rung his scholars' only thought is to quit the school premises and they resent being coerced into remaining for additional organized activities. The English public-school keenness for games, for best-speaker debates, and for other such middle-class delights is foreign to
them; and such enthusiasm as they have is expended on soccer and baseball rather than on the games they are encouraged to play—rugby football and cricket. With such material to work with, no teacher can hope to make a name for himself as a coach, for games successes are few. Besides, to visit the playing fields of a more popular school in the company of one's team can be a humiliating experience: colleagues might maintain a discreet silence, but their pupils are unlikely to allow the swarthy skins and down-at-heel attire of the Undersuburb /team to escape comment. Not unnaturally, most Undersuburb /teachers come to regard the supervision of games and societies as an unpleasant chore to be avoided where possible. So ambitious teachers do not by preference seek appointment at Undersuburb; still less do they desire to remain there. And since teachers are in short supply, and "good" teachers even more so, it is generally left to those of modest ambition and small potential to teach at the school.

Such is the "bad name" of the school, and such is the risk which a good teacher runs in being associated with it, that teachers have been warned unofficially by officials of the Department of Education and by lecturers of teacher-training institutions not to seek appointment there.

The Vice-Principal of the school himself advises recruits against remaining: "Bishops, Rustenburg, Rondebosch: these are the High schools that matter. Once you've been at Undersuburb /for a while you'll never move up; so if you have any ambition, take the opportunity when it comes." The Principal is left to lament:

Replies to advertisements for teachers are conspicuous by their absence. Often we consider ourselves fortunate if we receive a single reply for a vacancy. . . . New teachers coming to our school soon realise the enormity of their task and have no difficulty in obtaining posts in schools where the work is far less exacting—the material being much superior. Also, they soon learn that positions in the more privileged areas are infinitely better stepping stones to promotion.
They have no real reason for remaining with us and soon leave.  

The extreme unpopularity of the school among teachers results in a high turnover of tiros, some indication of which is provided in school records. The ratio of teachers having "temporary" appointments to those having "permanent" appointments for the years 1956-1960 vary between 2:10 and 4:9.

TABLE IX: NUMBERS OF FULL-TIME "PERMANENT" AND "TEMPORARY" TEACHERS AT UNDERSUBURB HIGH SCHOOL, 1956-1960 (OMITTED)

Of the 13 teachers of "permanent" status who resigned from their posts during the period under review five had remained at the school for no more than a year and seven others for less than five years. Such figures provide only an incomplete idea of the rate of turnover for they give no account of the turnover of what are probably the most mobile categories of teachers, itinerants, part-timers, and temporary replacements for those on sick leave. School records

---

6 H. S. Becker, in "The Career of the Chicago Public School Teacher," *American Journal of Sociology*, Vol. 57, 1952, pp. 400-77, notes that the horizontal mobility of Chicago teachers "tends to be out from the 'slums' to the 'better' neighbourhoods, primarily in terms of the (social class characteristics of the pupils."

7 Officials of the Cape School Board and of the Provincial Department of Education deny compiling statistics on teacher turnover.
concerning these categories are sketchy but they do imply an extremely high rate of mobility. For example, no less than five temporary mathematics teachers were hired in 1958.

Not all the teachers on the staff are so mobile. Six long-term teachers had between them completed 91 years of service at the school by the end of 1960. Some of them came to the school when it had not yet acquired the bad name it now has, and at a time, moreover, when the number of teachers applying for posts exceeded the number of posts available. To them it was no dishonour to be associated with Undersuburb High. They have remained for various reasons: some have stayed because they are of working-class background, feel at ease among working-class children, and unhappy at more popular schools; some because their lengthy stay has been rewarded with a seniority which they are unlikely to win elsewhere; others because they know of no better school which will or have them, either because their social background (Catholic /working-class) is unacceptable, or because their professional qualifications are minimal. All have the handicap in the race for promotion to more popular schools of having been associated with Undersuburb / High. The longer they stay at the school, the more difficult it is for them to leave it.

The categories "long-term teacher" and "tiro" provide the basis for the informal organization of the staff. Both groups of teachers find themselves in an unrewarding situation in which, like members of

---

8All the permanent teachers on the staff are certified teachers. Two have degrees at the Master level and five at the Bachelor level. Two have no higher academic qualification than a senior school-leaving certificate.
coercive institutions,\(^9\) they experience frustration and alienation, and from which they desire to escape. But their reactions to the situation differ because while tiros are able to quit the school the long-term teachers are not. A description of these differing reactions follows.

Recruits are absorbed in small numbers, and their relative inexperience renders them vulnerable to pressures exerted by long-term teachers; so they lack the cohesion of their elders, and are leaderless. Nevertheless, there is a diffuse camaraderie among tiros, fellows in misfortune. This camaraderie is partly a result of their rejection by the long-term teachers, partly of shared task-related problems, and partly of similarity of age. Also binding tiros together and setting them apart from their elders are certain sentiments and attitudes which they hold in common. Some of these attitudes, especially relatively liberal attitudes concerning classroom control, are related to tiros' relatively recent professional training. The innovations which such attitudes give rise to are rejected by the long-term teachers as implicit criticisms of the existing hierarchy, which in part is seen as reflecting relative competence in older methods of teaching.\(^10\) Other attitudes held in common by tiros are related to the fact that they have little or no stake in the school. Recruits generally intend to leave Undersuburb High as soon as they conveniently can, for their identification with a working-class and play-White school is an embarrassment to them. They regard the school with distaste, and have little incentive to develop

loyalty towards it.

Few words mean so much to teachers as does "Loyalty." "Loyalty" means supporting one's colleagues in the face of pupils, parents, the School Committee, members of other schools, bureaucrats--and even, on occasion, the Principal. It means not courting popularity with pupils at the expense of other teachers; not discussing, in the presence of pupils or parents, the personal affairs of other teachers, or casting doubt upon their ability to enforce "discipline"; not revealing enmities and schisms in the staff-room to outsiders; not obtrusively hunting promotion by currying favour with the Principal if this action shows up competitors in a poor light; not running down the school by word of mouth, or lowering its prestige by merit obloquy through scandalous conduct of one's personal affairs.

Solidarity in the face of pupils is perceived as a cardinal virtue. No teacher is more despised or feared than one who interrupts another's class to issue a trivial command, unless it be one who encourages pupils to confide in him which teachers they dislike or which they can goad with impunity. "Loyal" teachers support each other in enforcing "discipline"; they even co-ordinate marks they award for work completed by pupils, lest disparate marks lead pupils to smell division among the staff.

Solidarity in the face of parents is thought equally desirable. During public ceremonies teachers sit together, segregated from parents as much as from pupils, and they exchange scornful remarks about parents, just as they do about pupils. Parental complaints, whether made verbally or through the daily press, are derisively brushed aside. Solidarity is maintained in the face of all outsiders--School Committees, School Boards, and School Inspectors: Inspectors are informed by the Principal, tongue in cheek, that he "enjoys the full co-operation of the staff, who
show a genuine interest in their pupils' welfare and in the work of the school." Even the teachers of other schools are not proof against the staff's solidarity: such may be mocked, but one's own colleagues are beyond reproach. Teachers feel that only by concerted action and mutual support can they meet the threats to their powers and authority.

Tiros are not "loyal" to the school. The status anxiety which many experience as upwardly mobile persons is increased manyfold by identification with a working-class and play-White school; and they know that their connection with Undersuburb /will be no advantage to them when they come to apply for positions at more popular schools. They hope their stay will be short-lived. Meanwhile, they attempt to minimise their association with Undersuburb / They shun forging links with parents or children, they do not visit pupils' homes, they cold-shoulder the P.T.A. and Old Pupils' Association. At best they let it be known that they see themselves as missionaries of the middle-classes among a fallen people: they wish their scholars to talk, dress and comport themselves in a manner befitting the middle-classes; they want to "spread a little beauty" into the lives of those whose misfortune it is to come from a "terrible background." At worst they malign the community and blacken the school. Some even protest that their colleagues are not fit to associate with— that they wear bloomers, or take snuff, or are unwashed. Said one, "[the physical training teacher] has a job getting some of the boys to shower. I don't know how he stands it. There are some teachers like that." All make it their business to inform their friends and colleagues that their stay is temporary and, however fleeting, distasteful to them.

Tiros have no stake in the school. They adapt their behaviour accordingly and become apathetic. They take little interest in their
defenceless victim is therefore sought among recruits. Such a victim is almost invariably an enthusiastic teacher whose ambitious projects would increase the work of the long-term teachers beyond what they are prepared to contemplate, or whose academic attainment, understanding of educational psychology, or teaching skill, illuminates their deficiencies. The excuse for settling upon such a one as a victim is usually found in his difficulty in maintaining good order in the classroom; for new teachers, being inexperienced, often encounter such difficulties. As Parsons has noted, "Scapegoating . . . rarely appears without some 'reasonable' basis of antagonism in that there is a real conflict of ideals or interests."13 "Disciplinary" problems, endemic to the school, are blamed upon the tiro and he is driven, like the Gaderine swine, out of the school. The Principal describes one who became a scapegoat:

. . . an unqualified inexperienced young man who tried to teach mathematics and who, himself, has only secured a Senior Certificate. He had a great opinion of himself, was able to criticise everything and everybody, even the Inspector and the Principal, and remarked on the 'easiness' of the papers in mathematics. He claimed to have answered the first paper in 15 minutes! The results of our candidates with this subject were bad.

Thus the 'true' teachers of the senior classes had an additional burden and responsibility—namely, of trying to maintain the dignity of the teachers position and to hold the respect of the pupils.

The expulsion of a scapegoat is a simple process. All that is required to make a recruit feel so unwelcome as to resign voluntarily is that other teachers should fall silent as he enters the staff-room, should ignore his pleas for aid, should flagrantly change the subject while he is in mid-sentence, and should discuss his shortcomings in a

tone loud enough for him to overhear. By means of the witch-hunt the group is cleansed of a deviate, solidarity is enhanced, frustrated feelings are given vent, and the tiros are cowed into submission. No tiro dare step out of line for fear of being smelt out; and no colleague dare protect him for fear of contamination by association. This is the way the tiros are kept divided, and one of the ways in which the long-term teachers maintain their rule.

Mrs. [X] provides an example of a scapegoat. After having reared three children she returned to teaching in order to earn pin-money. As an experienced teacher and an older woman she appeared to consider herself the peer of the long-term teachers and it was with them rather than with tiros that she initially attempted to mix. Her reception was polite but cool, but this did not inhibit her effervescent conversation. After a week's stay at the school her demeanour, in marked contrast to that of a young tiro recruited contemporaneously with her, was no less animated. At about this time long-term teachers began trying to freeze her out of conversation but she did not appear to notice and persisted in pressing her company on them. The rebuffs to which she was increasingly subjected grew brazen. Not only did whispered exchanges come to an abrupt halt when she entered the staff-room but her friendly overtures were ignored point blank. When she twice requested the Vice-Principal for the use of a wall map for her class and her requests were studiously ignored her nerve began to break. She sought solace in the company of tiros at the other end of the room. The writer, for one, regarded her warily, for I was fearful of incurring the wrath of my seniors. Her recourse to the society of tiros did not escape the attention of her persecutors and they moved quickly to deprive her of this source of comfort. Whenever she opened conversation with a tiro long-term teachers
ostentatiously winked at each other and at the tiro and began complaining to tiros, in her absence, of the increased difficulty they were experiencing in maintaining order among the classes she taught. That she might be blamed for such disorder never, apparently, occurred to her, for she publicly lamented her inability to cope with "dreadful" working-class pupils. She solicited my advice. I suggested, as tactfully as I could, that, in accordance with staff ideology, she "stand no nonsense." When she left the room I was astonished to find myself being congratulated by the Special-Grade Assistant for "giving her a good dressing-down." In the end—not more than half way through term—the atmosphere in the staff-room became so tense that Mrs. [X] took to having her tea in solitude, in an empty classroom. The end of term saw her departure from the school and that, teachers agreed, was "the best thing she could have done."

The literature on witchcraft and scapegoating provides abundant parallels to the case of Mrs. [X]. Many writers have observed that in groups in which realistic conflict is inhibited or in which frustrations are imposed by sources difficult to define or locate there exists a

---

16See R. M. Williams, Jr., The Reduction of Intergroup Tensions, New York, Social Science Research Council, 1943, Chapter 3.
tendency to displace hostility on to some vulnerable individual of low status. Moreover there is evidence to indicate that "The larger the proportion of new members joining an established group within a given period of time (short of actually taking it over), the greater will be the resistance of the group to their assimilation.\textsuperscript{17} The case of Mrs. [X] is however, in one respect, unusual: she is but one of four tiros driven out of the school within a period of three years. The long-term teachers, being captive to the school, face perennial frustrations and so have need of a perennial number of semi-stranger scapegoats.

It is instructive to note that the conduct of recruits in process of being absorbed into the group is very different to that of teachers who are itinerant or who are temporarily replacing those on sick-leave. Such rolling stones are immune to the depredations of the long-term teachers and so are free to sit where they will, to talk when they will, and to hold forth without hindrance on any subject which takes their fancy.

The formal organization of the teachers of Undersuburb consists of a simple chain of command, in accordance with that laid down in the Education Ordinance, of Principal Teacher, Vice-Principal, Special-Grade Assistant, Assistant Teachers, and Teachers-in-Training. At the apex of the organizational hierarchy is the Principal Teacher; and his role, as baldly outlined in the Ordinance, is that he shall "supervise and direct the work of the school," and that he shall act as liaison between the teaching staff on the one hand and the community and bureaucracy on the other. He has as his lieutenant a Vice-Principal, "who shall discharge such special duties, apart from his normal duties as a member of the staff, as may be assigned to him from time to time by the principal teacher."

The roles outlined in the Ordinance are no more than the skeletons around which has accumulated a good deal of flesh. For the moment it will suffice merely to note the salient features of this flesh. A Principal Teacher who is thought by teachers to fulfill his role adequately is much more than a supervisor and director: he is a skilled and experienced pedagogue, an efficient administrator, a trenchant disciplinarian, a consummate diplomat, a perceptive judge of human nature; above all, he is a forceful leader. A Vice-Principal who wins the respect of his staff shares many of the qualities of a Principal, and is equipped to assume the office of supervisor and director whenever necessary. He carries much of the burden of routine administration and is a Principal's chief lieutenant.

The incumbents of the roles of Principal and Vice-Principal at Undersuburb do not play their roles according to the script. The
Principal is by no means a forceful leader. The Vice-Principal has a domineering character, and his loyalty to the Principal is fickle at best. The thesis which will be advanced in the following pages is that this situation is very largely a function of the school's relation to its community.

The Principal is a kindly, bird-like man, with the air of a zealous but ineffectual missionary. He is quite lacking in grandeur, and his accent alone would disqualify him in the race for the Principalship of a popular school. He came to Undersuburb over 30 years ago, a Master of Arts, and in possession of a teachers' diploma. Later he succeeded to the Principalship, and set about his new job with considerable enthusiasm. He wanted the school, he said, to be "a special school." Now his enthusiasm has dimmed, and he has applied to the School Board for a transfer. "He's been here too long," says the caretaker. "Ten years of this are too much for any man."

His situation is not a happy one. Most of his time in school hours is spent on clerical work, making out reports to the Department, or filling in forms for the School Board. His relations with these bodies is not gratifying, and the tone of the correspondence he addresses to them is most often sullen, even acrimonious. Of the Department he says "It's got no heart. It's got no soul. It's got no feeling. That's all there is to it. As long as you've made out the forms they want that is all they're interested in. They pat you on the back, but that achieves nothing." He has no friends among his staff, and relations with his Vice-Principal are fraught with friction. Parents he seldom sees, ("It's a nuisance when the mothers come"), except when he has to establish their racial status at an initial traumatic interview or when they come to the office to voice a complaint. ("I have to tell them to get out or
I will get out and I have to do it and that is not the sort of thing a High Principal should have to do."} Ask a mother of an Undersuburb/pupil if she has met him and one receives the characteristic indignant reply, "There has never been any trouble at school!" He addresses children at morning assembly but almost his only opportunity of making pleasurable personal contact with them is during informal classes which he conducts; and this he lives for. If he meets children on the personal level at other times, as likely as not it will be to administer severe reprimands or corporal punishment on behalf of his staff or School Committee. The children's academic records, their general indifference to religious and middle-class values, the "terrible" homes from which they come--these things fill him with despair. Not surprisingly, he is described by his wife as being "very often depressed about the school."

He lives comfortably on his salary a dozen miles from the school, in a somewhat pretentious suburb. There he is a well-known public figure. But he takes no part at Undersuburb.

He would like to teach nearer his home, and might have realised his ambition when a local School Committee forwarded his candidature for the Principalship of their school to the School Board. The Board turned him down in favour of a candidate who had had no experience even as a Vice-Principal. He was downcast. "You know High.' what the Board said? 'We need Mr. [X] at Undersuburb / They can't get anybody else to come here--at least, not to do what I'm doing. I have given them 30 years, and this is how they treat me: I had hoped to end my career in a different atmosphere."

He is not held in high esteem by his teaching staff. Conversations with teachers in Cape Town indicate that they expect a Principal
to be a "strong" man, an undisputed leader, a man who wins the respect of his Vice-Principal: under such a man teachers hope to be spared being drawn into the conflicts of those who aspire to fill the power vacuum such as is left by a vacillating Principal. Teachers expect a Principal to impose a firm discipline on his charges: under such a man their ever-latent fears of classroom disorder are dispelled. Teachers expect their Principal to back them up in relation to outsiders, to ward off parents who attempt to dictate how teachers shall teach or how they shall treat Mummy's Darling, and to rebuff officious representatives of the School Committee or School Board who threaten to erode their autonomy: under such a man they feel their professional status secure. Teachers expect their Principal to be a man of stature who "builds up the good name of the school," a man of influence, adept at persuading bureaucrats to open their coffers: under such a man they attract the envy of their colleagues and bask in the esteem of the community. The High Principal of Undersuburb /is not able to live up to such expectations; his relations with parents and bureaucrats all but ensures that. He is constrained to refuse admission to dark-complexioned children, thus attracting the resentment of parents and of the School Committee. ("It has halved my Christian influence.") On the other hand he is obliged to accept "difficult" pupils and play-Whites sent him by the School Board. Resistance earns the Board's censure; the inevitable capitulation earns the mistrust of his staff and of the Department of Education. He is a striking instance of the middle man, in whom, as Gluckman notes, "the

1H. S. Becker in "The Teacher in the Authority System of the Public School," Journal of Educational Psychology, Vol. 27, No. 1, Sept. 1953, pp. 128-41, sees teachers as concerned with keeping parents from usurping their authority and as viewing Principal Teachers as defenses against parental interference.

2The concept is expounded by B. M. Bass, in Leadership, Psychology
frailty of conflicting authority is strong." He embodies the "conflict between the ideals of leadership and the weakness of the leader."

Compounding his tribulations is the character of the scholars which the school attracts. The fact that these children are mostly working-class, and hence of low social status, is in itself sufficient to condemn the school to low social status and precludes his efforts to earn the school a "good name" and the kind of facilities found at more favoured schools. The working-class parents of the children lack the money and the influence necessary to acquire as much as a playing field for the school, the purchase of which would be subsidised by the Department of Education on the pound for pound principle. Thirty years after its High inception, Undersurb still lacks a single playing field. "It's just that we haven't got people around here who can say 'Come and have a drink with me and talk it over'," he complains. The children are generally indifferent or hostile to academic excellence, and their boredom and frustration, taken together with a working-class culture which permits of the relatively unrestrained expression of aggressive impulses, makes for classroom turmoil and teachers' discontent. And because the school lacks a "good name" it is generally unable to attract teachers who rank high in the estimation of their colleagues; and this fact further confirms the school in its ill-repute. Since, for the same reason, teachers are tempted to quit the school, he dare not assert his authority vigorously lest he antagonize his staff and so encourage them to succumb to

---

4M. Gluckman, ibid., p. 27.
temptation. He confesses: "I leave my staff alone as much as possible because they have so many problems of their own--coming from below--from the children--that if I were to exert pressure on them from above they would give it up as a bad job and leave." With this assessment of the situation his caretaker concurs:

He lets everybody shit on him because you can't get teachers nowadays. He's lucky if he gets one reply to an advertisement in the Gazette. When [the previous Principal] was here things were different: he didn't stand nonsense from anybody. If you didn't like it he showed you the door. But in those days teachers could go for months--or even years--without a job.

But his teachers are not grateful for his indulgence and they bemoan his "pathetic inability to put his bloody foot down." Little wonder he complains that "Other Principals think there is something wrong with me for staying here."

The reluctance of teachers to apply for jobs at his school deprives him of an important means for controlling staff--control through recruitment. Such control can be achieved in many schools

. . . by hiring staff members committed to school system goals and modes of procedure, members whose special training is likely to produce orientations to goals and standards of performance consistent with those of the school system, or members whose personal qualities seem compatible with the definition of school offices.5

He is left with what he perceives as second-rate staff on whom he places the blame for the rowdiness endemic to the school. He says (in confidence) of two that "they let their classes do what they want." Of another he says that his detention classes are "a picnic"; of another that her classes "are not as they should be"; of another that "he lets the girl classes run away with him"; of another that she "is having trouble"; of

another that "he has them under his thumb—but they don't like him."

He is unable to build up a "good name" for his school, and so merits the disdain of his teachers. Yet, disdained though he be, he is not the mere butt of his staff. His very office lends him a not inconsiderable measure of authority. And he can make life difficult for a disrespectful teacher; he can assign an unpopular class to him, refuse to administer corporal punishment on his behalf, neglect to protect him from the unwelcome sallies of irate parents. He can fail to recommend him for promotion, he can forward a damaging report to the Inspectors, and—most dreaded of all—can slate him when potential employers enquire. So, while he is not respected at all, he is feared by all; and while his staff may snipe covertly at his authority, they draw back from confronting him with open rebellion.

The relationship between long-term teachers and tiros has been adumbrated, as has the relationship between the Principal and his staff: what remains to be described is the relationship between, on the one hand, the Vice-Principal and Principal, and, on the other, the Vice-Principal and the rank and file of teachers.

The Vice-Principal has a more forceful personality than the Principal. There is something of the patriarch about him, and at the sound of his martial voice staff-room conversation peters out and a respectful silence ensues. He is a Master of Arts, the author of a school text, and a frequent contributor to the

editorial column of the local newspaper. With such notable capabilities (relative to those of his colleagues) it is curious that he has remained at Undersuburb High almost as long as the Principal Teacher, and that he has not succeeded in winning a Principalship for himself. He has applied for executive posts at other schools—and even for the Chair of Education at a university—but every attempt to gain promotion has been balked: he is a Catholic and has anti-Catholicism to contend with. "I applied for a post at the university," he recounts bitterly, "but a man without my qualifications got the job. I tried again and again, and in the end went to the man concerned and said: 'Look, my qualifications were higher than that fellow's, so let me know if I'm wasting my time and I won't bother to apply again'. He said, 'All right, you are a better man than he is. You are more highly qualified and you have more teaching experience, so it can't be because of that. You know what is left'." As for his status at Undersuburb High: "He's been sitting upstairs for years waiting for the Principalship to fall into his lap," says the caretaker; "But he won't get it. They'll let him act when the chief is away: but he's a Catholic."

He is embittered with the teaching profession: he protests that salaries are scandalously low; that teachers are hedged about with petty restrictions; that they are subject to surveillance by insolent laymen; and, most pungently, that they lack "professional status." ("Doctors and lawyers don't have to run bazaars.") "Still teaching?" he demands of old colleagues: "Surely not for the love of it!" And to tiros he gives this unsolicited advice: "Never take a fixed job like teaching—look where I am."

His duties as Vice-Principal are cursorily defined in the Ordinance as "such duties as may be delegated to him by the Principal Teacher, with the approval of the Committee." Ask members of staff what these duties
are and they will reply that he administers the school library and stockroom, trains the cricket team, makes up the weekly attendance register, and assumes the post of Acting Principal when necessary. All these tasks, except those bound up with the Acting Principalship, could as well be done by an Assistant Teacher. His is what the journal of the local teachers' association describes as a "twilight status." He is the Odd Man Out, the Minister Without Portfolio.

What, apart from his title and superior remuneration, differentiates him from other teachers? It is the expectation that he shall supervise and direct. To conform adequately to this expectation he must win the respect of his subordinates and the support of his Principal. Without the support of his Principal his status is insecure, even untenable. There are many schools in which the Vice-Principal is a nonentity, firmly under the thumb of a mere Assistant Teacher who has usurped the patronage of the Principal. But despite such hazards and susceptibilities the Vice-Principal of Undersuburb is able to maintain his position quite comfortably.

He is able to do so because, paradoxically, his role is loosely defined. As the activities he is expected to perform are not clearly specified in the Ordinance neither the Principal nor other staff members can very well object that he is growing too big for his shoes.7

He is able to do so, in the second place, because the Principal makes it plain as a pike-staff that he is his chief lieutenant. The Principal does this by relaying many messages and orders to the staff through him; by requesting teachers to consult him even after he has

satisfied himself that everything is in order; by praising him conspicuously at staff meetings and never openly criticising him; and by delegating to him tasks (such as the making up of attendance registers) in which he assumes a position of superordination over other teachers.

The Vice-Principal is not passive in the process of shoring up his status. If delegated to convey an instruction to the staff he will walk round to every classroom to inform each teacher individually, often interrupting lessons unnecessarily to do so: he will even go to the length of interrupting a written message being carried round the classrooms by a pupil, leave his own classroom, and take the message round himself. He is a stickler for the handing in of attendance registers on time and complains loudly if a teacher has been lax in this regard. Not even the Special-Grade Assistant is exempt from his strictures: "I haven't handed in my register yet and he hasn't said a word to me all day," he complained.

He implies disapproval of those teachers who, without first consulting him, approach the Principal. Should he observe a teacher guilty of such an irreverent transgression he is likely to accost him while he is consulting the Principal and to monopolise the Principal's attention. Mostly he succeeds in forestalling such transgressions by rarely missing his three o'clock tea in the Principal's office: three o'clock is a time when many teachers find it convenient to consult the Principal. Should he suspect a teacher of successfully evading his blockade he is quick to retaliate with caustic remarks. ("We don't seem to see Mr. Grob very often at tea nowadays--he seems to have rather a lot of work to do.") As a result, teachers take care to avoid crossing him. Said one, "The Vice-Principal probably thinks I'm siding with the Principal against him. I'm making a point of showing him this is not so
by doing duties he appoints me, like library duty. By rights he should be doing it."

At staff meetings he is verbose and voluble, and should a discussion on some matter make little headway he is likely to ask the Principal to postpone a decision "Until you and I have looked into the matter more thoroughly." Only he and the Principal have prior access to a staff-meeting agenda: this ensures that teachers have no opportunity of discussing anything beforehand.

He takes full advantage of his status as the Principal's right-hand man to safeguard his position among the staff. He interacts with the Principal more than does any other teacher; and more with him than with any other teacher: he sits next to the Principal at staff meetings, and is ever in and out of the Principal's office. He represents the Principal to the staff, and the staff to the Principal. His favourites he treats to tid-bits of inside information; his foes are denied them. His favourites find in him a sure advocate of their pleas; his foes' cases are presented tardily and without enthusiasm.

He also represents the school to outsiders. He is personally acquainted with more parents than any other teacher; and he is the only member of staff, other than the Principal, who is invariably present at School Committee meetings. More grandly, he negotiates on behalf of the school with outside bodies, such as other schools, in the absence of the Principal.

His esteem among teachers does not rest solely upon his status as the Principal's lieutenant: he is master of the staff-room in his own right. The reasons for this are several. In the first place he has the advantage over most of the staff in that he comes to the school with a status which rates fairly high in terms of social class. Let others
have sandwiches, wrapped in grease-proof paper, for lunch: he has salads, brought to school in a white napkin. He talks of his house, his car, his garden and his antiques; he draws attention to his advanced university education; his clothes are palpably expensive; he drops names. It seems only fitting that he should have an office to himself, that he should recline in the largest and most comfortable seat in the staff-room, and that he should be in charge of cricket, the school's "classiest" game.

In the second place his indefatigable energy and his assiduous intercourse with other teachers has won him a commanding position in the staff-room. He engages in more task-related activities than any other member of staff: he supervises the library and the stock-room, he coaches the cricket team (and occasionally the hockey and rugby-football teams) and assists the Principal when required. Teachers, almost of necessity, interact with him more than with any other member of staff, for he has control of facilities which teachers frequently utilize, and he arranges the roster of duties for teachers in charge of sports' teams and detention classes. In sum, he occupies a strategic position in the staff's communication network. Even in the most informal of situations he is not to be by-passed: in the staff-room he occupies the most commanding position, at the head of the table, whence he is able to survey the entire room and--unlike others--capture the attention of any teacher at will.

He assumes leadership in the formulation and reaffirmation of staff-room mores. His lengthy service has left him with an intimate knowledge of the customs of the staff-room, and he is prompt to chastise the transgressor. ("Come at eight o'clock? You're setting a very bad example: school begins at eight-forty!") It is not simply that his
sentiments are always in accord with those of the other teachers: his sentiments are regarded as somehow morally superior—as somehow most proper for a teacher to utter. He provides an instance of the generalisation that "The higher the rank of a person within a group, the more nearly his activities conform to the norms of the group." For example: teachers complain of the stupidity and the recalcitrance of scholars; he concurs; but he adds some such affirmation as:

True, but we must not be harsh. You may have heard me call some of these boys and girls 'my child': I do that for a reason: they need affection and I give them it. I love these children. That doesn't mean you have to be soft: they won't respect you for that. Some of them come from homes where the mother is out working all day and the father comes home drunk, and they are all left to roam the streets. They don't get affection at home; so we've got to make up for it. It's not a teachers job—I mean, where's your professional status?—but we've got to do it.

Another pretty example:

In this job you can expect neither professional status nor money: the reward is in the teaching itself. And it is a reward. Like Churchill during the War, all I can offer you is Blood, sweat and tears. The people of England accepted . . ."

Such affirmations, embodying sentiments which teachers feel they ought to share, have the effect of making the rest of the staff reflect guiltily upon their own utterances. For they have much to feel guilty about. It is the custom at Undersuburb to refer to children only in terms which could not possibly be misconstrued as affectionate. Typically, a teacher enters the staff-room exclaiming some such remark as: "That boy really is the limit; I gave him a good clout"; or, "Some of these girls look like street-walkers: they probably are." Those conversant with the nuances of staff-room usages will interpret the first remark as meaning

---

"I am a good disciplinarian," and the second as "These lower-class brats are an affront to my middle-classness."

The Vice-Principal, as we have already noted, occasionally represents the staff in negotiations with outsiders. He performs an analogous role in the staff-room: he formulates sentiments reflecting the corporate interests of the staff as against those of outsiders. He discourses critically upon the functions and failings of School Inspectors, University lecturers, teachers' associations, School Boards and Committees. The purportedly restrictive and forward role of Inspectors is one of his favourite topics. "What right have they to scale down our marks if they haven't been teaching the children?" he demands. "That causes the Principal to lose confidence in his teachers." Another favourite topic is the alleged difficulty which teachers experience in securing promotion:

That's one thing about teaching: if you want a job, you've got a job. If you do science or woodwork or any of the languages, you can get a job anywhere in the country. Only there are no prospects. It's not right. You've got a job, but where can you go from there? You can't become a Principal. You can only become an Inspector. How many science Inspectors are there in the country? And look at him: he has spent nearly all his life here and all he can do now is become an Inspector of science. It's not fair. What incentive has he got? No matter how well he has taught science or what he has done for the school he will never be transferred. I'm not saying we won't do our best anyway, but it would be nice to think that we might get some recognition for it. They won't move him from here. My friend did a stint at Bishops, then Rondebosch, and a year in the bush to get him into Coloured education; and from there he went right up to headmaster in Rhodesia. Bishops, Rondebosch, Rustenburg, --these are the schools that matter. Undersuburb High and the others don't count. Once you've been at Undersuburb High for a while you'll never move up. So, if you want to move on, take the opportunity when it comes. And they won't make a Vice-Principal headmaster of his own school if it's Grade A, B, or C. I know a chap who was Vice-Principal and who acted for a whole year as Principal while the Principal was ill. The Principal resigned in the end, but though the Vice-Principal had run the school well they still wouldn't give him the job. They gave him the post on a temporary basis and advertised it every term, and as soon as another Principal applied, that man got the job. So if you can help to pull the school up, you don't get advancement. If you drag it down you've got a chance. Funny, isn't it? The new Principal comes from a Grade E school: these are the stepping stones. A few years in Bishops or Rondebosch,
and a few more as headmaster of a Grade E, and you're on top.

The Principal's and Vice-Principal's facade of mutual support serves imperfectly to conceal deep-rooted friction between them. This friction has occasionally become public, as it did during the following incidents:

The Vice-Principal was in charge of the school library. The library was due for re-cataloguing, a formidable task. He set about it with little enthusiasm, and after some time had made scant progress. He complained about the amount of work involved, and the Principal immediately relieved him of it. The Principal took the job into his own hands, and, with the help of several children, finished the work in a few days. The Vice-Principal absented himself with a "severe cold," and the staff hailed the incident as a "showdown."

Another incident:

The Vice-Principal was involved in a running feud with the caretaker, and eventually asked the Principal to dismiss his opponent. The principal refused to do so and, addressing the Vice-Principal, declared, "If you don't like it, there's the door!" He turned to the caretaker and said (according to the caretaker himself): "Just keep at arms' length from him. As Vice-Principal he hasn't been one bit of use to me. He hasn't taken one bit of work off my shoulders." The Vice-Principal absented himself with another "severe cold." Teachers observed disingenuously that he appeared quite well when he left.

The Vice-Principal snipes at the authority of the Principal, but without ever doing it openly. However, if he does not overtly criticise the Principal, neither does he praise him. He often complains about something in the school--about "the general lack of discipline"--the lack of lockers for the staff--the poor standard of pupils coming to the school--or some other matter. Sometimes (too often to be mere chance) such criticism is followed by a series of comments like this: "It's surprising the difference a Headmaster makes to a school. The staff--the Vice-Principal--they can do nothing." Or, "They don't seem to make Headmasters the way they used to. Look at [Z]: he WAS the school. You couldn't mention the place without thinking of him." And he eulogises the school's previous Principal Teacher.
His challenge to the authority of the Principal is even more apparent in his actions than in his words. The Principal irritates most of the staff by failing, in their eyes, to administer the school efficiently. As the Special-Grade Assistant remarks. "He's a wonderful theorist; but when it comes to putting it into practice he makes a lovely mess of things. Administration . . . hrrmpf!" The Vice-Principal does not hesitate to underline any failure in this respect, thus covertly censuring his senior. His underlining of administrative shortcomings sometimes takes the form of inaction when appropriate action on his part would save the situation. At other times, it takes the form of emphatic, even ostentatious, activity. For example: at the end of the school term hours were shortened, and some periods interchanged. The result was confusion among staff and scholars, for not all knew what the precise arrangements were, and some had forgotten. The din in the corridors emanating from a bewildered mass of children drew the comments of several teachers, who blithely asked each other—in the presence of the Vice-Principal—why something was not done about it. The Vice-Principal might well have deputed someone—if only a prefect—to restore order; but he chose instead to shrug his shoulders and sigh: "You had better go and see the Headmaster; I keep out of the way on days like this; I have nothing to do with it." When, on the other hand, the Vice-Principal does decide to act, he very often does so with great panache. The school becomes a model of efficiency, and it is patent that he is straining every nerve to demonstrate how smoothly the school functions when he is in command. The Principal rarely misses an opportunity of proselytizing Christianity in the school, and this has the effect of antagonizing most of his staff for what they perceive as tiresome religiosity. "He doesn't have to go on and on and on," bemoans one teacher. "I can't even light a cigarette now without
thinking I'm committing a mortal sin. I feel as if I'm sinning all the
time." But when the Vice-Principal takes morning assembly, in his capac-
ity as Acting-Principal, there is either no mention of religion, or no
more than a brief passage read from the Bible without comment.

In his actions and in his words the Vice-Principal implies that
he could run the school more efficiently than the Principal. In effect
he disclaims responsibility for the school's troubles, places much of
the blame on the Principal's shoulders, and persuades the staff that he
himself is on their side. In this way he evades such animosity as he
might be expected to attract from the staff in view of his middle man
status vis à vis Principal and staff.

The possibility of friction between a Principal and a Vice-
Principal is inherent in the educational system. The Department of
Education does not stipulate with any precision what the duties of a
Vice-Principal are: this is left largely for his Principal to decide.
A Vice-Principal is thought of as being second-in command, and must
strive to maintain a rank superior to that of Assistant Teachers:
without the support of his Principal this is probably not possible. A
Vice-Principal is therefore dependent on the patronage of his Principal.
But, in a sense, he is also the Principal's rival. To further his am-
bitions he must catch the eye of the circuit Inspector and of the School
Committee, and this he can do only by so shining at his work that the
Principal may fear being overshadowed. There is a conflict between his
career commitment (which may require angling for promotion out of the
school) and his organizational commitment (which requires his not out-
shining the Principal).

Yet there need not be enmity between Principal and Vice-Principal.
There are schools in which the Vice-Principal is a staunch ally and firm
friend of the Principal, and there are others in which the Vice-Principal is an innocuous nonentity and in which the Principal is undisputed master. But the possibility of enmity becomes a probability when a school's relations with its community is such as to diminish the authority of a Principal considerably without affecting that of his Vice-Principal to the same degree, thus producing a situation in which formally-granted power becomes divorced from informal authority. The Principal of Undersuburb High loses esteem among his teacher-followers because he fails in enabling them to achieve their desire to acquire a "good name" for the school and because he fails in his role-specific task of shielding them from incursions upon their field of competence by persons who are not colleagues, while the authority of his Vice-Principal remains unimpaired.

To elaborate, the picture which teachers have of a Principal who is successful in promoting their objectives is one of a man who builds up a favourable image of the school so that it is well patronized by the community and is favoured by the bureaucracy. Under such a Principal bureaucrats listen sympathetically to requests for the creation of additional teaching posts at the school, and are ready to dip into the coffers to subsidize a new school hall, a swimming pool, or playing field. Under such a Principal parents take an active interest in the school, form a co-operative Parent-Teacher Association, run an industrious School Committee, and turn Prizegiving Day into a gala occasion: but they do not attempt to run the school. They help the children with homework, but they do not jib at the teachers' methods of instruction. They raise funds for the purchase of playing fields, but they do not attempt to dictate what games shall be played on them. They clap enthusiastically at Prizegiving ceremonies, hardly questioning the teachers' evaluation of their children. The picture which the teachers
High of Undersuburb have of their Principal is one of a man continually at loggerheads with parents and bureaucrats. He has earned the enmity of bureaucrats, parents, and local church leaders over play-Whites. The School Committee are apathetic, often failing to reach a quorum. Prize-giving ceremonies are ill-attended. Attempts to keep alive the Literary Society, the Knitting Circle, the Red Cross Detachment, the Parent-Teacher Association, and the Past Pupils' Union have all proved abortive. "We had to do everything for them," complains the Principal. "There were only a few who were interested enough to run things themselves. Besides, can you imagine me lecturing to these people on the Psychology of Adolescence? We showed them film cartoons and conjuring tricks." School fetes, organized to raise money for sports equipment and the like, were discontinued because teachers tired of doing all the work themselves, and because the thought of fowls cackling in the school hall proved too much for them. Besides, complain the teachers, parents did not enter into the spirit of the thing: they came early to snap up garden produce at less than market price but ignored the Hoopla and Tombola. Bureaucrats give short shrift to the Principal's demands for additional staff or for increased remuneration for his teachers. They have given him scant support in his search for playing fields. They send him difficult "doubtful cases," and regard him with suspicion and hostility when he bows to their demands and accepts them. From the point of view of the teachers, things could hardly

9Not merely a matter of boycotting the school, for, as Brian Jackson point out in An Education System in Miniature, London, Routledge and Kegan Paul, 1964, p. 88, the parents of English C stream children often do not come to Open Days because "... having had little education in their own childhood, they felt uncomfortable about presenting themselves at a school, or failed to realise the importance of this personal contact, or were quite unpractised in this kind of social relationship."
be worse.

All this strengthens the hand of the Vice-Principal. The "frailty of authority" does not fall so heavily upon him and he is not held responsible for the outrageous fortune which besets the school. He joins with the staff in grumbling about *play-whites*, about the shortage of teachers, the poor quality of recruits, the administrative muddle, the absence of playing fields. No matter how loud the Principal protests that he is powerless to improve matters, the suspicion sticks that he is in some way responsible for this sorry state of affairs. And parents as well as teachers grant the Vice-Principal an indulgence which they deny the Principal. On one occasion, after the Vice-Principal had harangued a meeting of parents on some matter, the Principal confided, "That speech had to come from him. It couldn't have come from me. It was too much of an ultimatum. A Vice-Principal can say things which I can't."

The upshot is that while the Principal is head of the formal organization all but one of the teachers on the staff indicate, by the carping criticism they direct at their Principal but not at their Vice-Principal, that among them the Vice-Principal enjoys by far the greater respect. Of this the Vice-Principal is confident, as the following incident indicates:

After teachers had all mustered in the staff-room for a staff meeting the Principal entered the room and stood by the door, looking rather helpless. The buzz of conversation did not diminish one whit. Nobody stood up. Nobody offered him a chair. It was as if he were not there. Looking sheepish he began counting the number of teachers present, ending with the comment, "We seem to be one chair short."
The Vice-Principal started up as if he had only then become aware of the Principal's presence and, not without a hint of ostentation, proffered his chair, which the Principal accepted somewhat awkwardly. He then stood behind the Principal, just as he does during morning assembly—and winked.

The Vice-Principal thus constitutes a challenge to the Principal and the relationship between them is one of considerable strain. They provide an instance of the generalisation:
When authority and responsibility within an organization do not at least roughly correspond to the (perceived) contributions of the members, there is likely to be more than the normal amount of tension within the organization. For example, if lower ranks unduly originate or suggest changes for their superiors, that makes for some strain.  

The probability that friction will develop between a Principal and Vice-Principal under the conditions adumbrated becomes a near certainty when a Principal lacks a forceful personality and has as his Vice-Principal a man of incisive character and thwarted ambition. A recent American study indicates that "more effective" school Principals tend to score significantly higher in "activity drive, social ability, emotional control, mobility drive, and so on" than do "less effective" Principals. It is no mere quirk of fate that such a situation obtains at Undersuburb. The kind of man of sufficient social skill to dominate an unruly staff would be unlikely to remain for long at Undersuburb for his services would be in such demand that he would probably have no difficulty in finding a post both more congenial to him and more likely to further his ambitions. And it is not merely fortuitous either that Undersuburb has a Vice-Principal of such redoubtable character. Were not anti-Catholicism so virulent he would doubtless have long ago won for himself the Principalship of a more popular school, but as it happens, his ambitions are balked and he has little alternative to remaining at the school. And the very fact that he has remained at the school for so long compounds his difficulties in procuring a more congenial post.

\[\text{OB, } \text{Berelson and G. Steiner, Human Behavior: An Inventory of Scientific Findings, New York, Harcourt, Brace and World, 1964, p. 377.}\]

How is friction between Principal and Vice-Principal contained? A teacher can be dismissed only after a serious offence (one of those specified in the Ordinance, such as moral turpitude or subversive activity) has been proved to the satisfaction of the School Committee, the School Board and the Department of Education: under such conditions a dismissal is difficult to effect and easy to evade; so neither the Principal nor the Vice-Principal can oust the other without enormous difficulty. The caretaker has it: "The chief would jump at the chance of getting rid of [the Vice-Principal] but [the Vice-Principal] always keeps within the letter of the law, and he can do nothing about it." So the two have to choose between living with each other in open enmity or maintaining such friendly relations as they are able. To choose the course of open enmity would be to court disaster. Neither Principal nor Vice-Principal could hope to emerge unscathed from a process of retaliation and counter-retaliation as each would undermine the authority of the other. They would suffer loss of esteem in the eyes of their staff: the Principal because he is unable to win the respect of his Vice-Principal, the Vice-Principal because he is "disloyal" to his Principal. And disaster would not strike solely at the principal belligerents. The staff would feel forced to take sides in a public quarrel between their seniors, and this would have the effect of crystallizing latent factions on the staff. Morale would drop alarmingly and teachers would leave to escape constant friction. So the friction between Undersuburb/Principal and Vice-Principal is contained, in the first instance, by the appreciation by all concerned of the disastrous consequences likely to ensue if battle is openly enjoined.

Friction is contained by two other means: by limiting spheres of potential conflict, and by concealing the extent to which conflict in
The Vice-Principal takes no part in cultivating the "spiritual welfare" of the pupils, or in the training of the rugby team--these are the Principal's preserves. In turn the Principal generally permits the Vice-Principal to manage the library and the cricket team without hindrance. In this way much friction is averted. Such friction as is not successfully averted is mostly kept from the ears of the teachers, and most would be astonished to learn how bitter is the feud between their superordinates. Thus, friction between Principal and Vice-Principal is largely prevented from spreading to the rank and file and so from assuming unmanageable proportions.

The lack of open conflict between Principal and Vice-Principal cannot be taken as an index of stability in their relationship. As Simmel observes, in close relationships, where hostile feelings are likely to be present, an absense of open conflict is an indication of underlying elements of strain. Nor can the absense of open conflict be taken as necessarily eufunctional for the school. As Gluckman notes, "... rebellions, so far from destroying the established social order, work so that they even support this order. They resolve the conflicts which the frailty of authority creates."

On the periphery of the teaching staff is the caretaker. He is disliked by the long-term teachers, and in particular by the Vice-Principal, for the esteem in which he is held by the community is

---

12 For an illuminating examination of strategies, such as "secrecy" and "lying," commonly utilized in some schools "in order to preserve the face-to-face formalities and prevent incipient interpersonal breakdowns from crystalizing," see R. G. Corwin, A Sociologgy of Education, New York, Appleton-Century-Crofts, 1965, Chapter 10.

14 M. Gluckman, op. cit., p. 28.
anomalous with his formally low status in the school. He is not, the
long-term teachers say, a REAL janitor: he

has inherited a house larger than any inhabited by an Undersuburb
High teacher. Only a serious accident and the resultant physical disa-
bility has reduced him to the role of caretaker. The tiro who is observed
hobnobbing with him is promptly reprimanded by the Vice-Principal. While
the long-term teachers dislike him, they handle him gingerly, for they
know that he can make life difficult for them. He can work to rule and
neglect to perform services which, while almost indispensable to the
smooth running of the school, he is not bound to perform in terms of his
contract--answering the telephone, making tea, replenishing supplies of
chalk, and so forth. So, while he is quite devoid of formal powers
over teachers and scholars, he is nevertheless redoubtable.

His is a strategic position in the school's communication network.
"I am," he claims justifiably, "in rather a good position: the Principal
tells me things, I see the staff; and the kids tell me things: I get it
from all three sides." Of particular significance is his intimate knowl-
dge of the children. Children gather about him in the playground, come
to him with broken pencils and cut fingers, and some, from hungry homes,
even breakfast with him at school and are fed on biscuits and the cat's
meat [sic]. He is, in fact, the only adult in the school with whom the
children communicate freely. He knows who broke up the hockey game with
studded belts, and why. He knows who made whom pregnant. He knows, in
fine, the answers to many questions which the teachers find unfathomable,
the solution to many problems teachers find intractable. With him as an
ally and confidante a teacher need not go in fear of the unknown: he
will, so to speak, know what the Natives are saying.

To sum up, the informal organization at Undersuburb /does not
coincide with the formal chain of command as laid down in the *Education Ordinance*, and this incongruence can be related to factors which stem from the teaching staff's relationship with the community they serve.

The Principal, afflicted with *working-class* and *play-White* scholars, is unable to earn the school a "good name," attracts the enmity of parents and bureaucrats, and loses the respect of his staff. The Vice-Principal is disgruntled because his merited promotion out of the school is thwarted by anti-Catholicism; and he snipes at the authority of the Principal, while shoring up his own. The caretaker is the confidante of the children, and so plays a strategic role in the school's communication network. Thus, the Principal is overshadowed by his Vice-Principal, conflict is endemic between the two; and the caretaker possesses extra-ordinary authority.
CHAPTER IX

AD HOC-ERY

Previously mentioned work\(^1\) on schools in underprivileged areas in England and the United States indicates that a rapid turnover of recruits and friction between pupils and teachers are characteristics of such schools High as they are of Undersuburb /and that these characteristics can be related to the disparate social-class backgrounds of teachers and pupils. But social-class antagonisms in South Africa are nowhere near as strong as they are in England and would be unlikely by themselves to seriously undermine the authority of the Principal and to give rise to many of the conflicts described as characteristic of the school in previous chapters. If the school is to be understood in terms of a single factor—and I do not suggest that this be attempted—then that factor should be not social-class but the presence in the school of pass-Whites. An understanding of the process of passing for White is central to an understanding of much of the content of this thesis and so, in this penultimate chapter, the topic is considered in wider perspective.

In previous chapters we focussed exclusively upon the would-be passer and on his White and non-White antagonists. Now we must take into account also those Whites of who connive at his passing. For in the study of upward social mobility or of assimilation it is misleading to focus on the aspirant to membership of the superordinate group, or on those who seek to deny him membership, to the exclusion of those who connive at his aspirations. The White and the would-be pass-White must be perceived as a team:

When we allow that the individual [here, the pass-White] projects a definition of the situation when he appears before others, we must also see that the others, however passive their role may seem to be,

\(^1\)See pages 92, 114, 115, and 120.
will themselves effectively project a definition of the situation by virtue of their response to the individual and by virtue of any lines of action they initiate to him...2

It takes two (or more) to complete the process of passing for White.

The task of the pass-White is to present himself to members of the White group in such a manner that the Whites cannot be altogether sure that he is of Coloured origin.3 Clearly, anticipatory socialization is involved.4 But there is more to passing than that. White persons have to decide whether or not to accept the aspirant as a member of their group. What are the grounds upon which the Whites base their decisions? The hypothesis is that the White South African who interacts with a person of not readily discernible race asks himself three questions: Is it incumbent upon me, in the circumstances, to decide whether or not this person is White? If I decide that he is White will others go along with my estimation? And what's in it for me? That is, he acts ad hoc in accordance with what he perceives to be in his best interests. And according to the way he answers his own questions so will the person of inscrutable race be classified as White or Coloured. To illustrate, three case studies are presented.

Case #1

A fair-skinned Coloured who lives as a Coloured and is employed as a Coloured joins, in a spirit of playfulness, the queue at a White

3Pertinent here is Drake and Cayton's observation that "In instances where Negroes are out of the conventional role, Whites who have stereotyped notions of what Negroes should do, where they might be found, and how they should act are led to mistake obvious Negroes for White or other racial stock" S. C. Drake and H. R. Cayton, Black Metropolis, New York, Harcourt, Brace and World, 1945, p. 164.

Undersuburb cinema. The cinema manager eyes him suspiciously, hesitates, walks away.

The cinema manager knows that if he admits Coloureds to his cinema he will be breaking the law and his customers will desert him. So, when he sees the fair-skinned Coloured in a queue he has to reach a decision. It is not as if the Coloured person were merely asking him the time of day: in this case, and in many similar, the manager's livelihood depends on his reaching a socially acceptable decision. He decides that (a) the Coloured might be a White; (b) other Whites would not find his estimation of the Coloured's race unconvincing; and (c) to challenge the Coloured-who-might-be-a-White would cause a disturbance and a loss of custom. So he lets the man be. His decision was made ad hoc (that is, for the particular purpose at hand and without reference to wider application) and in accordance with his best interests as he himself perceived them.

Put another way, the cinema manager acted in accordance with what Karl Popper has called "the logic of the situation."  

5 "Situational logic" (or "methodological individualism," as others have it)  is a heuristic device with which the sociologist endeavours to comprehend the behaviour of others by attributing to them the feelings and thoughts which he should have if he behaved in such manner  and by assuming that

---

behaviour is never entirely random but that persons act more or less rationally in the light of their dispositions and understandings of their situation. Here we give the device a new twist, for it is not merely we who are using "situational logic" (in interpreting the manager's behaviour): we are assuming that the manager himself makes use of the device (in anticipating the behaviour of his clients).

When the cinema manager is faced with persons in his queue who are obviously either White or Coloured his course of action is clear—it is laid down for him in the mores of his society. When, however, the race of persons in his queue is obscure he is in a quandary as to which mores apply and so he has recourse to ad hoc decisions. Once having made a number of such ad hoc decisions, and having observed the consequences, his decisions become less extempore and based more on experience and what might loosely be termed "case-law." But he cannot invariably rely upon "case-law" to resolve his difficulty for there are always some persons of whose race he cannot be sure and he must either accept such persons as White or reject them as Coloured. There is no other course of action open to him. In the next case to be discussed a "third way" was found.

Case #2

I once had a patient who looked White to me, though I didn't know. I got a frantic phone call from the hospital: Was she a European or was she a Coloured? I said I didn't know—that's your trouble, not mine. She was so dark they couldn't put her in the European ward and so fair they couldn't put her in with the Coloureds. So they put her in a side ward.

Undersuburb,
The White physician, whose surgery is in Undersuburb, did not have

---

to decide whether or not her patient was White. Whether or not the pa-
tient was in fact White did not affect her earnings or the legality of
her ministrations. The hospital authorities did not have to reach a firm
decision because the way was open for them to sidestep the issue and
avoid the negative sanctions they would have incurred had they unwittingly
made a wrong decision. Now let us suppose the patient was in the process
of passing for White, as she probably was. By virtue of the facts that
she had been treated by a White physician and had occupied, unchallenged,
a bed in a White hospital, albeit in a side ward, she had furthered her
progress on the path of upward social mobility and of assimilation into
the White group. The decisions which made this possible were made by
White persons, ad hoc, and in the light of the best interests of phy-
sician and hospital administration as they themselves perceived them.
The decisions were ad hoc insofar as they were made for the particular
purpose at hand (accommodating the patient) and without reference to
wider application (government policy, which demands total segregation of
all patients by race). The dilemma with which hospital personnel were
faced was not as acute as that of the cinema manager for "case-law"
indicated a "third way" out of the dilemma—putting the patient in a
side ward.

Case #3

As mentioned earlier, between 1932 and 1956 at least 14 White
nondenominational schools under school boards in Cape Town were
reclassified as Coloured. Six of these schools were commonly known
as "buffer schools" for they admitted as pupils children described
in the local school board minutes as "slightly Coloured" but col-
loquially known as "borderline-cases." They admitted these children
in the full knowledge that their actions were illegal, for the regu-
lations had been spelled out to them by the Superintendent-General
of Education as early as 1932.

The actions of school principals in admitting "borderline-cases"
to their schools can be understood in the light of decisions made
in terms of the best interests of principals as they themselves
perceived them rather than in terms of the demands of apartheid. All the schools mentioned are situated in areas once predominantly White residential areas, but now predominantly Coloured. As White enrolment in these schools declined school principals had little alternative but to admit an increasing proportion of "borderline-cases" to their schools if they wished to maintain enrolment.

The local school board made vigorous attempts to discourage this practice by circulating warnings and by meeting with school committees "to impress upon them the necessity of exercising great care in admitting new children to school." When these warnings were found to be ineffective the board reclassified these nominally-White "buffer-schools" as Coloured, thus sticking to the letter of the law and evading the wrath of the Superintendent-General of Education.

Paradoxically, school board officials were to some extent responsible for the very practice they were officially committed to stamp out. The primary task of the school board was to ensure that every child under a given age and purporting to be White was placed in school. "Borderline-cases" remaining in an official's Decision Pending file for any length of time (because White schools refused to accept "borderline-cases" and because the parents of these children refused to send them to Coloured schools) made him appear inefficient to his colleagues—the norms of his profession dictated that he clear his file with dispatch. He solved this problem by sending the "borderline-cases" to nominally-White "buffer-schools." "When these children that we tried to pretend didn't exist came to us," said an official of the school board, "we said, 'Why not try X School or Y School?'" In acting thus the official not only cleared his file but also escaped the emotional discomfort he would otherwise have suffered in face-to-face interaction with parents whose children he had relegated to Coloured status. The official thus acted ad hoc and in accordance with his best interests as he himself perceived
them.

Not uncommonly the school board ordered the principals of "buffer-schools" to admit to their schools children more swarthy of complexion than the principals were willing to accept. Such principals were willing to accept children whom they knew to be pass-Whites, but only so long as they were sufficiently fair of complexion as not to arouse the attention of White parents whose children were, or were potentially, enrolled to their schools. The school board, on the other hand, was not concerned with the appearance of the children so long as they were officially deemed White: the school board's concern was with the placing of all White children in White schools.

At first blush the decisions and subsequent actions of school principals and of the school board appear inconsistent, even paradoxical. Principals of "buffer-schools," anxious to maintain numbers, accept known pass-Whites but at the same time refuse on the grounds of appearance children nevertheless officially deemed White. The school board makes vigorous attempts to curb the enrolment of pass-Whites to nominally-White schools but at the same time feeds "buffer-schools" with "borderline-cases." But the inconsistency is more apparent than real and is resolved if decisions are viewed as ad hoc and as reached in terms of the best interests of the school principals and of school board officials as they themselves perceived them.

The number of similar cases which could be cited in support of this thesis is legion. All concern situations in which Whites reach ad hoc decisions. The significance of this must now be spelled out. When committees are faced with an apparently intractable problem and are deeply divided over it they as often as not resolve their difficulty by shelving it--by appointing an ad hoc sub-committee. And there, perhaps,
the matter rests. The *White* South African, faced with the difficulty of deciding upon the *racial* status of an aspirant *pass-White* solves his problem likewise, by reaching an *ad hoc* decision: but there the matter may not rest, for such *ad hoc* decisions may cumulatively favour the upward mobility of the aspirant. The point to be stressed is that while each decision is made *ad hoc*, together they constitute a *process*—that process which enables some *Coloured* persons to change their status to that of *White* persons.

The *pass-White* is not merely passive in the process, but actively seeks to manipulate social norms to his advantage. He does this by ensuring that much of his interaction with *Whites* is segmental. Were a questionably *White* person to propose broad-based interaction with a South African *White* by, for instance, requesting the hand of his daughter in marriage, then the *White* man would make exhaustive enquiries to establish the *race* of his prospective son-in-law. No room here for *ad hoc* decisions: too much is at stake. Hence the hypothesis: that aspirants to upward social mobility or to assimilation into a superordinate ethnic group gradually win acceptance by interacting segmentally with members of the superordinate group, thus allowing the superordinate-group members leeway in which innumerable *ad hoc* decisions cumulatively favourable to the aspirant can be made. To bring together and sum up the words of many informants:

The idea is first to obtain White employment in some occupation entry to which does not require the production of a [White] identity card. Government service is no good—the railways in particular—for they are strict. Tramways is excellent. Then you move to an area where some Whites live, or nearby. Then you move closer to the Whites. There's a row of houses, see. There's a vacancy and a Coloured family move in. By the time the next family moves in the first is White. Then you join White associations, especially sports clubs and churches; and you try to get your children into a White school. You cultivate White friends and encourage them to visit you. Then you get your Identity Card though first you wait until you are reasonably certain
that it will be White. If there is trouble then maybe you can buy one, if you know the right people in (X) Street.

If the pass-White is particularly acute in manipulating social norms to his advantage he will see to it that much of his interaction with White persons is not merely segmental but also selective in that it involves formally defined roles (as between teacher and pupil, physician and patient, and so on) in which the incumbent of the superordinate role performs according to universalistic norms, treating White and pass-White Undersuburb alike. The words of the minister of an church reveals an example of such manipulation: "People go to church so that they can claim they are accepted as European. People come to me for certificates, and I sign them: 'This is a registered European church and they attend my church'. I get a bit annoyed when it's obvious though."

The successful pass-White will also see to it that much of his interaction with Whites occurs at a face-to-face level, in which case Whites are unlikely to escape embarrassment should they reach a decision adverse to the passer. Some Whites are more impervious to personal pressures than others: it has been noted that some school Principals, on taking over a school, expel pass-White children; on the other hand some Principals have resigned their posts because (they have told me) the embarrassment caused them by pass-Whites proved too much for them. Similar embarrassment has, as also previously noted, caused some members of the Undersuburb/School Committee to resign. So effective are face-to-face pressures that in an attempt to circumvent them Whites may seek recourse to impersonal bureaucratic norms. As shown in Chapter V the

---

9Churches commonly patronised by pass-Whites are Lutheran, Congregational, Roman Catholic, Anglican and Methodist. The Dutch Reformed Church in Undersuburb has a small congregation, they say, because "colour is so important to them."
High Principal of Undersuburb attempted to persuade the Department of Education (the officials of which are not exposed to face-to-face interaction with passers) to deny passers access to his feeder schools, and succeeded in persuading the Western Province Land Tenure Advisory Board to zone a predominantly Coloured part of Undersuburb for exclusive White occupation in order to reduce the number of pass-Whites applying for admission to his school. And his satisfaction was evident when the Population Registration Act came into force, ("I can talk to them now—the law demands this . . .").

When the pass-White is near to success it is to his advantage to discontinue relying entirely on face-to-face pressures and to rely instead on bureaucratic norms: when he is "reasonably certain that it will be White" he obtains his Identity Card. And, as the Undersuburb High Principal has been quoted as saying, "once they've got their cards there is no arguing with them." At this time it may be to the advantage of Whites who seek to impede upward mobility of pass-Whites to block recourse to bureaucratic norms. This is what the Principal does when he refuses to tell the School Board that he will not, on the grounds of colour, admit a child to his school. To confess the relevance of colour would be to give the pass-mite child the right to appeal to the School Board and possibly to secure a bureaucratic decision in his favour.

To recapitulate, the arguments have been advanced (i) that in the study of upward social mobility we must take account not only of aspirants to upward social mobility and of those who seek to thwart them but also of those members of the superordinate group who wittingly and unwittingly aid them; (ii) that those members of the superordinate group who aid the aspirant to upward social mobility commonly do so in the course of making decisions which are (a) ad hoc, and (b) in accordance
with the best interests of the decision-makers as they themselves perceive them; (iii) that aspirants to upward social mobility interact with members of the superordinate group (a) after undergoing preliminary anticipatory socialization, (b) segmentally and selectively, in terms of formally defined roles, and (c) initially at a face-to-face level but subsequently in terms of bureaucratic norms, thus creating conditions in which innumerable decisions cumulatively favourable to the aspirant can be made by members of the superordinate group.
In this dissertation the argument was pursued that the social structure of Undersuburb High School of Undersuburb, Cape Town, can be related to the racial policy of the central government, to the mores of the people of Undersuburb and to the career ambitions of school teachers. Data collected, mainly by means of observer participation, in Undersuburb and in the school was adduced in support of the argument.

The socioeconomic and cultural affinity between Whites and Coloureds, together with White Capetonians' tendency to regard all Undersuburbians as "really" Coloured, are the conditions, it was suggested, which permit of the emergence of observed cross-cutting loyalties between the two groups based on the socioeconomic categories of "respectable" and "roff" rather than on colour. The existence of such cross-cutting loyalties is surprising not only in view of the South African government's vigorous attempts to segregate the races but also in view of the number of writers who have asserted that it is the poorest of Whites who commonly exhibit the most marked colour prejudice.¹ This study can only support Bettelheim and Janowitz' conclusion that it is not possible to postulate simple and direct relations between social-class and prejudice.²

Undersuburb, a suburb in which White and Coloured housing intermingles

and in which a we-feeling obtains between Whites and Coloureds, constitutes an environment favourable to Coloureds desirous of passing for White. Passing, it was argued, should not be viewed as an act essentially different from the wider process of upward social mobility as found among the Cape Coloured. In support of this argument there was reported the perception of Coloured informants that vertical mobility among their fellows occurs not between each of three social-classes (described by other writers as peculiar to the Coloured group and the existence of which this study does not purport to disprove) but along a line which bifurcates one branch, at its point of origin, being continuous with the line along which mobility occurs among Whites.

Passing, it was argued, is not an act but a process which involves anticipatory socialization and keeping whites in ignorance of the passer's erstwhile Coloured identity. Also involved in the process is the passer's tendency to create conditions of face-to-face segmental interaction in which Whites might make ad hoc decisions which cumulatively lend verisimilitude to the passer's claim to White status. (A man is only as White as he is thought to be.) When the balance of such decisions has swung heavily in the passer's favour—the might then further his purpose by manipulating bureaucratic rules to his advantage, e.g., by acquiring a White identity card and thereafter producing this card as evidence of his White status.

What has been said concerning aspirants to membership of a superordinate ethnic group may apply also to most aspirants to upward social mobility in contemporary industrialised societies. Here is a field in which research might fruitfully be conducted.

Coloureds who hope to pass for White find in White schools one of the selected and segmentary roles necessary for their purpose. Passing
for White, it was demonstrated, is and has been for many years endemic to many schools in Cape Town. Some school Principals faced with a declining enrolment accept (with the connivance of White School Committees) pass-White scholars able to put up a sufficiently credible appearance of possessing White status. The Cape School Board, alarmed at the number of pass-Whites in White schools, attempted to institute, in the early 1930s, special schools intended to provide for "better-class borderline pupils." The Provincial Department of Education forbade it to do so and compelled it to reclassify as Coloured a number of putatively-White "buffer schools." In subsequent decades regulations designed to enforce school segregation were given more teeth and many pass-Whites were expelled from White schools. Some so expelled enrolled to transient private schools set up especially to cater for them. In spite of new regulations pass-Whites continue to enrol to de facto "buffer schools" such as Undersuburb High School.

Faced with a steeply declining White enrolment and members of a School Committee who do not share the government's enthusiasm for racial High segregation, the Principal of Undersuburb High School enrolls to his school pass-Whites "acceptable to the community." At the same time, for fear of having the school reclassified Coloured by the Department of Education, he attempts to exclude the "obviously" Coloured—-even when these have White identity cards and the backing of the School Board. (The chief concern of the Board is to ensure the school attendance of all children in possession of White identity cards, whatever their complexion might be.)

Compounding the Principal's troubles, it was argued, is the disparate social-class backgrounds of his teachers and pupils which provide grounds for disputes over the goals of vocational and regulatory training and the means whereby these goals are to be attained. (This study lends
support to the conclusions reached by the many students of the impact of social-class on education in England and America.) Disciplinary problems ensue, the school's extra-curriculum withers away, and the school class—the members of which owe no allegiance to houses, forms, clubs or societies such as might cut across their allegiance to the class—becomes the pre-eminent unit of social structure in the school. Teachers deprived of the means par excellence of dividing and ruling their pupils (the creation and manipulation of cross-cutting allegiances) face in class a solidary body of pupils united in their opposition to middle-class adult authority. This increases the difficulty which teachers encounter in maintaining classroom order and diminishes the school's opportunity to rid itself of its "bad name." Such an analysis illustrates the utility of segmentary theory, as propounded by writers such as Coser, Eisenstadt and Gluckman, and indicates the importance of devoting attention to conflict as well as to stability in social structures. It also suggests that a group characterised by a marked cleavage (as between teachers and High) pupils at Undersuburb/ and by few or no cross-cutting allegiances may be viable provided group members perceive a sufficiently great need to retain their membership.

Association with a pass-White and working-class school imperils the occupational ambitions of teachers, so difficulty is experienced in attracting recruits to the teaching staff of Undersuburb/ and in moderating their rate of turnover: teachers who have stayed at the school for many years have not done so willingly: their desire for promotion out of the school is balked by various circumstances among the more important

3 In, for example, S. N. Eisenstadt, From Generation to Generation, London, Routledge and Kegan Paul, 1956.
of which is their lengthy association with Undersuburb. These long-term teachers are as embarrassed by their connection with the school as tiros are but they are stuck with it and have to make do. They reduce dissonance by being "loyal" to the school and to Undersuburb: they do not make the kind of disparaging remarks about the school or community that tiros make. They give vent to their frustration in continual scapegoating activity, and exemplify a category of groups (i.e., those which face amorphous, continuing, inescapable and apparently intractable frustrations) which takes its place alongside other categories such as "struggle groups" described by writers such as Coser as exhibiting a perennial need for scapegoating.

The Principal and Vice-Principal of Undersuburb contend for ascendancy over the staff. They are drawn into competition by their need to win the kudos of School Inspectors and others if they are to secure promotion out of the school, and their competition is rendered all the more keen by the strength of the Vice-Principal's desire to be quit of the school. Increasing the temptation of the Vice-Principal to compete with his Principal is the Principal's manifest weakness: this is no unequal combat. Not only does the Principal lack the social skills necessary to cope successfully with an insubordinate Vice-Principal but his status as Middle Man is particularly onerous (for he is unable to reconcile conflicting pressures and earns the enmity of community and bureaucracy alike) so that he forfeits the respect of his staff and is unable to call upon them for support in his rivalry with the Vice-Principal. Such competition, being illegitimate in terms of the differential ranking of Principal and Vice-Principal in the formal organization and a disruption of stable expectations of interpersonal conduct, assumes the proportion of conflict. The intensity of this conflict is kept
hidden from the staff lest they be tempted to leave in order to escape continual bickering: open conflict among group members is a luxury which only those groups characterised by basic harmony can afford without disintegrating.

The argument in support of which this dissertation is presented may be held good. Eccentricities of the social structure of Undersuburb High School—friction between teachers and pupils, the pre-eminence of the class as a unit of social organization, the rapid turnover of recruits, the remarkable cleavage between long-term teachers and tiros, the former's propensity to seek scapegoats, the conflict between the Principal and the Vice-Principal, and the low regard in which the Principal is held by his staff—are shown to be related to environmental pressures, that is, to the conflicting demands of government, community, and teachers.

Ross, D., Preliminary Report on the State of Education in the Cape of Good Hope, 1883 [G.12-'83].
APPENDIX A

SOCIOECONOMIC CLASSIFICATION OF THE OCCUPATIONS

OF PARENTS OF UNDERSUBRB HIGH SCHOOL PUPILS

The socioeconomic classification of occupations used here is one adapted to local conditions by E. Batson.1

A - Administrative and independent professional (e.g., accountant).
B - Subordinate professional and independent commercial (e.g., independent electrician).
C - Subordinate commercial (e.g., telephonist).
D - Skilled manual (e.g., cable-joiner).
E - Predominantly manual, but involving special responsibility (e.g., engine driver).
F - Semi-skilled manual (e.g., postal clerk).
G - Unskilled manual (e.g., porter).
H - Occupations not actively directed towards getting an income (e.g., pensioner).
J - Seeking employment.

Of the 170 responses to a questionnaire administered to pupils of Undersurburb, 158 proved sufficient for purposes of classification. Of the 135 fathers or male guardians concerned

51 (37.8%) pursued occupations which fall into group F
40 (29.6%) pursued occupations which fall into group D
17 (12.6%) pursued occupations which fall into group E
12 pursued occupations which fall into group C
6 pursued occupations which fall into group B
6 pursued occupations which fall into group H
2 pursued occupations which fall into group G
1 pursued occupations which fall into group A

Of the 23 mothers reported as being employed

17 (73.9%) pursued occupations which fall into group F
3 pursued occupations which fall into group E
2 pursued occupations which fall into group C
1 pursued occupations which fall into group B
