

# SmartFlow

*...a design solution for energy sector*

Presented by

What is  and who are we ?

SRC- Smart Remote Communications Telemetry Inc.

## Team Members and their contribution

- Shervin Asgari Pour (CMO) – Electrical Design and Development
- Yazan Shehadeh (CEO) – *Wireless Communication Development*
- Monir Pejgaleh (CFO) – *Electrical Design and Development*
- Amit Verma (COO)- Mechanical & Electrical Integrated Design
- Mark Zhou (CTO) - *Software Design & Development*

**December 16<sup>th</sup>, 2011**<sub>2</sub>

# Outline

## Background

## System Design

- Overview
- Power Component Design
- Sensor & PLC
- Old design and failures

## Business Aspects

- Budget & Financing

## Future Improvements

- Applications

## Acknowledgements

## Conclusion

## QA Session and Demo

# Background

- Requirement of wireless devices for energy sector
- Oil and Gas sector uses containers to store their fluids
- Automation control system from home via cell phone or wireless device

Need?

- Extremely helpful to employees of industries located in remote areas
- Great assistance to old and disabled people

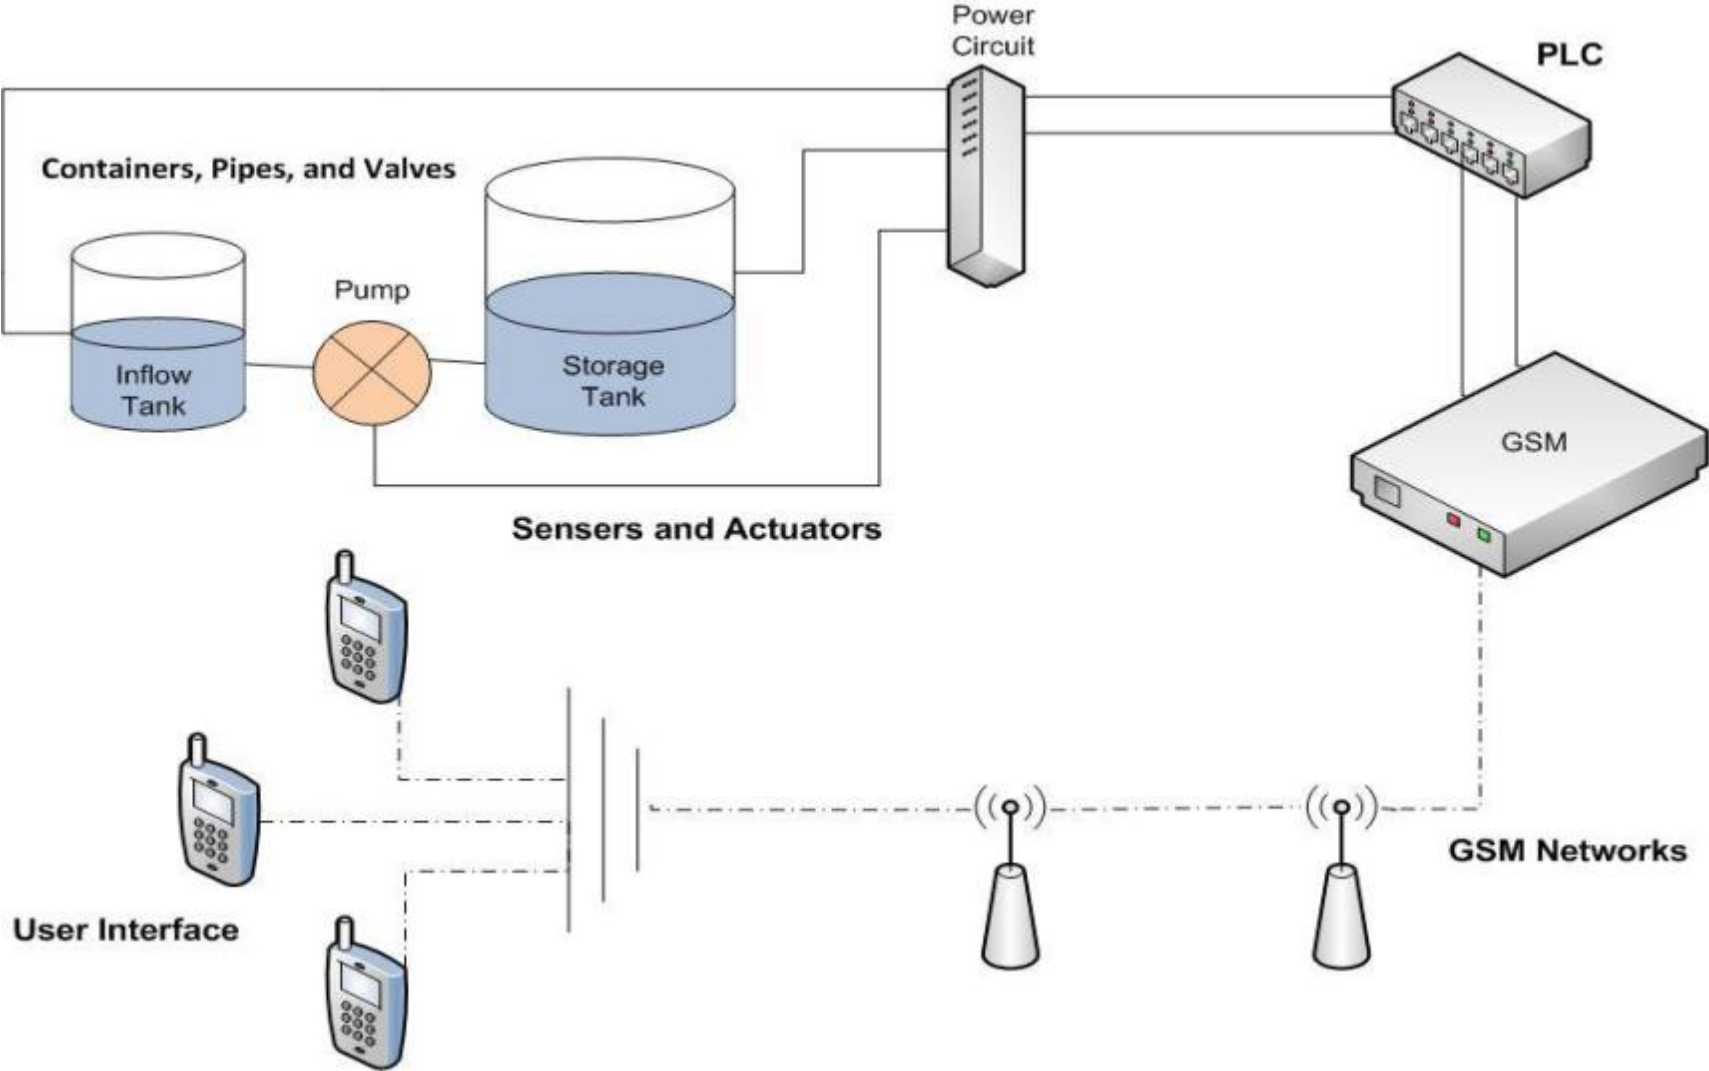

A photograph of an industrial facility, likely an oil or gas processing plant, in a snowy environment. Three workers are walking in the foreground, dressed in heavy winter work clothes. The worker on the left wears a yellow hard hat, a white balaclava, and a red and black jacket. The middle worker wears a yellow hard hat and a full red protective suit. The worker on the right wears a white hard hat and a red and black jacket. The background is filled with complex industrial structures, including pipes, tanks, and metal walkways, all partially covered in snow. A blue speech bubble is overlaid on the right side of the image.

I can't stand this bloody cold winter

A photograph of two men in traditional Arab attire (thobes and ghutras) standing in an industrial setting. The man on the left is wearing a white ghutra and a grey thobe, while the man on the right is wearing a red and white checkered ghutra and a dark thobe. Both are holding mobile phones to their ears. In the background, there is a large industrial flare emitting a thick plume of black smoke and a bright orange flame. The scene is set in a flat, open landscape under a clear sky.

**It's too hot here  
brother!!.  
We need some  
technology.**

# System Overview

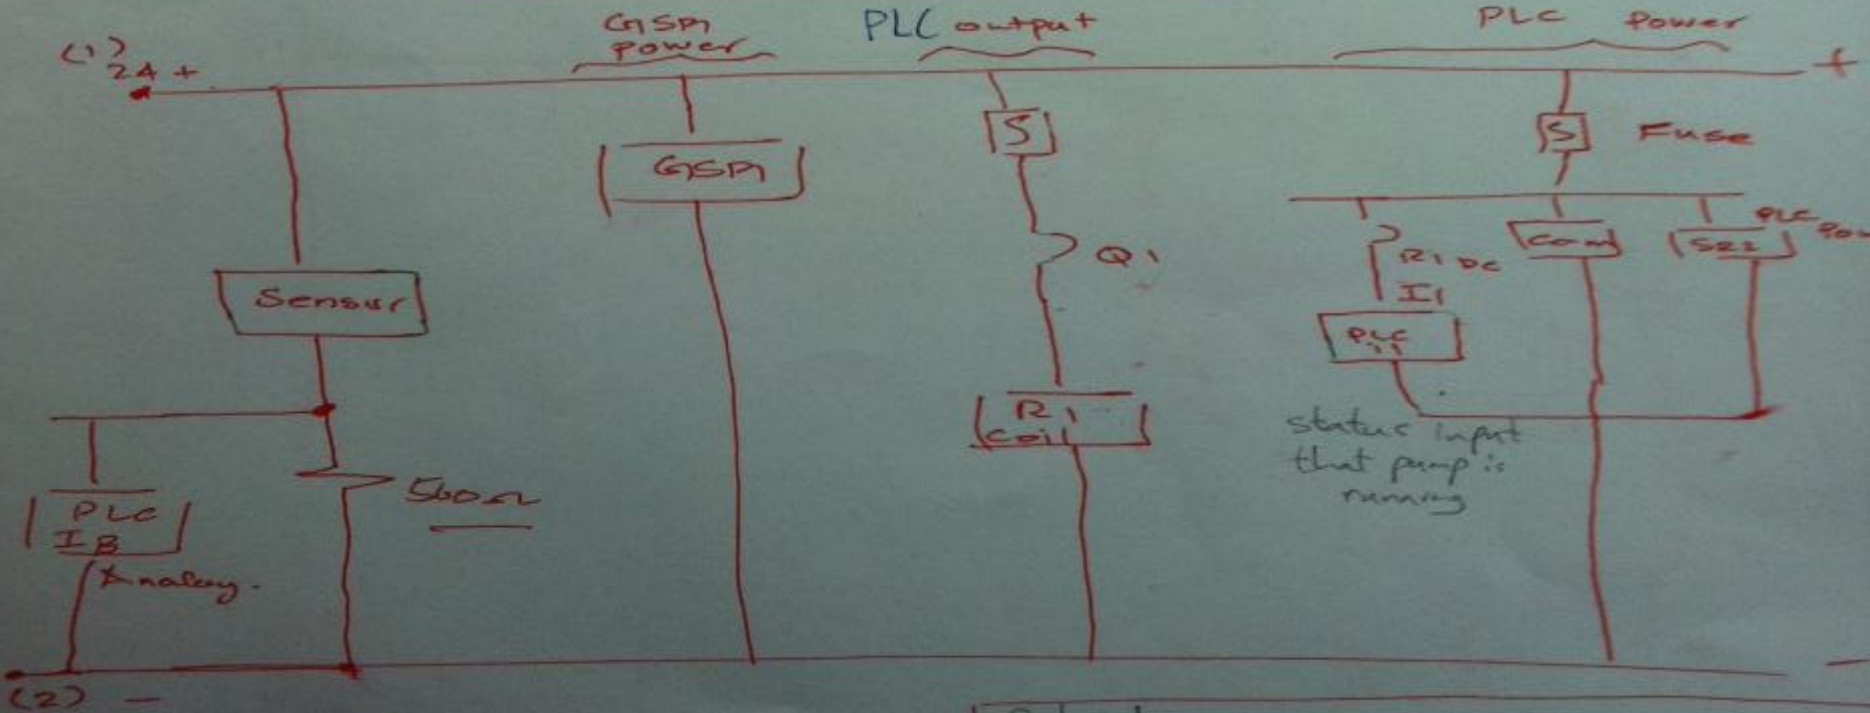

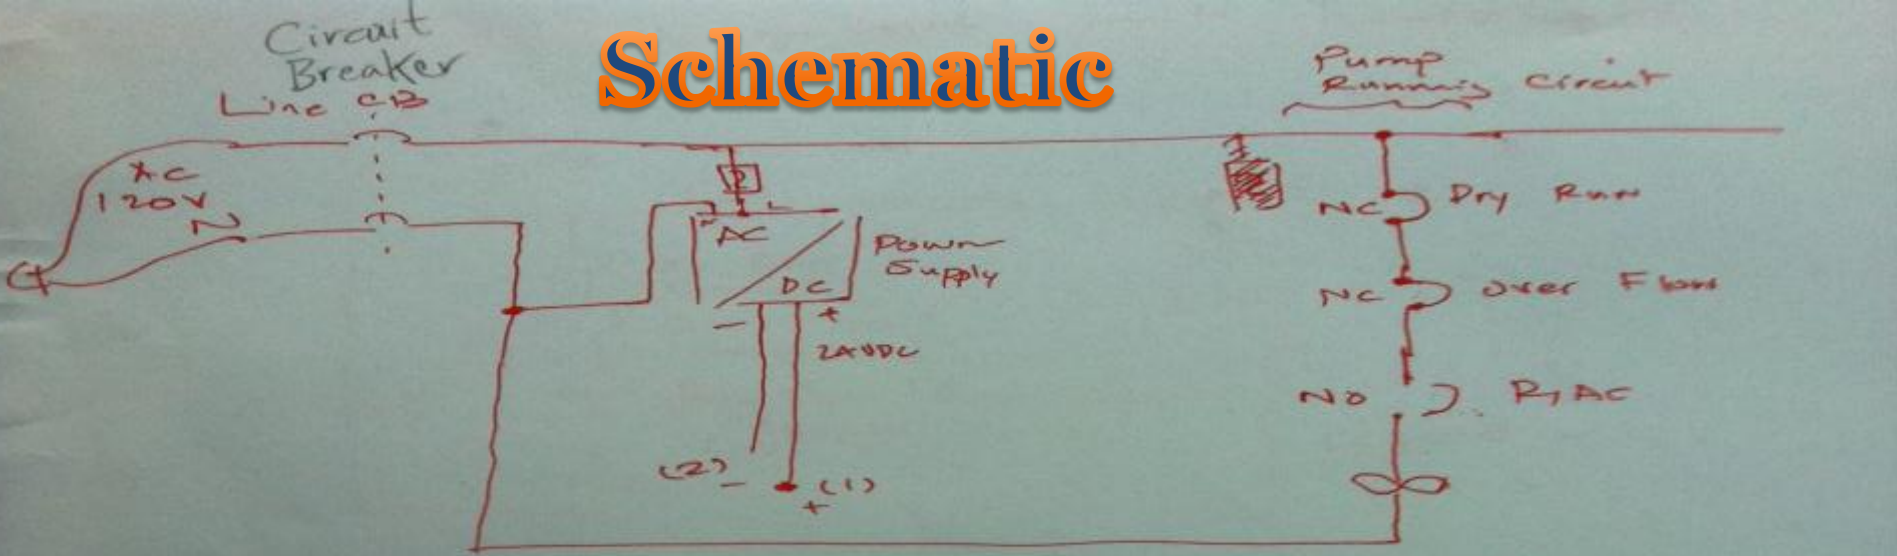

# Power Component Design – New Design

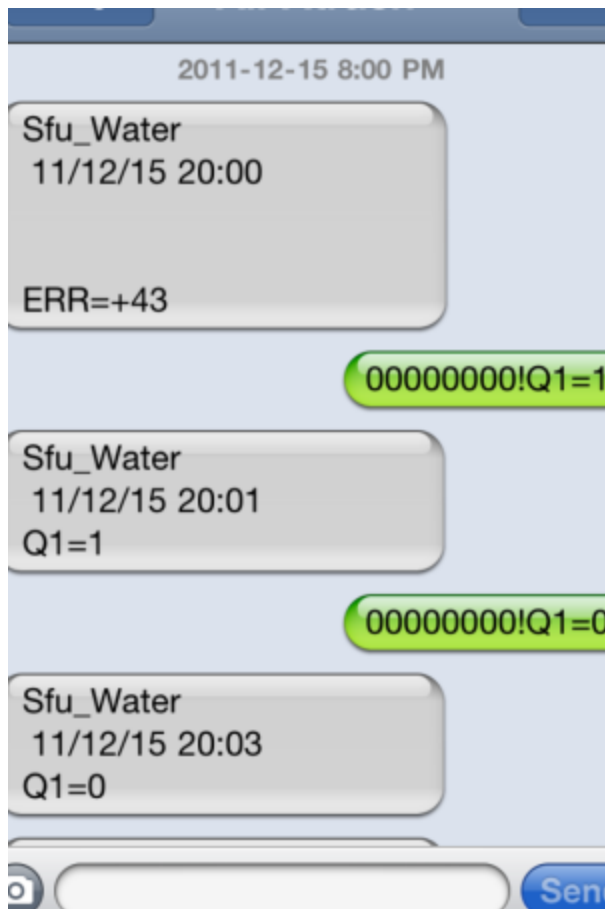

# Schematic

Q8 controls START STOP

# GSM – Communication with the tanks

**PUMP ON**

**PUMP OFF**

# Sensor : First Idea

- Level Measurement Sensor
- Discrete Output
- Why not use it?

## Sensor: Second Idea

**500 psi range, ProSense pressure transmitter, 4-20mA output**

## Sensor Cont'd: Technical Difficulties.

- Sensor output : 4 – 20 mA
- Linear voltage output from resistor
- Resistance limit
- Small voltage output range
- Different output range for each measurement

# Power Component Design

## Pumps- Used two pumps

- 110V/60Hz AC UL/CSA approved submersible water pump for large fountains, waterfalls, ponds or water features. Grounded for use indoors or outside
- watts: 70
- max flow rate: 792 gal/hour (3000 litres/hour)
- max height: 11.5 feet (3.5 metres)  
flow control: yes outlet connection: 1/2", 3/4" or 1" tubing

# Power Component Design cont'd

## Float switches

- To prevent mechanical wear down of the rotor of motor.
- To keep the level in check for the tanks.
- Prevent overflow of the liquid tanks.

## Working of float switch

- A float is equipped with powerful, permanent magnets.
- As the float rises or lowers with liquid level, it actuates a magnetic reed switch mounted within the stem.
- The permanent magnet can be reversed to change the circuit.

# Power Component Design cont'd

## Circuit breaker

- A circuit breaker is an automatically operated electrical switch designed to protect an electrical circuit from damage caused by overload or short circuit. Detects a fault condition and, by interrupting continuity, to immediately discontinue electrical flow

## Contactors

- For safe running of motor sand to prevent any short circuit in our power circuit
- A contactor is controlled by a circuit which has a much lower power level than the switched circuit

# Initial Design

- Two submersible pumps attached to the tanks
- Float switches in series with the pumps via contactor

# Issues with old design

- Compatibility
- Fail safe issue
- Redundancy
- Complexity

# Power Component Design cont'd and failures

# Development Costs

GSM modem development board	x1	\$700
Ethernet adapter board	x1	\$50 - 100 each
Pressure Sensor	x1	\$200
Float switches	x2	\$30 each
Software	x1	\$100
Relays and Contact Switches	x2	\$10 -15 each
Water Pumps	x2	\$15 -30 each
Liquid Tanks	x2	\$20 each
Pipes, Hoses and Valves	x6	\$20 Total
GSM SIM card with SMS Service	x1	\$60 -80
<b>TOTAL</b>		<b>\$1120</b>

# Financial and Social Gain

- Financial Gain
- Social Benefit

# Future Improvements and aspirations

## **ENVIRONMENT**

- Automation and remote control of ground de-pollution. Monitoring of groundwater and soil cleanup system. Monitoring of river water levels. Mobile Station for the control of water storm overflows. Remote surveillance of avalanches. Atmosphere status monitoring. A system for the remote analysis of groundwater.

## **IRRIGATION SYSTEM**

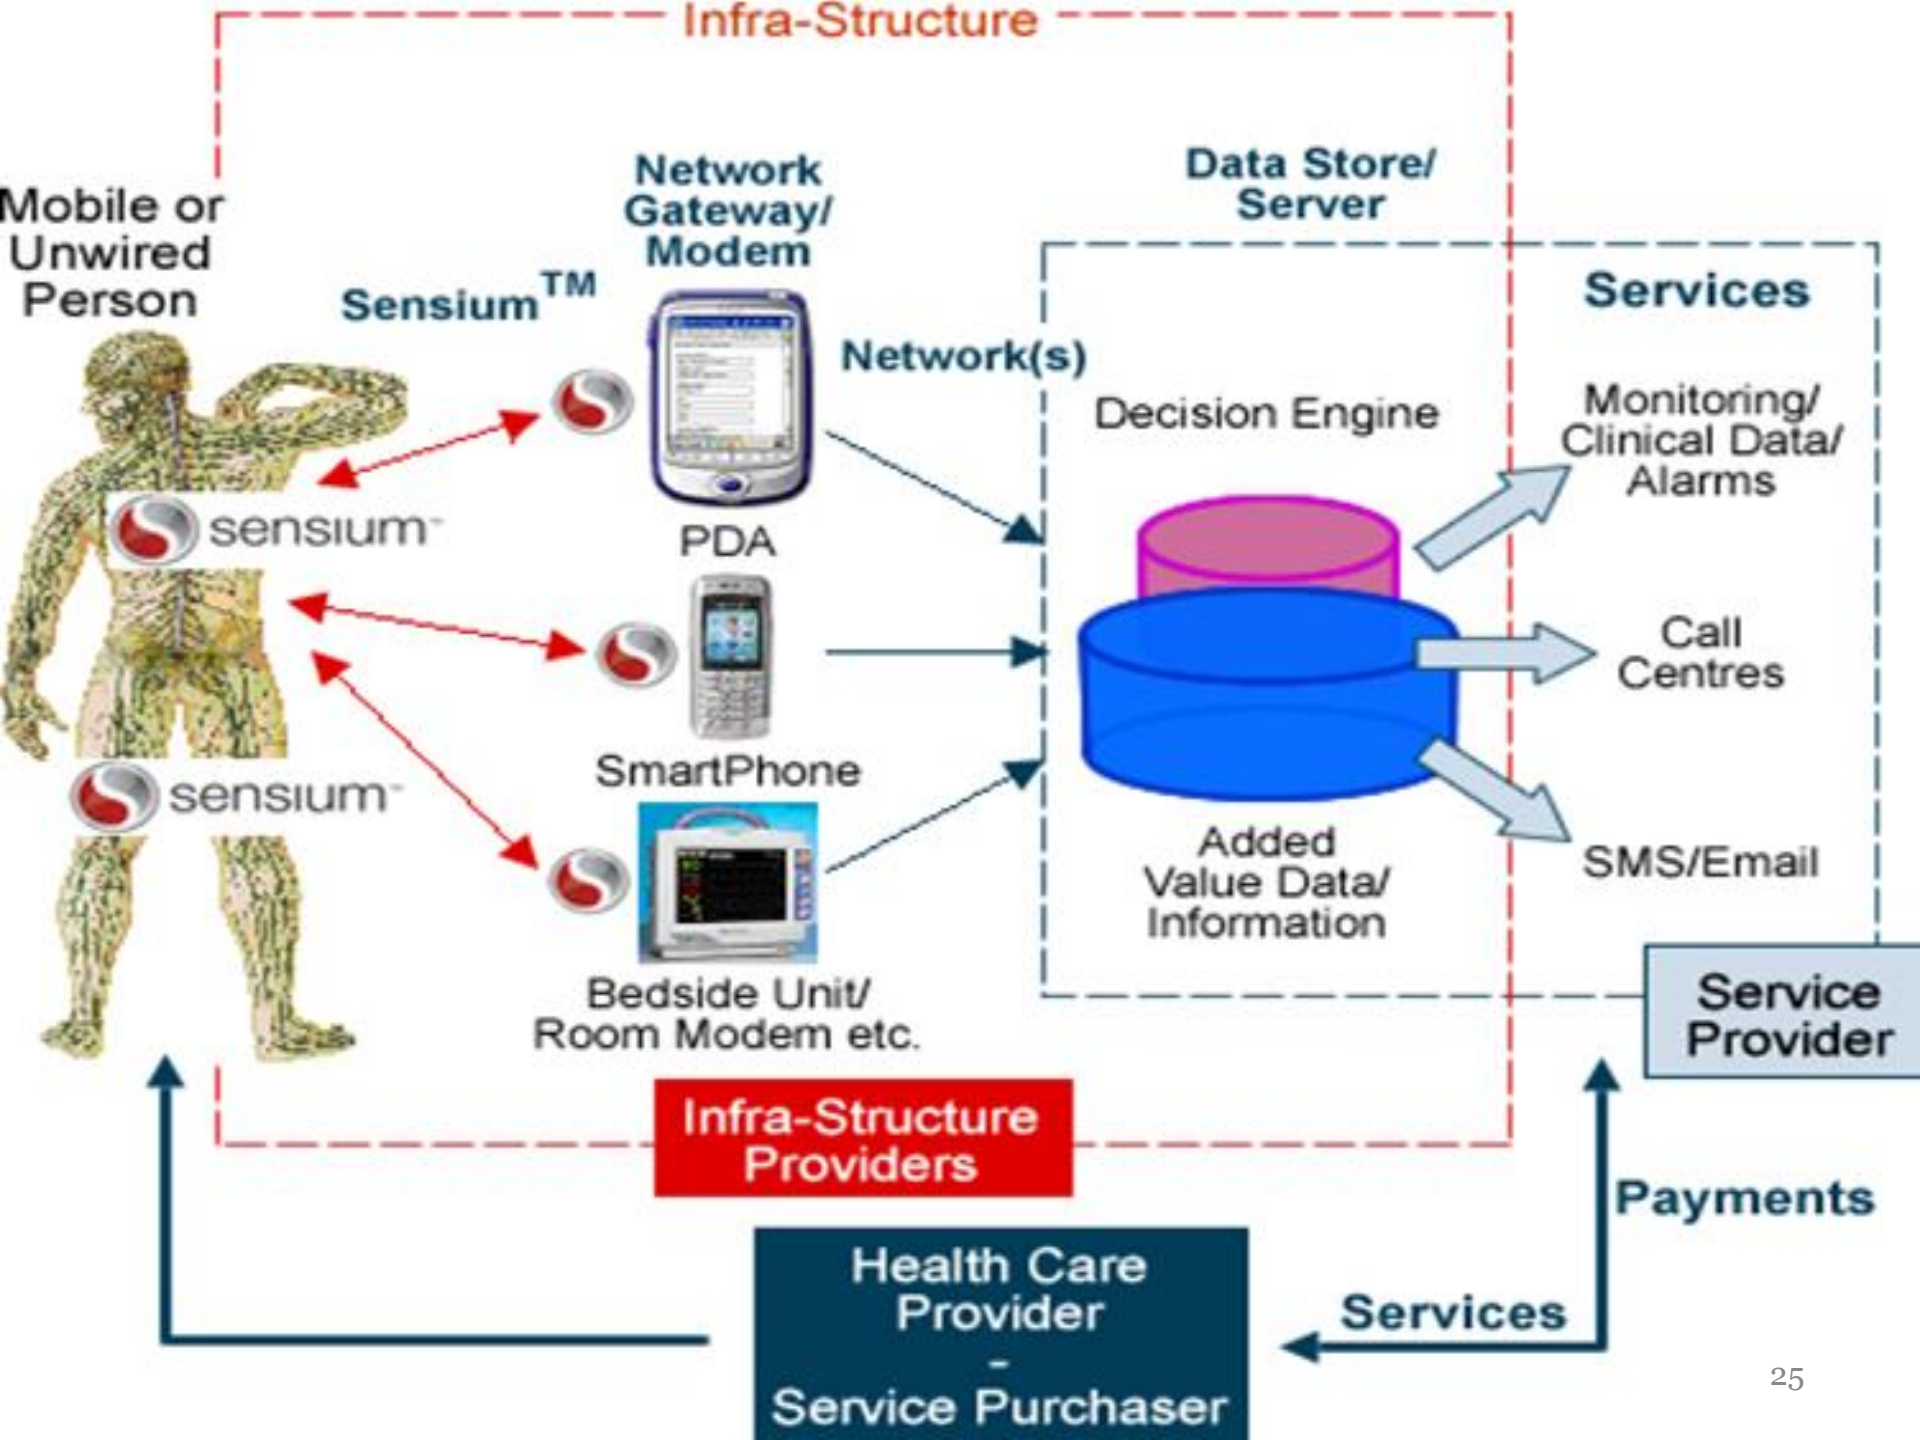

- Via SMS Irrigation Control. With the SMS text message it can also now deliver alarm information on pump conditions, reservoir levels, pipe leaks or flows. With the SMS text instruction can stopped, starting or running of irrigation process. Monitoring weather conditions and soil moisture affecting the irrigation schedules and pump controls. Remote control and telemetry water pumps. Remote control and telemetry water tanks. Remote control and monitoring of food control and irrigation soil moisture monitoring systems.

## Future Improvements and aspirations

- Improve medical science are remote monitoring of patient, biometric data of wireless network, and dispensers applications
- Monitoring levels of glucose wirelessly , pressure, checking blood flow rate, dissolve of oxygen, hovering residue, checking of acidity for various purpose and surety or presence of living organisms etc.

# Conclusion

What we learnt as a team ?

THERE IS NO "I"  
IN "TEAM."

# Team Work

**PROFESSIONALISM**

**SHARING IDEAS**

**TIME MANAGEMENT**

**TECHNICAL WRITING SKILLS**

**SRCW**  
**TELEMETRY INC.**

As individuals ?

# Take Responsibility!

# Acknowledgments

- We would like to offer our sincere thanks to Professor Marcin . M, Dr. Andrew for technical guidance.
