

Reports, publications and theses, HbRf-39

Jonathan C. Driver

Department of Archaeology, Simon Fraser University

December 2022

End of season reports were compiled following the 1983 and 1990 field seasons. Driver had intended to prepare an edited volume following the 1991 field season, but for various reasons it was not possible to gather enough chapters to provide a comprehensive overview of the site. Much of the material was analyzed and reported in M.A. theses, one (Handly) on the lithics and three (Pendleton, Testani and Vallières) on the fauna. A number of articles were published in refereed academic journals and in academic books (see reproductions of many of these in the edited volume compiled by Driver and Guerrero, as well as the separate list of publications).

In this folder one can find the two end-of-season reports and all of the theses except for Vallières. That thesis can be accessed through the SFU Library but is not available for download. A hard copy of the thesis is included in the physical archive.

A separate document lists all of the publications concerning the site, up to December 2022.
