How to cite and reproduce the HbRf-39 archival materials

Jonathan C. Driver

Department of Archaeology, Simon Fraser University

December 2022

Excavations and analysis of HbRf-39 were funded directly and indirectly with public money. We received grants primarily from the Social Sciences and Humanities Research Council, funded by the government of Canada. Students were supported from those grants and also with scholarships and employment opportunities from Simon Fraser University, funded primarily through tuition fees and grants from the government of British Columbia. Because taxpayers and students funded the research, it is appropriate that information about HbRf-39 should be made available to anyone who is interested.

Except where noted in the metadata file, no permission is required to cite or reproduce items in the digital archive.

However, it is also important to acknowledge the people who did the work that created this knowledge, and this document provides guidelines on how to do this.

Citations

Citations are normally required when writing in an academic format. However, I encourage anyone using these resources to acknowledge the individuals whose work contributed to this archive. The following guidelines should be followed when you wish to provide a formal academic citation to the work in the digital archive.

1. Whenever possible, cite the author of any publications, theses or unpublished reports. Check the metadata file on the digital archive for guidance, as well as any restrictions on citations.

2. Some field records have clear authorship – such as the field notes made by individual crew members during the 1983 field season. These should be cited as unpublished field records, but the authorship should also be given. Example: Knut Fladmark, 1983, HbRf-39 field notes. Unpublished document HbRf39282, accessed from [URL] on [DATE]

3. The same applies to any photographic images where a creator is identified. For example, most of the colour slides taken in the 1990's were taken by J. Driver, but the collection includes the work of other photographers. Example: Jonathan Driver, 1990, HbRf-39 general view of excavations. Unpublished photograph HbRf39403110, accessed from [URL] on [DATE]

4. Databases, such as the master faunal catalogue or the lithics catalogue have authors, and those authors should be given credit. Check the metadata file for details of authorship.

5. If no author is provided in the metadata table, documents can be cited as anonymous. Example: Anonymous, n.d., drawing of HbRf-39 artifact number 79. Unpublished drawing HbRf39605, accessed from [URL] on {DATE].

Reproduction

The following guidelines should be followed when you wish to reproduce an image from the digital archive. The term "image" not only refers to photographs and drawings, but also to reproduction of part of a scanned file, such as a level record.

1. Check the metadata file to see if there are any restrictions on reproduction

2. Follow the guidelines above when providing a source for the image that you are reproducing.
