Subject Index

agreement: and Conventionalism 188–9
  dangers of forced 192
  methodological 191–2
  need for 191–2
  and objectives 195–6
aggregation, problem of 90
Arrow's (im)possibilities theorem 31
Austrian School of economics:
  models 105
  and Popper 166, 169
authoritarianism:
  and the hidden agenda of science 190–1
  and the philosophy of science 161–2
  and the Problem of Induction 175

causality 107–9
choice criteria: and Conventionalism 18–22
  limitations of 22–3
  validations and confirmations 23–5, 126
choice-problem: and Conventionalism 17–18, 21–3, 147
  false problems 193–6
  and Inductivism 14
  and metaphysics 170
  and objectives 195
  and problem-dependent methodology 196
comparative statics 5, 156–8
confirmations and disconfirmations:
  and corroboration 170–1
  and model-building 121
  and positive economics 125–8
  and statistical criteria 125–7
  vs. truth and falsity 124–5
  see also choice criteria
Conventionalism: and the 'growth of knowledge' 162–3, 171
  vs. Inductivism 18–20
  liberal vs. conservative 16–20
  and popular alternatives 141–2
  and Pragmatism 142–3
  and Psychologism 42–3
  and rational expectations 67–71
  retreat to 17–18
  and the sequence of models 163–4
  short-run vs. long-run versions 20
  and theory-choice criteria 22–26, 156–8
conventions, problem of 18, 73–4
Correspondence Princple 136, 184

decision-making: and individualism 37–9
  and knowledge 176
  and methodology 181–4
dynamics: elements of dynamic models 96–7
  vs. explanations of 97
  neoclassical models of 98–102, 184–7
  and prices 101–2
  and real-time individualism 176–87

Empiricism vs. Instrumentalism 149
epistemology: and economic theory 181–5
  vs. methodology 166–7
  Popper's 171, 176–8, 186
equilibrium and expectations 67–71
  vs. imperfect competition 59–61
  and incentives 54
  and knowledge 67–71
  and Psychologism 53–4
  see also general equilibrium
expectations: and individualism 74–5
  and the problem of conventions 73–4

falsifiability: and Conventionalism 19, 22, 172–3
  is it necessary? 136–7
  and Popper's methodology 164–5, 170
  and tautology avoidance 135–6
  and testability 22–3, 136–7, 168
  and verifiability 23, 25

general equilibrium: and aggregation 86–8
  and linear models 86–8, 90–1
  vs. macroeconomics 80–6
generality: and Conventionalism 22
  vs. simplicity 146–8, 156

Hicks-Allen demand theory 8
'hidden agenda': and avant-garde research 49–54, 116

and foundations 8–9
methodology and 155–8
and neoclassical economics 20–1, 28–9, 48–9
history of economic thought: continuity-based 5–7, 161–2
Conventionalist 159–60, 163
the Inductivist tradition 158–9
methodology and 5, 158–64
two views of 5–6, 158–61

ideal-type methodology 180
individualism: as an agenda item 39–43
vs. coordination 52–3, 192
and dynamics 178
and explanation 29–33
as an explanatory problem 37–9
vs. holism 28–9, 36
as Inductivism 40–2
institutional 29, 32–3
methodological 28–33
psychologistic 30–2, 61–3
and rational expectations 74–5
as a research program 28–37
reductive 30–2, 48
in the short-run 176–87
induction: the problem of 14–16
the problem with 16–17
Inductivism: vs. Conventionalism 18–20
and Keynes 93–4
and the positive/normative distinction 4, 15–17, 142
and the Problem of Induction 14
remnants of 25–6
information: conventionalist theory of 70–1
economics of 71–2
institutions: and the aims of individuals 36–7
in economics 82–5
and information 58–9
problem of social 49–50
see also price-system
Instrumentalism: and choice-problems 192–3
vs. Conventionalism 146–8
and the Conventionalist critique 150–2, 180–1
vs. Pragmatism 145
and the usefulness of logic 143–5

Justificationism: defined 14
and dynamics 177
and the Problem of Induction 14

Keynesian 'counter-revolution' 80, 92–3
knowledge: Conventionalist theory of 70–1
and decision-making 176
economics of 71–2
and expectations 67–71
and long-run equilibria 67–9
objective theoretical 178–80
role of 180–4

learning: Conventionalist theory of 69
Inductivist theory of 69
see also Popper's view of methodology
logic: approximate modus ponens 124, 149
axioms of 138
excluded middle 124–5, 129, 138–9
modus ponens 124, 144–5, 149
modus tollens 83, 120, 124, 126–7, 145, 150

macroeconomics: as a Conventionalist construct 88–90
as Keynes' 'departure' 82–4
material conditional 138–9
methodology: problem-dependent 196
as research agenda 6–9
role of 196
the study of 1–6
vs. techniques 4–6
and textbooks 4–6
methodologists, liberal vs. conservative, *see* Conventionalism
microfoundations: and aggregative economics 84
the problem of 85–6
model-building: analytical 132–4
logical problem of analytical models 137–9
and tautologies 132–4
for testing theories 119–27
see also stochasticism, general equilibrium *and* falsifiability

paradigm and research programs 7–8
Popper-Agassi version of methodological individualism 36
Popper-Hayek program for explaining dynamics 178–80
Popper's view of methodology (and science): anti-Justification 166–7, 178
anti-psychologism 178
Conventionalists version of 172–3
degrees of corroboration 170–1
demarcation problem 169–70
and Friedman's methodology 171–2
and growth of knowledge 171
misappropriation of 164–5
and Socratic learning 167–9
positive economics, problem of 130–1
post-Keynesian economics 106–7, 127
Pragmatism: vs. Conventionalism 142–3
vs. Instrumentalism 145
price system: as a coordination institution 51
and psychologistic individualism 49–50
as a social institution 50–2
Psychologism: and Conventionalism 42–3
defined 30
and equilibrium 53–4
and Human Nature 33–4
vs. imperfect competition 61–4
and Inductivism in the long-run 39
and Keynes 93–4
and long-run equilibrium 59–64
in the short-run 64–5
simple 33–4
sophisticated 34–5
and the world of Adam Smith 54–9

rational expectations: vs. adaptative expectations 76–7
and Individualism 74–5
and learning theory 76
and the Problem of Conventions 73–4
role of 73–5

sequence of models, *see* Conventionalism
simplicity: and Conventionalism 22, 146–7
and Instrumentalism 21, 147–8
vs. generality, *see* generality
skepticism 168
Socratic learning theory, *see* Popper's view of methodology
stochasticism: logical problem of 121, 123–5
nature of 122–3
problem with 122–7
and stochastic models 122–7
and testing 125–7

tautologies, *see* model-building
testing: with models 119–27
with stochasticism 125–7
testability, *see* falsifiabilty
time: economics of 99–100
and logic 102–4
and knowledge 105–7
and liquidity preference 107–11
in neoclassical models 97–8, 190–1, 193
real vs. the long run 102, 164, 194–5

verifiability, *see* falsifiability
